# Number Station News

E07 English Man:- High levels of “full message” transmissions from schedules running in the UK evening time – including the Thursday 2010 UTC start, which came to life in April of this year after many months of “no message” format, likewise the weekend 0600 UTC start E07 SSB schedule has been sending “full message” traffic.

E06 English Man:- The Thursday 2030 UTC and Friday 2130 UTC schedules have continued to appear with the message of fifty-two 5F groups and a Decode Key of “149” first heard in the autumn of 2016, although messages with group counts of sixty-two and sixty-eight had been transmitted in May of this year. Likewise the related Thursday 1830 UTC and Friday 1930 UTC G06 German YL schedules in July and August have continued to show up with the same “149...52” message, in the German language, of course. An E06 with the call “832” appeared on Saturday 12-August at 1100 UTC with a repeat on the following day.

Loggings of HM01 from Cuba have been few and far between over the last few months, just a few occasions on the days when 9,330 and 9,065 kHz are used in the UK morning time have given readable signals.

## **RAF VOLMET - Brief Appearance on 8005kHz**

Not a number station but possibly interesting:- The artist formerly known as “RAF VOLMET” showed up on a new frequency for just a short time at the start of August:-

01-Aug-17, Tuesday:- 1912 UTC, 8005 kHz, while idly tuning around the short-waves, as you do, the S-meter swung upwards as the frequency readout passed the bottom of the 8 MHz band under the influence of a strong SSB signal which when tuned in turned out to be the same station which can be heard on 5450 kHz with weather information for various airfields. At one time it used a female voice speaking slowly and clearly and identifying with the “Royal Air Force” call at intervals. The style of operation changed to a different YL voice some time ago with a much more rapid delivery of the information. So fast it is difficult to imagine that Biggles and Ginger could write down the relevant details if they needed to - slow down dear, you'll do yourself a mischief - and the identification is also spoken just as fast, sounds like “This is One Time (something) Military Broadcast”.

It seemed like this was a new frequency added to the several others which this station uses, something of interest to those of us who follow matters both meteorological and aeronautical, but there was no sign of it on the next occasion 8005 kHz was dialed up, on Thursday 03-August, and has not been heard since on this frequency. Bit of a puzzle as to what was going on there.

# Morse Stations

All frequencies listed in kHz. Freqs are generally +- 1k

This is a representative sample of the logs received, giving an indication of station behaviour and the range of times/freqs heard. These need to be read in conjunction with any other articles/charts/comments appended to this issue.

## Morse - Number Stations

**M01/3** XIV MCW, hand (025 sched for May - Aug). Will change to M01/2 sched ID 463 for Sept - Oct.

### **Format Change**

A new format for the M01 scheduled messages is being used with increasing frequency of late, although it has been seen on the odd occasion previously. This format varies from that traditionally used in that the decode key & group count are separated by an oblique stroke & the use of the double-dash is omitted. In addition, the DK/GC is sent once only at the end of the message.

Here are examples of both formats currently in use:-

| M01 4905kHz 2000z 22 August 2017  |  |  |  |  |  |  |
|---|--|--|--|--|--|--|
| 025 (R4m) 547 547 30 30 ==  |  |  |  |  |  |  |

**M01a** (From Feb 2016 M01a has been redefined to cover all M01 variants - excepting M01b)

#### Logs from Edd Smith

Edd, (E.SMITH) managed to log a large quantity of M01a transmissions between the 03 July & 20 July, with a burst of activity particularly noted between 11 - 20 July for which he has supplied high quality logs backed by recordings.

This is the first time we have been able to study this quantity of M01a logs, which are of particular interest as they were all gathered within a short period of time. For this reason, we are presenting the logs complete, in chronological order, which as well as being a record of recent activity, also presents an opportunity to preserve an excellent set of examples of M01a.

This unusual level of activity happens to coincide with a planned joint exercise carried out in the Baltic Sea between Chinese & Russian naval forces. Edd has previously suggested that these M01a transmissions may originate from Kaliningrad & this increased activity in transmissions - which has also been noted by Jean-Paul (JPL) with the Chinese M89 stations, does go a long way to support this.

Edd is also monitoring these transmissions via an on-line SDR at Silec at excellent strength - Silec is only 87Km (55 miles), from Kaliningrad.

This link to a Bloomberg article supplied by Edd Smith.

<https://www.bloomberg.com/news/articles/2017-07-25/russia-and-china-hold-first-joint-naval-exercises-in-baltic-sea>

Of particular interest are the two messages sent on 5347kHz on 13 July, which appear to be blatantly false, although some attempt appears to have been made with the second of the two messages.

It is believed that these transmissions are two-way exchanges as pauses, unfinished groups & repeats or part repeats are usually found within these transmissions. These exchanges are undoubtedly operated in duplex mode, with the remote station on a different frequency, although to date none of these remote stations have been logged.

As an example, the 5473kHz transmission on 20 July starts with 111 999 followed by 999 & a further 999 with a pause between each of the phrases. Then follows a 10 group message, a further pause before sending 111 020 = 03 09. The operator then proceeds to send groups 03 to 09 of the previously sent message, which would indicate that following the sending of the message & during the pause the remote station requested a repeat sending of those groups.

Here are the two phrases discussed above;

303 10 = 95021 33034 77079 18438 39358 83897 02907 39909 43897 95481 = 303 10 000

111 020 = 03 09 = 77079 18438 39358 83897 02907 39909 43897 000      [Note this is a repeat of grp 03-09]

The blank lines in the logs represent a pause of variable length, typically ranging from around 10 to 60 seconds. Edd has done an excellent job of capturing & recording these transmissions - which is very much appreciated.

## M01a Logs

**M08a XVIII ICW / CW, some MCW**

Our M08a report courtesy of AnonUS in America.

M08a has continued to appear but unfortunately has been very sporadic. The beginning of August started strongly with transmissions heard for the first 5 days leading to the hope that things were returning to normal, unfortunately nothing was heard for the rest of the month.

The transmitters are still brought online most days with the characteristic hum being of note. When heard the transmissions were coming up approximately 5 minutes before the start of the hour.

## Morse Stations - Not Number Related

### M51 XIX

3881//6825      Usual unscheduled & random continuous transmissions heard throughout January & February, often ceasing just before, or commencing shortly after the daily M51a transmissions. These seem to be almost continuously transmitted on these two frequencies now.

These logs sent in by 'E'

### M89 O

This is a summary of activity from the M89 stations.

During July activity suggested that a possible major exercise was taking place. On 17 July, during the period 1500z, 4 & 5 kHz bands full of M89 station. Lots of exercise activity also logged over 27 July & 29 July.

#### **Number Message**

Jean-Paul, (JPL), logged this message on 13 August. Unusually for M89, the message consisted of 20 five-figure number groups. Most of the messages from this network use the four-figure cut number format.

#### **E06 Logs from PoSW:-**

##### First + Third Thursdays in the Month 2030 UTC Schedule:-

6-July-17:- 5,953 kHz, calling "724", DK/GC "149 149 52 52", the message first used in the autumn of last year and which has appeared many times on both E06 and G06 in their respective languages. Strong broadcast station on 5,950, the worst effects removed by using the receiver in USB mode.

20-July-17:- 5,934 kHz, "724" and "149 149 52 52" again, S9 signal.

3-Aug-17:- 5,935 kHz, continues in August with "724" and, "149 149 52 52".

Call-up in progress when tuned in a couple of seconds before the half-hour, into 5Fs at approx 2033 UTC.

##### Friday 2130 UTC Schedule Following First + Third Thursdays in the Month:-

7-July-17: 5,731 kHz, Started about 7 seconds before the half-hour, call "315", DK/GC "149 149 52 52", that well-used message of fifty-two 5F groups. Over S9, ended approx 2142:30s UTC.

That computer-related "chime", which no doubt those who know about this stuff would describe as "XP shut down" heard after 2143 UTC followed by hum; bad ground connection somewhere, perhaps!

21-July-17:- 5,731 kHz, "315" and "149 149 52 52", S9.

4-Aug-17:- 5,731 kHz, "315" and of course, "149 149 52 52", S9 signal.

##### Return of a Saturday E06:-

12-Aug-17:- 1101 UTC, 16,153 kHz, E06 calling "832", then DK/GC "951 951 64 64",  
 S9 signal, ended around 1115 UTC. An E06 with this call had been noted earlier this year on Saturday 15-April. A search for a repeat at 1200 UTC on a lower frequency, expected to be between one and two MHz lower proved fruitless.

13-Aug-17, Sunday:- 1100 UTC, 16,153 kHz, a "next day repeat", peaking S9 with occasional fading down to a much weaker signal for a second or two. In expectation of this a receiver had been parked on 16,153; carrier with tone noted at 1042 UTC and a single spoken "832" at 1044.  
 After the transmission ended at about a quarter past the hour the carrier stayed up until after 1126 UTC.

1200 UTC, 14,438 kHz, the second sending, a much weaker signal, indicating S4 at best, presumably was also on this frequency yesterday.

It seemed likely that this one was going to show up on Saturday 26-August-17 because there was a strong carrier up on 16,153 at around 1055 UTC, but when checked again just after the hour there was some kind of wide-shift FSK data signal, not the sound of the rather sad and depressed sounding E06 O.M.

#### **E07**

##### **PoSW's E07 Logs**

As expected, the E07 schedules which appear in the UK evening time continue to use the same frequencies as in the same month in past years – including the Monday + Wednesday 1900 UTC start SSB schedule, which made the changeover from AM to SSB in June of last year.

Sunday + Wednesday Schedule, 1700 UTC Start:-

2-July-17, Sunday:-

1700 UTC, 13,898 kHz, "817 817 817 1", DK/GC "497 122" x 2, weak signal, difficult copy.  
1720 UTC, 12,198 kHz, second sending, much stronger signal, peaking S9, came up to S9+ after a few minutes.  
1740 UTC, 10,798 kHz, third sending, also over S9.

9-July-17, Sunday:-

1700 UTC, 13,898 kHz, weak signal, difficult to hear, could tell it was "full message".  
1720 UTC, 12,198 kHz, second sending, much stronger, over S9, DK/GC "216 74" x 2.  
1740 UTC, 10,798 kHz, third sending, S9 with QSB.

12-July-17, Wednesday:-

1700 UTC, 13,898 kHz, "817" and "216 74" again, much better signal than on the 9<sup>th</sup>, S8 with better than usual audio.  
1720 UTC, 12,198 kHz, second sending, S9+.  
1740 UTC, 10,798 kHz, third sending, S8 with deep QSB.

19-July-17, Wednesday:-

1720 UTC, 12,198 kHz – 1700z sending was very weak, - "817 817 817 1", DK/GC "506 71" x 2, over S9.  
1740 UTC, 10,798 kHz, third sending, S9 with QSB.

23-July-17, Sunday:-

1700 UTC, 13,898 kHz, "506 71" again, a better signal than on the 19<sup>th</sup>, S9 with QSB, audio low but readable.  
1720 UTC, 12,198 kHz, second sending, S9, audio somewhat better than first sending.  
1740 UTC, 10,798 kHz, third sending, weaker.

2-Aug-17, Wednesday:-

1700 UTC, 13,881 kHz, weak signal, unreadable, carrier went QRT around 1702:30s UTC which can only mean, "no message".  
1720 UTC, 12,181 kHz, second sending a much better signal, S9 with reasonable audio, "818 818 818 000".

6-Aug-17, Sunday:-

1706 UTC, 13,881 kHz, transmission in progress, missed start, "full message", S9 with reasonable audio, ended after 1711 UTC.  
1720 UTC, 12,181 kHz, "818 818 818 1", DK/GC "765 60" x 2, started off S9 then became weaker.  
1740 UTC, 10,881 kHz, third sending, S9 with QSB.

16-Aug-17, Wednesday:-

1700 UTC, 13,881 kHz, very weak signal, unreadable.  
1720 UTC, 12,181 kHz, second sending, much better signal, S9, DK/GC "765 60", same as on the 6<sup>th</sup>.  
1740 UTC, 10,881 kHz, over S9 with QSB.

Thursday Schedule, 2010 UTC Start:-

6-July-17:-

2010 UTC, 11,539 kHz, "553 553 553 1" for a full message; this Thursday schedule started sending traffic earlier this year after many months of "no message" format. DK/GC "458 73" x 2. Heterodyne from a strong carrier on 11,540, presumably a broadcast station warming the TX up. Copy best with the receiver in LSB mode. Audio clipped at times, especially on the first spoken "five" of the "553" routine.  
2030 UTC, 10,547 kHz, second sending, S9 with reasonable audio.  
2050 UTC, 9,388 kHz, third sending, strong broadcast station on 9,390, best copy in LSB mode.

13-July-17:-

2010 UTC, 11,539 kHz, "458 73" again, S9 with reasonable audio, no carrier on 11,540 this evening to spoil things.  
2030 UTC, 10,547 kHz, over S9.  
2050 UTC, 9,388 kHz, the broadcaster on 9,390 very strong.

20-July-17:-

2030 UTC, 10,547 kHz, second sending, "553 553 553 000", S9 with deep QSB.

27-July-17:-

2010 UTC, 11,539 kHz, "553 553 553 1" for a "full message", DK/GC "778 87" x 2, S9 with reasonable audio.  
2030 UTC, 10,547 kHz, S9.  
2050 UTC, 9,388 kHz, reasonable copy with the receiver in LSB mode to reduce the effect of the strong BC station on 9,390.

3-Aug-17:-

2010 UTC, 10,753 kHz, "716 716 716 000", S9, audio low.  
2030 UTC, 9,147 kHz, also S9 with low audio.

10-Aug-17:-

2010 UTC, 10,753 kHz, "716 716 716 1", full message, DK/GC "716 58" x 2, the "Decode Key" - if that is what it is - same as the call; do we think there is some significance in this? Also, noted an extra spoken "1" tacked on after the second rendering of the "58" group count; perhaps the apparatus generating the message became confused in some way because the call and DK were the same. S9 signal with QSB.  
2030 UTC, 9,147 kHz second sending, and 2050 UTC, 7,637 kHz, third sending, both weaker signals than the 2010z transmission.

24-Aug-17:-

2010 UTC, 10,753 kHz, and 2030 UTC, 9,147 kHz, both S9 with reasonable audio, "716 716 716 000".

Monday + Wednesday SSB Schedule, 1900 UTC Start:-

3-July-17, Monday:-

1900 UTC, 16,263 kHz, "273 273 273 1", DK/GC "696 91" x 2, weak signal.  
1920 UTC, 14,763 kHz, second sending, much stronger signal, S8. Looks like the same message as on 26-June.  
1940 UTC, 13,363 kHz, third sending, also S8.

5-July-17, Wednesday:-

1900 UTC, 16,263 kHz, "273" and "696 91" again, weak signal.  
1920 UTC, 14,763 kHz, second sending, also weak.  
1940 UTC, 13,363 kHz, by far the best sending of the three, S8.

12-July-17, Wednesday:-

1900 UTC, 16,263 kHz, still with the same "696 91" message, very weak signal.  
1920 UTC, 14,673 kHz, second sending, S5 to S6.  
1940 UTC, 13,363 kHz, the strongest, S8.

24-July-17, Monday:-

1900 UTC, 16,263 kHz, "273 273 273 000", very weak signal, only just readable.  
1920 UTC, 14,763 kHz, also weak.

26-July-17, Wednesday:-

1900 UTC, 16,262 kHz, "273 273 273 000", weak signal.  
1920 UTC, 14,763 kHz, second sending, much stronger, up to S7.

2-Aug-17, Wednesday:-

1900 UTC, 16,147 kHz, "164 163 164 000", weak signal.  
1920 UTC, 14,647 kHz, second sending, much stronger, S7 to S8.

7-Aug-17, Monday:-

1900 UTC, 16,147 kHz, "164 164 164 1", DK/GC "678 83" x 2, S8 to S9, unusually strong signal.  
1920 UTC, 14,647 kHz, second sending, peaking over S9.  
1940 UTC, 13,447 kHz, third sending, peaking S9.

9-Aug-17, Wednesday:-

1900 UTC, 16,147 kHz, "164" and "678 83" again, over S9.  
1920 UTC, 14,647 kHz, second sending, slightly weaker.  
1940 UTC, 13,447 kHz, third sending, S8 to S9.

16-Aug-17, Wednesday:-

1900 UTC, 16,147 kHz, still up with "678 83", S8 SSB signal.  
1920 UTC, 14,647 kHz, and 1940 UTC, 13,447 kHz, both peaking over S9.

21-Aug-17, Monday:-

1900 UTC, 16,147 kHz, "164" and "678 83" - still. Over S9 SSB signal.  
1920 UTC, 14,647 kHz, and 1940 UTC, 13,447 kHz, repeats, both S8 to S9.

#### Saturday + Sunday SSB Schedule, 0600 UTC Start:-

1-July-17, Saturday:-

0600 UTC, 9,064 kHz, "024 024 024 000", S7 to S8.  
0620 UTC, 10,264 kHz, second sending, also S8, same frequencies as in May and June, then.

2-July-17, Sunday:-

0600 UTC, 9,064 kHz, "024 024 024 000".

8-July-17, Saturday:-

060 UTC, 9,064 kHz, "024 024 024 1" for a "full message", DK/GC "327 74" x 2, S8 at first, rapidly came up to over S9.  
0620 UTC, 10,264 kHz, second sending, over S9.  
0640 UTC, 11,464 kHz, third sending, S9+, very strong signal.

9-July-17, Sunday:-

0600 UTC, 9,064 kHz, "024" and "327 74", as yesterday, S9.  
0620 UTC, 10,624 kHz, second sending, very strong S9+.  
0640 UTC, 11,464 kHz, also S9+.

15-July-17, Saturday:-

0600 UTC, 9,064 kHz, "327 74" again, as heard last weekend.  
0620 UTC, 10,264 kHz, and 0640 UTC, 11,464 kHz, the strongest signal of the three transmissions.

22-July-17, Saturday:-

0600 UTC, 9,064 kHz, "024 024 024 1", DK/GC "533 47" x 2, peaking S9.  
0620 UTC, 10,264 kHz, second sending, S7 to S8 at first but propagation must have been rapidly changing because the signal became weaker  
after a couple of minutes into the transmission and at the same time a STANAG, whatever it is, "XJT" came up out of nowhere, has been  
noted on this second sending in the past, and was pushing the S-meter well over the 9 by the time E07 finished after 0627 UTC.  
0640 UTC, 11,464 kHz, third sending, up to S9.

23-July-17, Sunday:-

0600 UTC, 9,064 kHz, "533 47" again, as yesterday, indicating around S7.  
0620 UTC, 10,264 kHz, second sending, also S7, no sign of the noise-maker which appeared on this sending yesterday.  
0640 UTC, 11,464 kHz, third sending, the strongest, S9.

5-Aug-17, Saturday:-

0600 UTC, 9,064 kHz, "024 024 024 1", DK/GC "533 47" x 2, same message as first heard on 22-July, must be important! Over S9 SSB signal.  
0620 UTC, 10,264 kHz, and 0640 UTC, 11,464 kHz, the repeats, both also over S9.

6-Aug-17, Sunday:-

0600 UTC, 9,064 kHz, "024" and "533 47" again.  
0620 UTC, 10,264 kHz, and 0640 UTC, 11,464 kHz, the repeats, all three transmissions peaking over S9.

12-Aug-17, Saturday:-

0600 UTC, 9,064 kHz, "024" and still sending, "533 47", S8 to S9.

0620 UTC, 10,264 kHz, S8, and 0640 UTC, 11,464 kHz, over S9, the repeats.

27-Aug-17, Sunday:-

0600 UTC, 9,064 kHz, "024 024 024 1", DK/GC "435 38" x 2, S8.

0620 UTC, 10,264 kHz, second sending, the "XJT" noise-maker churning away on this frequency again, E07 mostly winning the contest.  
0640 UTC, 11,464 kHz, S8.

#### PoSW's take on E07a

##### Saturday Schedule, 0800 UTC Start:-

1-July-17:-

0800 UTC, 12,173 kHz, "198 198 198 000", S5.  
 0820 UTC, 13,973 kHz, second sending, also about S5.

8-July-17:-

0800 UTC, 12,173 kHz, and 0820 UTC, 13,973 kHz, both S7, "198 198 198 000"

15-July-17:-

0800 UTC, 12,173 kHz, "198 198 198 000", S7.  
0820 UTC, 13,973 kHz, second sending, much weaker signal.

22-July-17:-

0800 UTC, 12,173 kHz, "198 198 198 000", signal up and down, very weak to an indicated S8.  
0820 UTC, 13,973 kHz, second sending, weak signal.

5-Aug-17:-

0800 UTC, 12,177 kHz, "148 148 148 000", S8 signal.  
0820 UTC, 13,477 kHz, second sending, slightly weaker.

12-Aug-17:-

0800 UTC, 12,177 kHz, and 0820 UTC, 13,477 kHz, weaker, "148 148 148 000".

26-Aug-17:-

0800 UTC, 12,177 kHz, "148 148 148 000", S7.  
0820 UTC, 13,477 kHz, second sending, peaking S7 but fading down to a much weaker signal at times. This schedule has settled into a "no message" rut in much the same way that the Thursday 2010 UTC E07 schedule did for some considerable time. One is usually in a position to monitor this 9 o'clock of a Saturday morning appearance and although a few weeks have been missed a quick trawl through the log books suggests the last time a "full message" was heard was on Saturday 16-April-2016.

#### Wednesday Schedule, 2000 UTC Start:-

5-July-17:-

2000 UTC, 12,166 kHz, "172 172 172 000", S9+, very strong SSB signal.  
2020 UTC, 10,766 kHz, also S9+.

12-July-17:-

2000 UTC, 12,166 kHz, "172 172 172 1 65248" for a full message, DK/GC "8960 31" x 2, over S9.  
2020 UTC, 10,766 kHz, and 2040 UTC, 9,266 kHz, repeats, both over S9.

26-July-17:-

2000 UTC, 12,166 kHz, "172 172 172 000", S9+.

2-Aug-17:-

2000 UTC, 12,166 kHz, "172 172 172 000", S9+.

9-Aug-17:-

2000 UTC, 12,166 kHz, and 2020 UTC, 10,766 kHz, both S9+, "172 172 172 000".

Here is tiNG's log on this transmission;

Expecting the transmission at 1700z on 5471kHz I heard "Magdeburg Annie" calling on 5470kHz (111 111 111 000) for several times at around 1635z. After Annie stopped she was on 5469kHz a minute later with the same. Stopping and another minute later she was on 5468 and, the same, finally on 5467kHz. After a few turns of "111 111 111 000" she went silent again and some Windows XP sounds appeared. The carrier stayed on 5467,0 with a slight humm in the background. Signal strength only on an amount of S3-4.

## **G06 Logs from PosW**

### Second + Fourth Thursdays in the Month 1830 UTC Schedule:-

13-July-17:- 6,887 kHz, started about fifteen seconds before the half hour, call “842”, DK/GC “149 149 52 52”, the message which first appeared in October of last year. Signal strength up and down during the transmission, sometimes up to S9 and then sinking into the noise. Ended after 1842 UTC, computer related chimes heard at around 1846:30s UTC followed by hum for a couple of minutes.

27-July-17:- 6,887 kHz, “842” and “149 149 52 52”, S9 signal.

24-Aug-17:- 6,884 kHz, slightly lower in frequency than usual, “842” and “149 149 52 52”, S9 signal, ended around 1843 UTC, computer shut-down musical notes at 1844:10s followed by audio hum, carrier off 1846 UTC.

### Friday 1930 UTC Schedule Following Second + Fourth Thursdays.

14-July-17:- 5,935 kHz, call “218”, DK/GC “149 149 52 52”, strong signal on a quiet spot inside the 49 metre broadcast band.

25-Aug-17:- 5,933 kHz, “218” and “149 149 52 52” - still! S9 with rapid QSB.

### First + Second Mondays in the Month 1700 + 1800 UTC Schedule:-

3-July-17:- 1800 UTC 5,764 kHz, “563 563 563 00000”. Unable to find a transmission at 1700z, but subsequent study of the prediction list in En101 suggests 5,471.

10-July-17:- 1700 UTC, 5,466 kHz, not too far from the predicted frequency, “563 563 563 00000”.  
 1800 UTC, 5,764 kHz, second sending, started about ten seconds before the hour.

7-Aug-17:- 1659 UTC, 5,471 kHz, “563 563 563 00000”, weak signal competing with local interference.  
 1759 UTC, just before, 5,756 kHz, second sending, much stronger signal, S9.

| <b>S06s July log:</b>   |                   |   |   |                        |
| ID 438 found sending nulls on Monday 17th at 0600z on 9960khz, then at 0610z on 11130kHz, 0620z 12215kHz, 0630z 13430kHz, 0640z 14930kHz and 0650z on 16325kHz. Sendings continued daily but stopped by the weekend. Frequencies returned to the normal schedule the following week sending a null message. Guess it will send messages again at the beginning of August? |                   |   |   |                        |

### PoSW S06/S06s Logs

Only two regular S06 Russian Man schedules to be heard in the UK evening time.

#### First + Third Fridays in the Month 2000 + 2100 UTC:-

7-July-17:- 2100 UTC, 7,951 kHz, “514 514 514 00000”, S8 to S9, second sending, same frequency as in May and June, missed first transmission at 2000z, probably on 9,943 kHz, plus or minus.

21-July-17:- 2000 UTC, 9,948 kHz, “514 514 514 00000”, peaking S8 to S9.  
2100 UTC, 7,951 kHz, second sending, slightly weaker signal.

In the month of August this schedule performed the stunt for which it is famous, it shifted by one hour, not entirely unexpected:-

4-Aug-17:- 1900 UTC, 9,948 kHz, “514 514 514 00000”, indicating around a “7” on the S-meter.  
2000 UTC, 7,951 kHz, over S9.

#### First + Third Saturdays in the Month 1900 + 2000 UTC Schedule:-

15-July-17:- 1900 UTC, 6,801 kHz, “913 913 913 00000”, S6 to S7.  
2000 UTC, 5,931 kHz, second sending, stronger signal, over S9.

5-Aug-17:- 1900 UTC, 6,801 kHz, “913 913 913 00000”, S9+.  
2000 UTC, 5,931 kHz, over S9.

### **S06s, YL voice, schedules heard in the UK with reasonable signals:-**

#### Monday 0830 + 0840 UTC Schedule, Call “371”:-

17-July-17:- 0830 UTC, 8,221 kHz, DK/GC “206 206 5 5”, “84090 09531 88430 33240 61135”, S7.  
0840 UTC, 9,353 kHz, weak signal.

14-Aug-17:- 0830 UTC, 8,221 kHz, DK/GC “265 265 8 8”, “36628 32225 30867 46980 48995 40333 43389 30419”, S8 with QSB. Nothing heard at 0840z on 9,353.

21-Aug-17:- 0830 UTC, 8,221 kHz, DK/GC “450 450 6 6”, “10107 60562 48015 36417 12362 84620”.  
0840 UTC, 9,353 kHz, no problem copying the second sending this morning.

#### Monday 1200 + 1210 UTC Schedule, Call “831”:-

17-July-17:- Nothing heard of the 1200z predicted frequency 10,230 kHz, but the second sending heard:-  
1210 UTC, 12,165 kHz, DK/GC “426 426 5 5”, “10544 98003 68909 45279 53006”, weak at first but came up to S7.

#### Tuesday 0730 + 0740 UTC Schedule, Call “427”:-

4-July-17:- 0730 UTC, 7,365 kHz, DK/GC “890 890 5 5”, “06022 32634 34661 47592 46281”, S8 over-riding a weaker broadcast station.  
0740 UTC, 11,655 kHz, second sending, S9.

18-July-17:- 0730 UTC, 7,365 kHz, DK/GC “908 908 5 5”, “65805 66610 20336 17301 88554”, competing with the BC station on the same frequency.

0740 UTC, 11,655 kHz, second sending, over S9, a distinct pause noted between the “2” and “0” of 5F group number three when spoken for the second time, not noted on the 0730z sending.

25-July-17:- 0730 UTC, 7,365 kHz, DK/GC “908 908 5 5”, 5Fs as on the 18<sup>th</sup>. S8, over-riding the weaker broadcast station.  
0740 UTC, 11,655 kHz, second sending, S9 with QSB.

8-Aug-17:- 0740 UTC, 11,655 kHz, missed 0730z sending, DK/GC “809 809 5 5”, “10544 98003 68909 45279 43828”, over S9.

## V07

V07 has moved to new frequencies - but not far from those previously used! It has also changed to a new voice.

In August V07 appeared to be missing. This from Token:-

It appears that V07 is using the same schedule and call-up for August, 2017, as it did for July, 2017. Normally V07 changes freqs and times, moving forward 2 hours to 0500/0520/0540z in August, but this month it has stayed on the 0700/0720/0740z schedule.

For the *[first two weeks of August]* it has been active at 0700z on 13563 kHz, USB, at 0720z on 12163 kHz, USB, and at 0740z on 10263 kHz, USB, on its regular Sunday morning. *Thanks T!*

## Sunday

### July 2017

| 0700z | 13563 | 0720z   | 12163 | 0740z             | 10263kHz (Change of Frequencies - previously used 13582kHz / 12182kHz) |
|-------|-------|---------|-------|-------------------|--|
| 02/07 |       | 512 000 |       |                   | Via Japan remote   |
| 09/07 |       | 512 000 |       | [NRH On 12163kHz] | Via Japan remote   |

This was Token's log of the 09 July transmissions, with a weak repeat noted at 0724z;  
 13563 09-07-2017 0700 V07 USB 512 512 512 000  
 12163 09-07-2017 0720 V07 USB 512 512 512 000  
 12163 09-07-2017 0724 V07 USB 512 512 512 000

Note the repeat on 12163 kHz at 0724z. This was also at a significantly lower power level, so not sure what was going on there.  
 The 0720z TX was S9 or a little over, the 0724 was S7 and lower. The voice has changed as of last week. It sounds fuller and the tempo has been sped up a bit.

16/07 512 000 Via Japan remote

## Hybrids

### HM01

HM01 has continued on the same schedules and frequencies over the past two months. Some days were missed over the period due to recording problems. Windows XP dings seem to be becoming more common with them being heard on various occasions during the call-ups.

Several call-ups with 9s in were heard, these have been rare of late and always seem to appear on the 2100z schedule with the call-up ending with 0 then incrementing to 1 on the following day.

The other item of note was the appearance of the same call-up twice on 14/7 with 0622 being seen in the 4<sup>th</sup> and 5<sup>th</sup> positions the transmitted text files were different however. On 15/7 the call-ups went out of sequence with some reverting backwards but call-up 2 incrementing +1

Four files not ending in .txt were transmitted 36226753.F1G 36168215.F1G 36306682.F1G 50235157.F1C 50162686.F1C, as always names of files with F1C extensions begin 50 and those with .F1G start with 36.

#### **PoSW's analysis of signals heard in Great Britain:**

Signals from the Cuban Mixed Mode station still being heard in the UK morning time, but only on the four days of the week when frequencies in the 9 and 10 MHz band are used.

3-July-17, Monday:- 0600 UTC, 10,345 kHz, call-up routine in progress when tuned in, "76127 48762 06621 10843 51773 14054". S7 to S8 with the usual deep fading up and down, data noise started at 0602 UTC.

5-July-17, Wednesday:- 0558:35s UTC, 10,345 kHz, "76127 48762 06621 10843 51773 14054", same as on Monday, data at 0601:55s UTC.

7-July-17, Friday:- 0600 UTC, 10,345 kHz, in progress with, "86670 48763 06221 10844 51774 14055", S9 with QSB, audio seemed lower than usual, data at 0601:55s UTC.

9-July-17, Sunday:- 0628:30s UTC, 10,345 kHz, starting up after the break with, "86673 48765 06623 10846 51776 14057", over S9 with good audio, data at 0631:55s UTC.

0709 UTC, 9,330 kHz, transmission in progress, 5Fs as earlier, S9 with QSB, stopped for the break after 0719z when the signal was becoming weaker.

Signals from this station went into a bit of a decline for over a fortnight; it was possible to confirm that HM01 was there but unable to make out the 5Fs.

26-July-17, Wednesday:- 0559 UTC, 10,345 kHz, call-up in progress when tuned in, weak but just about readable, "90248 61843 58101 82856 82154 11586". Data at 0601:40s UTC.

6-Aug-17, Sunday:- 0729 UTC, 9,330 kHz, call-up after the break, S7 with deep QSB always at the most inconvenient moments, "37636 80182 58107 02805 38302 27094", copy not too clear but was surprised to hear anything at all because there was no sign of HM01 on 10,345 when checked just after 0600 UTC; this is usually the best frequency on which to catch this one. Data noise started at 0731:34s UTC.

7-Aug-17, Monday:- 0558 UTC, 10,345 kHz, weak signal, unreadable.

0736 UTC, 9,330 kHz, last few minutes of a transmission, peaking S8 with the usual deep fading, heard 5Fs, "37637 80183 66821 02806 38303 27095". Stopped just before 0749 UTC, carrier went off around 0751.

14-Aug-17, Monday:- 0744 UTC, 9,330 kHz, last few minutes, 5Fs "55807 32252 66828 33346 78611 53776", S9 with the usual deep fading up and down. Voice stopped after 0748 UTC, carrier QRT before 0750.

0758:6s UTC, 9,065 kHz, starting up, 5Fs as earlier, weaker signal than on 9,330, S5 to S6.

16-Aug-17, Wednesday:- 0728 UTC, 9,330 kHz, "51571 32255 01661 55780 78614 53779", weak signal, copy not too clear.

### **HM02 - Believed variant of Russian Family 1. Station under investigation**

Consists of a short FSK sequence that contains no data, possibly a tuning signal, followed by a message in FSK Morse. Changes times with daylight saving.

#### **HM02 is Back - Using High Speed FSK Morse**

The last transmission heard, on 09 June 2017, started as normal but after the first five groups, went into a high speed Morse mode that continued for the rest of the transmission. Ary, (AB), found the station reactivated on 7761kHz at 0600z - Still using this high speed Morse FSK mode, which appears to be the new format of the station & not an error, as was hoped!

Speed of the FSK Morse is around 40 WPM. Since its re-appearance, apart from eleven days at the end of July & the beginning of August, the station has appeared irregularly, with odd days & longer periods where a number of days, have passed with no transmission. The last message heard was on Wednesday 23 August.

**Schedule:** Does not appear to follow a regular yearly frequency schedule - Frequency appears to be chosen to suit current conditions

**Latest: Daily: 7761kHz 0600z Found by Ary, (AB) on 25 July 2017 - Using fast FSK Morse at 40 WPM**

**Previous frequencies used:- 4761kHz, 6261kHz & 7351kHz. Time schedules varied from 0410, 0420, 0440z & 0520z**

## FSK by Danix

### F01

Not much to report here. The usual low traffic schedules are still sending null messages only.

Links 00116 & 00117 are based in Cuba, rather than Russia. More links have been heard from there in recent years, but only these two are seen on regular schedules. Unfortunately, I receive very few logs of those.

#### **F06**

In July, two presumed exercise schedules were found, running on even days of the month, and using link ID 00000. It appears to be an annual occurrence. On some days, a two-message format very similar to E06a and S06b was used.

### F06a

The F06 modem is actually used for two different kinds of payloads. The one labeled *F06* is a custom compressed 5FG format, and is the one used on all regular schedules. *F06a*, however, sends named, uncompressed files instead; it has been heard only in rare unscheduled broadcasts.

Specifics of each format are described here:

<http://privom.org/number-stations/digital/f06/protocol>  
<http://privom.org/number-stations/digital/f06a>

While in theory this format could be used to carry any kind of file, in practice it has been used only for ASCII files containing 5FG's and 5LG's, 10 groups per line, preceded by the usual 5-group header. While 5FG's could be carried a lot more efficiently using the normal F06 format, 5LG's cannot be sent using it at all.

In this case, we caught a 5LG broadcast:

|       | <b>1220z</b>                           | <b>16346kHz</b>   |
|-------|--|---|
| 03/07 | <b><u>10075~1.TXT (1857 bytes)</u></b> | <b><u>11100 10075 23654 01063 03009</u></b> TTPLU MVYGL RIBUD TLMGU GLCXG FDPVT PGIAK LNOTL RLWAK ... |

This format gives only 12 bytes for a filename. Longer names, as seen above, are abbreviated using the same format as the one the Microsoft Windows operating systems use to present long filenames to old MS-DOS programs. It's worth noting that the line endings in files use the Windows/DOS-specific 2-byte sequence, CRLF.

### Items of Interest in the Media:-

When I went up to picked up my copy of *The Times* on 05-July I noted several stories with links to the world of espionage, one of which had a local connection to my part of the world.

**Ivan wants his houses back:-** "Russia asks Trump to return its confiscated 'spy mansions'" is the headline on a short item by Tom Parfitt in Moscow:- "Russia is pushing for the return of two mansions allegedly used for spying in the United States as Presidents Putin and Trump prepare to meet for the first time this week. The leaders are set to discuss the wars in Syria and Ukraine when they meet on the side-lines of the G20 summit in Hamburg on Friday.

But the fate of the two 'spy mansions', a 14-acre Long Island estate called Norwich House and a Georgian-style house on the Corsica River in Maryland is also nosing its way on to the agenda. Barack Obama ordered the residences, used by Russian diplomats for relaxation and entertaining, to be confiscated in December. His administration said they had been used 'by Russian personnel for intelligence-related purposes'. The measure was part of US retaliation against Moscow for allegedly interfering in the US presidential election last year – 35 Russian diplomats were also expelled.

Mr Putin refused to react to Mr Obama's measures, saying he hoped for improved relations with Washington once Mr Trump was inaugurated. Mr Putin's spokesman, Dmitry Peskov, said on Monday that 'patience was running out' over Washington's refusal to hand back the residences. Russia could respond 'reciprocally' if they were not returned, he added. While relations are still strained, the two properties have been mooted as a possible olive branch for Mr Trump to offer when the leaders meet."

I like that expression "for relaxation and entertaining"; involving the services of high-class ladies who charge \$1,000 for an all-night use of their services, I'll bet.

**Company Man tells all:-** the second story from this edition of *The Times*, written by Hugh Tomlinson and Haroon Janjua, carries the headline, "CIA man's memoir sparks fury in Pakistan", and says, "It was a spy drama that threatened fatally to undermine relations between the US and Pakistan: two men shot dead by a covert CIA contractor.

Six years on, the case of Raymond Davis has again prompted a political row in Pakistan, with the publication of a tell-all book by the former CIA man. The memoir lifts the lid on the political intrigue that ended with him being spirited out of Pakistan in 2011. It has triggered demands for Mr Davis to be extradited to face justice, but also revived debate about the power of the state over Pakistani life and the rule of law.

*The Contractor: How I Landed in a Pakistani Prison and Ignited a Diplomatic Crisis*, published last week, paints a vivid picture of the moment Mr Davis opened fire on two armed men who stopped his car in Lahore on January 27, 2011. 'As soon as I saw the gun's muzzle moving in my direction, I unclicked my seatbelt and started to draw the gun. In a matter of two or three seconds, the entire engagement, from the moment I saw the threat to the moment it had been eliminated, was over,' Mr Davis wrote.

The two men, Muhammad Faheem and Faizan Haider, were killed by five rounds each from Mr Davis' Glock 17. They were said to be agents of Pakistan's feared spy agency, the Inter-Services Intelligence (ISI) who had been following Mr Davis, though this has never been confirmed. Police disputed Mr Davis' claim that he had fired in self-defence, and investigators claimed that neither of the dead men's weapons had a bullet in the chamber.

Mr Davis was almost lynched by a mob, his life saved by Pakistani policemen. He claims he was tortured by ISI. Facing claims for his execution, he was abruptly released after 49 days. After \$2.4 million was paid to his victims' families, he was put on a plane to Afghanistan. 'ISI orchestrated my exit,' he wrote, claiming that the US was desperate to free him before launching its raid to assassinate Osama bin Laden, just six weeks later, in Abbottabad.

**Headstone for unmarked grave of Nazi spy:-** The third news item from this issue of *The Times* has a local connection to those of us who reside near the city of Cambridge, the unfortunate individual referred to has a rather unlikely and perhaps innuendo-inspiring name for those of us whose everyday language is English, "Headstone for unmarked grave of Nazi spy" is the headline of a short item by Simon de Bruxelles, which says, "He was a forgotten casualty of the Second World War: a Dutch Nazi Spy who shot himself in a Cambridge park fearing his cover had been blown.

Englebertus Fukken is to receive a permanent memorial after relatives were granted permission to place a headstone on his unmarked grave. Fukken, 26, was recruited by the Abwehr, the German military intelligence organisation, shortly before the Nazis occupied the Netherlands and was parachuted into Britain in 1940. He landed in Buckinghamshire, a few miles from the top secret code-breaking centre at Bletchley Park and made his way to Cambridge with false papers in the name of Jan Willem Ter Braak.

For the next four months he is believed to have travelled around southern Britain reporting back on damage caused by Luftwaffe air raids. He used a transmitter hidden in a small suitcase until his batteries ran out, then started sending letters written in invisible ink. By spring 1941 his money had ran out and the Food Office had begun asking questions about his forged ration card. At the end of March he made his way to Christ Pieces Park where he shot himself in a public air raid shelter with his Abwehr-issued pistol.

Guy Liddell, deputy head of MI5, recorded in his diary that Fukken's death solved the mystery of the 'parachutist reported near Bletchley'. The case was covered up and Fukken's own family were not aware of his fate until recently. They plan to erect a headstone on his grave at Great Shelford, four miles from Cambridge."

The name of Jan Ter Braak triggered something in the memory circuits that a piece on this individual and his demise in Cambridge had featured in an article in our local paper, the *Cambridge Evening News* a few years back in a series on little-known historic events in the city, and that there had been some feedback in the form of reader's letters following on from this. A search through my press cuttings books found that this was more than a few years ago, it was over two decades ago – it's later than you think! - and I appear not to have saved the original article but a couple of letters from readers who seemed to know something about the case suggests that all might not be all that straightforward with the Ter Braak/Fukken case.

From the *Evening News* of 31-December 1996, a letter from a David Farrant of Newmarket said:- ".....Everyone then had fallen for John Masterman's official cover story, as was intended, that this man was a German agent who killed himself. However, as the real Jan Ter Braak died many years later in his native Holland and the Abwehr had no record of the Cambridge agent, one is led elsewhere for the story.

I know some of it and would like to hear from any readers who know more.

'Ter Braak' was associated with Prof Arthur Pigou from King's College, who with others was gathering information for Soviet use in the Cambridge/Newmarket area.

Ter Braak was a bookseller and a local book collector was Victor Rothschild (the 'fifth man') according to Roland Perry in his book). Rothschild had the lease on a London house where Blunt, Burgess and his wife Tess Mayor lived. A frequent visitor there was Guy Liddell (MI5), who some say was responsible for the Cambridge cover-up when 'Ter Braak' was thought to expose a highly placed Soviet agent and was 'liquidated'.

There were many other connections too. Anyone know any more?"

A week later, on 6-January-1997 another letter on the subject appeared from a Peter Clifton, also of Newmarket:- "The wartime communist connection stretched to Newmarket. Archive material reveals that Victor Rothschild was a resident of Newmarket's Palace House. Richard Llewellyn-Davis, another 'apostle', visited Rothschild at Newmarket. His wife-to-be Patricia Rawdon-Smith shared a flat with Tess Mayor in Bentick Street (she was later to be Rothschild's second wife).

At this time SOE and other intelligence organisations were active at Newmarket Heath, RAF Newmarket and three miles away at RAF Snailwell the testing of aircraft and associated equipment was ongoing. It was a haven for Soviet agents, including Prof Pigou and his student Wilfrid Noyce and others. Other people were put at real risk, such as the brave and courageous agents placed in occupied Europe by SOE."

**Nicholas and Alexandra :-** Rehabilitation of "Bloody Tsar Nicholas":- the motion picture "*Nicholas and Alexandra*" was shown on one of the TV film channels several times over a week or two earlier this year, better than the usual stuff they show these days, which resulted in the expenditure of a trifling sum at a local emporium to purchase the DVD of the same, worth doing anyway because it appears that all films shown on TV are cut down, either edited for violence and well, that other thing, or to fit in with the available transmission slot.

The DVD version runs for 181 minutes, just over three hours, then, and the plot can be best summed up by the "blurb" on the back of the DVD case:- "Michael Jayston (Nicholas II) and Janet Suzman (Alexandra) star in this epic portrayal of the years of corruption, oppression and bloodshed leading up to the Russian Revolution.

Born to be one of the world's most powerful men, ruler of millions with an empire that stretched over more than one sixth of the world, Nicholas and his family are doomed to die violently at the hands of his people in revolt.

Winner of two Academy Awards, Best Art Direction and Best Costume Design, 1971, *Nicholas and Alexandra* features an all-star cast of Britain's finest actors including: Sir Laurence Olivier, Irene Worth, Harry Andrews, Jack Hawkins, Michael Redgrave and Tom Baker as Rasputin."

So it was interesting to see a short item in *The Times* of 18-July with the headline, "Pilgrims march for murdered Nicholas II", written by Howard Amos, which says:- Russia has marked the 99<sup>th</sup> year since the killing of its last Tsar and his family with a religious procession and a new statue. Tens of thousands of Orthodox Christians walked through the night from the Siberian city of Yekaterinburg to the spot 13 miles away where Nicholas II was killed by a Bolshevik firing squad as monarchist forces approached the city during the Russian Civil War.

Nicholas remains a divisive figure in Russia. Many blame his failings for the end of the Romanov dynasty and the creation of the Soviet Union. But he is revered as a martyr by conservatives and monarchists and was made a saint of the Orthodox Church in 2000. The procession began shortly after 2am – about the same time that the tsar was shot – and people walked to an Orthodox monastery on the site of the merchant's house where the killing took place. Priests, local Cossacks and nationalists were among the participants, who also included Natalia Poklonskaya, a controversial MP who claimed this year that a bust of Nicholas had oozed myrrh on the 100<sup>th</sup> anniversary of him being overthrown as tsar in the February 1917 revolution.

In another service of commemoration, a church in the Siberian city of Novosibirsk unveiled a statue of Nicholas and his son Aleksei, who was

thirteen when he died alongside his father, mother and sisters.

Although Nicholas was a cousin of George V of England, he was declined asylum in the United Kingdom because Lloyd George's government feared the move would cause protests. Russia is marking the centenary of the 1917 revolution but commemorations have been muted because the Kremlin prefers a historical narrative that stresses national triumph."

Point to Ponder:- "The past is a foreign country: they do things differently there". L.P. Hartley, opening words from *The Go-Between*.

**F06 Schedules (September 4, 2017)**

Most schedules repeat the next day using the same times and frequencies if a message was sent, unless noted.  
 Yellow schedules indicate message-only repeats of other schedules, not always present.

**Notes:** XPA c 0600/0700z schedule appears to be robust with reasonably strong signals into UK. Day change, Saturday to Monday 02/08/2017

XPA2 m Repetitive frequency triplets, appears robust, generally strong into UK

XPA2 r Schedule appears robust; generally very strong signals to UK

XPA2 t Weak in UK

XPA2 p Six day variable schedule, separate document

Bespoke decoding program used to decode: 'Sepal'

Updated 17/08/2017

## XPA2 p Russian Intelligence Multitone Systems [Radiogramma] Transmission Schedules

### XPA2 p

Appears to be a robust schedule

Usually strong into UK, poor conditions known to affect sendings.

## **SPECIAL MATTERS**

Thanks to all our contributors:

Ary, Edd, BR, DanAr, dmhz, DoK, E, HFD, HJH, Jochen, Malc, MaleAnon, PoSW, PLdn, RNGB, tING, Token  
Apologies to anyone missed.

**Operation Jalla:** Nil Return

### **MESSAGES:**

E: Thanks for useful logs es adverts - Hope yr QRM subsides. 14075kHz indeed amateurs QRP data mode JT65. - Rgds
