Antenna for overseas communication

אנטנת התח"ל

הוואי "תاحאל"

עם הקמתה המוסד בשנת 1951, שכן מטה הארגון בדרום הארץ. בשנות 1955-1956 הוצבה באן יחידת הקשר האלחוטי של המוסד עם שלוחותיו בחו"ל. שנקראה דשות תחתי (תחנות חוץ לא-ארץ). עם ראשוני הייחודה נמנו 'הדרועונים', שירותו באלהותים בספינות המעפילים של המוסד לעלייה ב'. עמוד התורן של האנטנה נותר שריד ממשרד החוץ בקריה, סיור תורן האנטנה החבשנית והודאות לתרומות הנברת' שר/ לזכר אהרון פה.

With the establishment of the Mossad in 1951, the organization was headquartered on the southern side of the Kiryah. In 1955, the wireless unit of the Mossad, which communicated with its overseas branches, was stationed here; it was called the TAHAL (Hebrew acronym for 'foreign stations'). The first units were the 'Gideons' which served as telegraph operators on the illegal immigrant ships of the Mossad L'Aliya Bet (a branch of the Haganah in the British Mandate that operated to smuggle Jewish immigrants to Palestine). The mast of the antenna is the only remaining element of the Mossad offices in the Kiryah. The preservation of the antenna was made possible thanks to a donation by the Mez group in memory of Aharon Mez.

Remember E10?
Our RDF exercise on this always cut through
Tel Aviv, where Kiryah is situated

ISSUE 114
September 2019

<http://www.enigma2000.org.uk>

Editorial

Apart from the propagational and noise problems there are other changes being experienced whilst monitoring Number Stations; changes in ident, frequencies and with the polytones apparent station closure. I have searched for the XPA2 Sunday/Tuesday schedule 'm' as well as Friday/Saturday schedule 'r' and both with little success. A break in Scarborough, with no radio, meant I was unable to monitor the XPA1 Tuesday/Thursday 'c' schedule but I did get to see CSOS Scarborough in all its glory. Radio signals seem to be perking up for now but in the UK the noise due to ADSL/Broadband distribution and these damnable poorly made PSUs's that have pervaded society continue to cause us problems. I have noticed it in the countryside at Bletchley too, which I had thought might be somewhat quieter being away from the general humdrum of city life; sadly it isn't really so.

Many thanks to the reader who sent the front page pics in; we've featured like before but these really are a reminder of E10 in its past form before its migration to BGAN and SATPhone use .

A couple more pics for your pleasure:

Again, thanks to 'XY.'

Propagation, again!

The poor conditions have prevailed however two unexpected lifts suggest we may be in for a treat HF wise. 10M was well open around 1900z / 2000z on the 13th and 14th August enabling me to raise my spirits somewhat as I perused the forthcoming extraction of a diseased molar. I was as glad to see the back of it as I was glad to see the lift on both days. Even 18 and 24MHz seemed busy and I had briefly looked at 21MHz on Saturday during my regular stint at Bletchley Park to see traces of USB sigs there on the waterfall of the unit being used.

Shout from the past?

In Group Message 59329 Barry Williams [SloRoll] writes, "6925kHz USB. Pirate station started up by playing Lincolnshire Poacher & 5 fig group. Classic Pirate Radio Relay Service with old number station clips aired. A station ID was given out, and frequency changes along with mode changes occurred during the broadcast. It was a bit of fun to listen to. 0115 utc, 12 Aug. I thought the group would be interested in hearing about this station.

Thanks Barry, brilliant post, a good trip down memory lane and perhaps enhanced by Jochen's mention of the German language stations.

Here's another brilliant offering from our Man in Belfast; a true shout from the past it really is worth a look for those of us 'of a certain age.'

Radio Free Derry remembered 50 years on

By Áine O'Donnell BBC News NI

<https://www.bbc.co.uk/news/uk-northern-ireland-foyle-west-49369573>

18 August 2019

"This is the first free radio Derry has ever known."

These were the first words broadcast via a clandestine transmitter smuggled across the border into Londonderry in 1969 from the Irish Republic. This was a time of protest, with campaigners clamouring for change in Northern Ireland.

Civil rights campaigner Eamonn McCann set up the transmitter that would broadcast Radio Free Derry.

"We weren't expecting the transmitter to arrive and we knew very little about radio transmitters," Mr McCann said.

"We didn't have a plan. Like most things in those days, it was done on the spot."

"Our first aerial was a strip of tinfoil stuck to the roof and we played records off an old gramophone."

Then aged 25, Mr McCann had the reputation of a fiery speaker at the forefront of the civil rights movement in Northern Ireland. Now he was broadcasting to Derry's Bogside and beyond. 'Daring, fun, unexpected'

The makeshift station's schedule was comprised of music, interviews, updates and political commentary.

It predated the Battle of the Bogside, three days of serious rioting in Derry widely regarded as being among the key moments in the infancy of Northern Ireland's Troubles.

"Radio Free Derry is one of the things I remember most fondly about that time," Mr McCann said.

"In the midst of the mayhem, we were having fun sitting in a flat communicating with the whole of the Bogside trying to be DJs.

"Radio Free Derry was daring, fun and unexpected. It was a light-hearted operation."

But that would soon change.

The Battle of the Bogside in August 1969 came following rising tensions between the nationalist residents of the Bogside in Derry and the RUC (Royal Ulster Constabulary) over an Apprentice Boys parade.

It brought British troops on to the streets of Northern Ireland for the first time.

Mr McCann said: "Within a couple of weeks the seriousness of the situation began to impinge on everybody, it wasn't possible to think of anything in a light-hearted way again."

When violence started to break out on 12 August, 1969 at William Street in Derry, fellow political campaigner Eamon Melaugh rushed home to get the Radio Free Derry transmitter.

"I brought the transmitter to the Rossville Street flats. I threw the cable out the window and started broadcasting," Mr Melaugh explained.

During the Battle of the Bogside, Mr Melaugh was the voice behind the microphone.

"It was a source of information for people. No-one had phones in those days so they found out what was happening through Radio Free Derry," he said.

"I talked for hours on it, non-stop for almost three days. My voice was hoarse by the end of it.

'Primitive equipment'

Mr Melaugh said the radio equipment was uncovered by soldiers during house searches in the Bogside in the years after 1969.

"I had stashed the transmitter in a house under a bed. The family told me a soldier found it and shouted, 'I've got Radio Free Derry'.

"They had to leave each house after two and a half minutes so they left it behind. That could have been the end of Radio Free Derry.

"The equipment was so primitive that if you had as much as coughed on it, it would have fallen apart."

Eamonn McCann said people still speak fondly of the pirate station.

"People always smile when they talk about, there's a tinge of nostalgia when I talk about it. It was unproblematic, it hurt nobody.

"There are plenty of things from that period that we would all like to forget.

"Radio Free Derry is one of the few things that people are pleased to remember today."

Spies on the Radio: Numbers Stations Are Still On the Air

Even in the internet era where members of ISIS and other terrorist groups have been found to use Sony's PlayStation 4 as a communication tool, one relic of the Cold War is still very much active. It is the "numbers station," a shortwave radio station that broadcasts seemingly random number sequences – only the numbers reveal a code that spies use to receive messages from their governments.

The numbers were used with a "one-time pad" encryption, and thus nearly impossible to crack without a code book. Unlike other forms of encryption, the numbers were broadcast in the clear on the shortwave band, which is well above the normal AM/MW frequencies.

While number stations are largely associated with the Cold War, this form of communication actually dates back more than 100 years when the first messages may have been sent to Archduke Anton of Austria during the First World War. The stations saw use during the Second World War and then really picked up during the Cold War. The reason was that short wave signals – unlike AM or FM radio – can be sent vast distances.

NUMBERS STATIONS AND WWII

During World War II numbers stations were also used alongside regular radio stations, notably by the BBC, as way of sending information to agents in occupied Europe. However, messages sent in code on the BBC had disadvantages over messages sent by number stations.

"The types of messages known to have been communicated by the BBC were often simple code phrases which corresponded to pre-agreed instructions or messages," explained Lewis Bush, author of the Cold War study *Shadows of the State*.

"That obviously limits what instructions can be sent without contacting agents by other means to provide them with new code phrases and corresponding instructions," Bush told ClearanceJobs. "By comparison messages in cipher like those sent by numbers stations can consist of any sort of message, and so in a way it is much more flexible."

COLD WAR TECH IN THE 21ST CENTURY

Over the past century number stations really haven't "evolved" much, if at all. The format has remained fairly similar with transmissions of numbers beginning on the hour or half-hour. Many stations offer a brief identifier in the form of radio-alphabet "code names" – such as Alpha Bravo Oscar – following by a characteristic phrase, usually 'attention' or something similar in the relevant language.

The numbers are typically spoken in the clear by a monotone male or female with almost no emotion in the voice. Following the message, stations sign off with an “end of message.” During the Cold War, those messages believed to have originated from the Soviet Union tended to end with a string of zeros. Not all the number stations were actually transmitting to agents during the Cold War, however. Some were in essence decoy stations.

“There is evidence that some numbers stations did not communicate legitimate messages but may instead have broadcast meaningless text,” said Bush. “The reasons for this are less clear, some might have been for training purposes, but it would also make sense that doing this would be an effective way to encourage your opponent to waste resources monitoring your communications and perhaps even encourage them to spend time hunting for non-existent spies.”

The strangest part of the history is that most government agencies that would use them – think the CIA, MI-6, FSB (formerly the KGB) or others – will deny numbers station exist or ever existed. During the Cold War plenty of short wave radio hobbyists would beg to differ – and the really fascinating thing is that the stations are on the air today!

The good news is that for those who want to tune-in, a short wave radio isn’t even required. Here is where the technology has gone high tech. The University of Twente in the Netherlands maintains a web-based software radio.

Priyom.org, an international group that monitors shortwave intelligence and military communications, even publishes a list of active shortwave stations and maintains a listing of known schedules of broadcasts. The group has cataloged interesting activity.

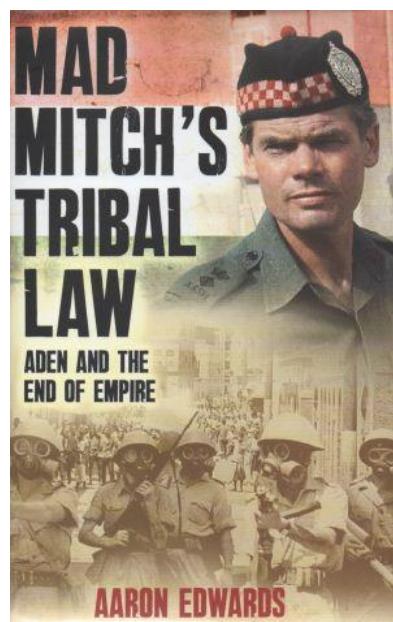

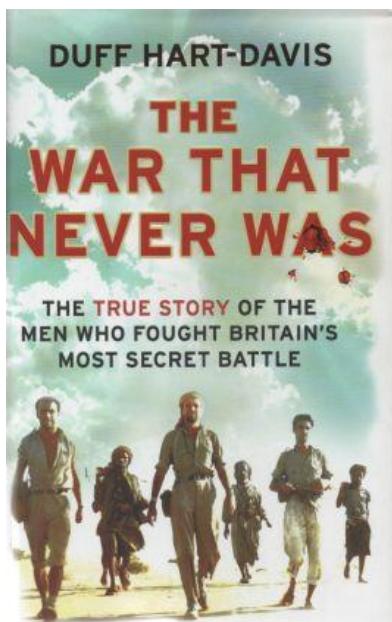

Given that shortwave can be monitored online, and the fact that number stations could be considered a Cold War relic, the question can be asked: Why are numbers stations still used? The best answer is that number stations were reliable and with an unbroken code book. That has advantages over communication through the internet.

“Anything new is also by definition untested and therefore potentially risky, and internet communications are well known to be quite traceable, although it is also used for covert communications,” said Bush.

“By contrast something which has been around for a long time and only really requires equipment as unsuspicious and affordable as a radio is a very safe option,” he added. “The risks are clear and well known, and there is less likelihood of unexpected surprises.”

Thanks Spectre

Recommended Reading

Two books that both have stirring accounts of what was an ongoing ‘small war’ for Great Britain and in the name of Empire in a colony that was deemed a dodgy posting for the military and a decent one for Crown Agents and civilians alike.

There are five E2k members who will read this and who have been unwilling partners in this event jacked up by Egypt’s Colonel Gamal Nasser, the fated FLOSY [the Front for the Liberation of South Yemen] and the NLF [National Liberation Front].

Both protagonists fought the might of the British Military [many whose final resting place is the well-kept military cemetery ‘Silent Valley’] and then on our withdrawal in November 1967, to the strains of ‘Fings ain’t wot they used to be’ played at RAF Khormaksar as our last Governor there climbed the steps to his aircraft, along with pistol bearing bodyguard as ‘independence’ was granted NLF started on FLOSY and wiped them out in days.

Aden became the Republic of the South Yemen and with gusto hosted the Russian Military who they found to be a totally different fish to their ‘Imperial’ masters whom they [the protagonists] wished to free themselves from being their ‘lackey’s’. They found out the British were courteous to them and always requested with a please [unless buggered about then it was a rifle butt or ammunition boot] but always a hard demand with the occupying Russian forces.

They soon wanted us back, something yours truly has been asked of when visiting certain ex-colonies, but of course they fried their own fish thoroughly.

The War That Never Was Starts in September 1962 as a coup d’etat strikes in North Yemen. Never a fan of the Brits it was the flashpoint necessary to bolster some support both ways and by March 1963 plans were underway to train and lead Yemeni tribesmen into battle against Nasser’s Egyptian soldiers. Bloody fighting and good leadership removed in excess of 20,000 troops permanently and led by what can only be described as ‘Mercenaries’ but who were ex-SAS men who believed in what they were doing and prosecuted a legal action against Nasser’s lot who also used chemical warfare against those who opposed their Yemen campaign. It’s a damn good read and there’s radio content too. I say hello to those who may remain, or not remain, in the call book.

Mad Mitch’s Tribal War The end of Empire? It was going that way as Aden was handed over but two events caused the UK Government of the time to send the Argyll and Sutherland Highlanders, led by Lt Col Colin Mitchell into Crater [the capital of Aden at the time, now Krater] to seize back what was ours.

The first was a hand grenade thrown into Shenaz open air cinema; situated on the RH side of the Crater by-pass as you drove away from the Qat market off the Ma'alla Strait it was dominated by the mountain Jebel Shamsam. In fact it dominated everywhere and provided cover for insurgents and British forces alike. That was followed by a failed attack on the local radio station where the insurgent 'got his own back' and then came the atrocity of the wholesale slaughter of a patrol of Royal Northumberland Fusiliers bar one, who took refuge in a flat near to the attack and then to the roof of that block where he fired the entire magazine of his SMG off at some insurgents in for the kill.....the 9mm experience.

Then comes Mad Mitch, his troops and the eerie sound of the pipes as they drive into Crater, make the roof of the Standard Bank as their HQ and set about letting the insurgents know who is boss. Those who carried out the attack were lightly armed members of the Aden Police, a colonial force, who later suffered for their actions.

The account is an excellent one of a soldier who would have fared better had he been involved in Victoria's push for Empire rather than a politico-colonial skirmish where the only winners are the politicians and those who take the risks, with paltry support from their political masters, suffer the excrement from on high as they are discarded into another life. It's a good read indeed.

The outcome of us leaving Aden can be seen on the news; rebels being fought by Saudi airforce and possibly ground troops and little care for the Yemeni life at large. Sad indeed. More sad is that I can never return to the place where I had five years of utter happiness.

Here's something you don't often trip over seen in a property I was inspecting on behalf of someone else

The Battalion delivers competent MI Operators who are highly capable analysts and confident leaders and soldiers. As analysts the training emphasis is on building strong, core Operational Intelligence (OPINT) skills, overlaid by an understanding of actual and emerging threats and theatres of operation.

Analysts need to be able to draw information from a wide range of sources, classified or open. They must be able to understand complex situations and then communicate their conclusions to decision makers often under the pressures of time and the operational situation.

The Battalion is extremely operationally focussed, with a very large number of its officers and soldiers having completed operational deployments. In the past, the Unit has deployed personnel to Kuwait, the Balkans, Sierra Leone, Iraq, most recently to Afghanistan and in support of operations in Libya.

They also support deployed personnel working within the London area. When deployed they are completely integrated with and work alongside their Regular Army Intelligence Corps counterparts.

M08a XVIII ICW / CW, some MCW

No Reports

M12 IB ICW, some MCW / CW, short 0. Reuses many freqs year on year.

New ID's may be only for the month/sched shown, but not necessarily unknown . The reason for their reuse, some after long periods of time, is unknown.

As Edward, (ER), points out in his reports a number of M14 messages consist of some strange groups, which seem unlikely to be genuine coded messages. The most likely explanation is that these are used for training. Examples of these questionable messages are shown above.

M23 O ICW

No Reports

M24 IA MCW / ICW / MCWCC (high speed version of M14), short 0

No reports for a long time - Believed ceased.

Morse Stations - Not Number Related

M51 has recently restarted the practice of sending continuous groups without headers outside of the scheduled lesson times, which is defined as M51b. The station has switched between this variant & M51, (using 100 group blocks with headers), a number of times over the last few years.

M51 XIX

3881//6825 100 grp 5-ltr messages with headers

No logs

	4392		

New Scheds for Jul / Aug 2019:

From logs submitted from JPL & F5JBR

4192//4489	Sending different Round slips	Continues into July & August	V 2B7D (x3) DE 3GR1 (x2) on 4192kHz V HFL2 (x3) DE M6NY (x2) on 4489kHz
------------	-------------------------------	------------------------------	--

Logged on 25 August sending different Round Slips, then on 27 August logged sending the same Round Slip on both frequencies - A rare event;
 V 2B7D (x3) DE 3GR1 (x2)

5691//10383	Sending different Round slips	First heard 15 July continued Into August.	V HFL2 (x3) DE M6NY (x2) on 5691kHz V 2B7D (x3) DE 3GR1 (x2) on 10383kHz
-------------	-------------------------------	---	---

Logged on 25 August sending different Round Slips, then on 28 August logged sending the same Round Slip on both frequencies - A rare event;
 V 2B7D (x3) DE 3GR1 (x2)

4720//NRH	Hand sent Round Slip	First heard 20 August	V WNF(x3) DE FXM (x2) (R5) QSA ? QSV K
4720//5120	Hand sent Round Slip	First heard 28 July	V WNF(x3) DE FXM (x2) (R5) QSA ? QSV K
7620//NRH	Hand sent Round Slip	First heard 28 July	V WNF(x3) DE FXM (x2) (R5) QSA ? QSV K
7620// 8350	Hand sent Round Slip	First heard 03 August	V WNF(x3) DE FXM (x2) (R5) QSA ? QSV K
5920 //6840//10640	New frequency for NYZ	First heard 26 July	VVV (x3) Q2M (x3) DE NYZ (x2) (R5) QSA ?
4860// 5920	New frequency for NYZ	First heard 16 Aug	VVV (x3) Q2M (x3) DE NYZ (x2) (R5) QSA ?

Chart of M89 Freq & Call signs heard in Jul / Aug 2019

New Scheds shown in Bold Type

E06 From PoSW:

First + Third Thursdays in the month 2030 UTC Schedule:-

18-July-19:- 5936 kHz, started about 30 seconds before the half-hour, calling "724", good signal on a clear frequency inside the 49 metre broadcast band, DK/GC "975 975 42 42", ended around 2040:30s UTC, computer shut-down sounds heard after 2042.

1-Aug-19:- 5940 kHz, call "724", DK/GC "741 741 41 41", had started when tuned in a second or two before the half-hour, DK/GC at 2033 UTC so started early.

Strong signal, slight side-band splash from a very strong broadcaster on the HF side, not enough to cause problems. Ended just before 2040 UTC, computer shut-down sounds heard at approx 2041:25s followed by hum.

Friday 2130 UTC Schedule Following First + Third Thursdays:-

5-July-19:- 5731 UTC, call "315", DK/GC "974 974 42 42", S9 signal.

19-July-19:- 5731 kHz, some rather strange behaviour from E06 this evening, started well before the half-hour calling "315" at a more rapid rate than is usual, went on with just a couple of brief pauses around 2135 UTC and stopped at approx 2138; computer shut-down sounds heard followed by plain carrier for about one minute then more sounds – computer starting up again? - started calling "315" again at 2140 UTC, normal speed of delivery this time, then DK/GC "149 149 52 52" at approx 2144. Ended around 2153, carrier stayed on afterwards, was still up at 2210z.

2-Aug-19:- 5731 kHz, started about one minute after the half-hour – unusual! Strong signal, call "315", DK/GC "741 741 41 412, same as the previous day's 2030z. Ended around 2141 UTC, computer shut-down sounds at 2142:40s.

Thanks PoSW.

PoSW's logs and analysis:

Saturday + Sunday Schedule, 0600 UTC Start:-

6-July-19, Saturday:- 0600 UTC, 9064 kHz, “024 024 024 1”, DK/GC “597 49” x 2, indicating around “7” on the S-meter.
0620 UTC, 10264 kHz, also S7.

0640 UTC, 11464 kHz, third sending, about one S-point stronger.

7-July-19, Sunday:- 0600 UTC, 9064 kHz, “024” and “597 49” again.

0620 UTC, 10264 kHz, and 0640 UTC, 11464 kHz, the repeats, all reasonable signals.

13- July-19, Saturday:- 0600 UTC, 9064 kHz, and 0620 UTC, 10264 kHz, “024 024 024 000”.

20-July-19, Saturday:- 0600 UTC, 9064 kHz, weak, “024 024 024 000”.
0620 UTC, 10264 kHz, stronger.

21-July-19, Sunday:- 0600 UTC, 9064 kHz, weak, and 0620 UTC, 10264 kHz, stronger, “024 024 024 000”.

3-Aug-19, Saturday:- 0600 UTC, 9064 kHz, “024 024 024 000” S7.
0620 UTC, 10264 kHz, weaker.

18-Aug-19, Sunday:- 0600 UTC, 9064 kHz, “024 024 024 1” for a “full message”, DK/GC “838 49” x 2.
0620 UTC, 10264 kHz, and 0640 UTC, 11464 kHz, all three transmissions S7.

Monday + Wednesday Schedule, 1900 UTC Start:-

1-July-19, Monday:- 1900 UTC, 16263 kHz, “273 273 273 000”, peaking around S7 with QSB.
1920 UTC, 14763 kHz, second sending, slightly stronger.

3-July-19, Wednesday:- 1904 UTC, 16263 kHz, “full message” in progress, missed start having lost track of the time – as you do. Strong signal, ended around 1912:30s UTC.
1920 UTC, 14763 kHz, “273 273 273 1”, DK/GC “940 100” x 2, strong.
1940 UTC, 13363 kHz, third sending, S9+, very strong signal.

8-July-19, Monday:- 1900 UTC, 16263 kHz, “273 273 273 1”, very weak signal in contrast with last week, unreadable.
1920 UTC, 14763 kHz, second sending much stronger, S8 and peaking S9, “273 273 273 1”. DK/GC “687 120” x 2.
1940 UTC, 13363 kHz, over S9.

15-July-19, Monday:- 1900 UTC, 16263 kHz, “273” and “687 120” again, back to being a strong signal, pushing the S-meter well over the “9”.
1920 UTC, 14763 kHz, and 1940 UTC, 13363 kHz, both over S9.

17-July-19, Wednesday:- 1900 UTC, 16263 kHz, “273” and “687 120” again, strong signal.
1920 UTC, 14763 kHz, and 1940 UTC, 13363 kHz, both strong.

29-July-19, Monday:- 1900 UTC, 16263 kHz, “273 273 273 000”, S9+, very strong.
1920 UTC, 14763 kHz, slightly weaker – but not by much.

7-Aug-19, Wednesday:- 1900 UTC, 16147 kHz, very weak signal on the expected frequency
for the first sending of this schedule in August, unreadable.
1920 UTC, 14647 kHz, “164 164 164 000”, weak but readable – just.

14-Aug-19, Wednesday:- 1900 UTC, 16147 kHz, “164 164 164 000”, very strong signal unlike on the 7th.
1920 UTC, 14647 kHz, strong.

19-Aug-19, Monday:- 1900 UTC, 16147 kHz, S6 to S7, and 1920 UTC, 14647 kHz, weaker,
“164 164 164 000”.

21-Aug-19, Wednesday:- 1900 UTC, 16147 kHz, “164 164 164 000”, S4 to S5.
1920 UTC, 14697 kHz, stronger signal this evening, around S8.

Sunday + Wednesday Schedule, 1700 UTC Start:-

This schedule made the change from AM to SSB and a change of frequencies in July of last year, so now one year on and following the usual practice with E07 the frequencies in any month should be predictable from now on.

3-July-19, Wednesday:- 1700 UTC, 12223 kHz, strong signal, “201 201 201 1”, DK/GC “5700 60” x 2.
 1720 UTC, 11023 kHz, second sending, around S8.
 1740 UTC, 10123 kHz, also S8.

7-July-19, Sunday:- 1700 UTC, 12223 kHz, “201 201 201 000”, peaking around S9.
 1720 UTC, 11023 kHz, slightly weaker.

10-July-19, Wednesday:- 1700 UTC, 12223 kHz, over S9, and 1720 UTC, 11023 kHz, S7, “201 201 201 000”.

17-July-19, Wednesday:- 1700 UTC, 12223 kHz, “201 201 201 1”, DK/GC “278 81” x 2, strong signal.
 1720 UTC, 11023 kHz, and 1740 UTC, 10123 kHz, both weaker.

21-July-19, Sunday:- 1700 UTC, 12223 kHz, “201 201 201 1”, DK/GC “8742 43” x 2, S9
 signal, a relatively short message, total transmission time just under seven minutes.
 1720 UTC, 11023 kHz, and 1740 UTC, 10123 kHz, both around S7.

31-July-19, Wednesday:- 1700 UTC, 12223 kHz, “201 201 201 000”, peaking S9.
 1720 UTC, 11023 kHz, S6 to S7.

4-Aug-19, Sunday:- 1700 UTC, 13397 kHz, “316 316 316 000”, S6 to S7.
 1720 UTC, 12197 kHz, over S9.

7-Aug-19, Wednesday:- 1700 UTC, 13397 kHz, and 1720 UTC, 12197 kHz, “36 316 316 000”.

14-Aug-19, Wednesday:- 1700 UTC, 13397 kHz, “316 316 316 1” for a “full message”, DK/GC “231 57” x 2, S5 to S7.
 1720 UTC, 12197 kHz, over S9.
 1740 UTC, 10697 kHz, S8.

18-Aug-19, Sunday:- 1700 UTC, 13397 kHz, “316 316 316 1”, DK/GC “207 30” x 2, another short message, ended around 1705:30s UTC. 5F groups 11 and 15 were the same, “36170”.
 1720 UTC, 12197 kHz, and 1740 UTC, 10697 kHz, the repeats.

21-Aug-19, Wednesday:- 1700 UTC, 13397 kHz, “316 316 316 1”, DK/GC “536 139” x 2,
 competing with a wide-band pulse signal extending from approx 13375 to 13400, over-the-horizon radar, perhaps.
 1720 UTC, 12197 kHz, strong signal.
 1740 UTC, 10697 kHz, S8

E07a

We start with PoSW's logs and analysis:

Friday Schedule, 1510 UTC Start:-

5-July-19:- 1510 UTC, 12213 kHz, “241 241 241 1 39794”, a full message, the first for several weeks - perhaps since the month of March. DK/GC “9835 57” x 2, good signal.
 1530 UTC, 11413 kHz, second sending, slightly weaker signal.
 1550 UTC, 10113 kHz, third sending, weakest of the three, inside the 30 metre amateur band, weak CW on a close frequency.

12-July-19:- 1510 UTC, 12213 kHz, “241 39794 9835 57” again.
 1530 UTC, 11413 kHz, and 1550 UTC, 10113 kHz, all three transmissions indicating around S8.

19-July-19:- 1510 UTC, 12213 kHz, and 1530 UTC, 11413 kHz, “241 241 241 000”, back in the old routine.

2-Aug-19:- 1510 UTC, 12213 kHz, “241 241 241 000”.
 1530 UTC, 11413 kHz, second sending, both around S7.

9-Aug-19:- 1510 UTC, 12213 kHz, and 1530 UTC, 11413 kHz, both good signals, “241 241 241 000”.

23-Aug-19:- 1510 UTC, 12213 kHz, and 1530 UTC, 11413 kHz, 2241 241 241 000”.

Saturday Schedule, 0800 UTC Start:-

6-July-19:- 0800 UTC, 12173 kHz, “198 198 198 1 39794”, DK/GC “9835 57” x 2, it has been observed that this E07a schedule is always a repeat of the previous day's 1510z sending and thus it was today. Weak signal.
 0820 UTC, 13973 kHz, second sending, also weak.
 0840 UTC, 14873 kHz, third sending, the strongest.

13-July-19:- 0820 UTC, 13973 kHz, missed the 0800z sending, “198 39794” and “9835 57” again.
 0840 UTC, 14873 kHz, both transmissions around S6.

20-July-19:- 0800 UTC, 12173 kHz, and 0820 UTC, 13973 kHz, “198 198 198 000”.

3-Aug-19:- 0800 UTC, 12177 kHz, “148 148 148 000”, strong “XJT” noise-maker on frequency.
 0820 UTC, 13477 kHz, interference from a rapidly swept carrier.

10-Aug-19:- 0800 UTC, 12177 kHz, and 0820 UTC, 13477 kHz, “148 148 148 000”.

Wednesday Schedule, 2000 UTC Start:-

3-July-19:- 2000 UTC, 12166 kHz, "172 172 172 1 16865", DK/GC "230 73" x 2, very strong signal.
 2020 UTC, 10766 kHz, second sending, strong.
 2040 UTC, 9266 kHz, also strong.

10-July-19:- 2000 UTC, 12166 kHz, "172....16865" and "230 73" again, very strong.
 2020 UTC, 10766 kHz, and 2040 UTC, 9266 kHz, both strong.

17-July-19:- 2000 UTC, 12166 kHz, and 2020 UTC, 10766 kHz, both very strong, "172 172 172 000".

7-Aug-19:- 2000 UTC, 12166 kHz, "172 172 172 000", very strong.
 2020 UTC, 10766 kHz, also very strong.

14-Aug-19:- 2000 UTC, 12166 kHz, "172 172 172 1 30894", DK/GC "338 77" x 2, very strong signal.
 2020 UTC, 10766 kHz, and 2040 UTC, 9266 kHz, repeats, both very strong.

G06

PoSW leads us into the G06 logs:

First + Second Mondays in the Month 1700 + 1800 UTC Schedule:-

8-July-19:- 1700 UTC, 5344 kHz, "145 145 145 00000", tuned in at approx 1701z, voice stopped at 1704:20s UTC so probably started a few seconds after 1700.

1800 UTC, 5918 kHz, second sending, started about ten seconds after the hour.

5-Aug-19:- 1701 UTC, started late, 5344 kHz, "145 145 145 00000", S7 to S8.

1800 UTC, 5915 kHz, difficult copy, very strong DRM-type signal.

Second + Fourth Thursdays in the Month 1830 UTC Schedule:-

11-July-19:- 6887 kHz, calling "842", DK/GC "996 996 15 15", an unusually short message, ended a bit before 1837 UTC.

8-Aug-19:- 6887 kHz, "842", DK/GC "978 978 44 44", ended after 1841 UTC, computer shut-down sound heard just before 1842 followed by mains hum.

22-Aug-19:- 6887 kHz, "842", DK/GC "978 978 44 44", as on the 8th, complete with computer sounds after the ending.

Friday 1930 UTC Schedule Following the Second + Fourth Thursdays:-

12-July-19:- 5943 kHz, call "218", DK/GC "974 974 42 42", so not a repeat of the previous day's short message. Ended after 1941 UTC, computer shut-down sound heard shortly afterwards.

9-Aug-19:- 5936 kHz, "218", DK/GC "978 978 44 44", same as yesterday's transmission complete with computer shut-down sound and hum after the ending. Started well after the half hour.

S06s call-ups

A major change of call-ups occurred from 1st August. This is the first change I know of the regular calls since this station was first discovered more than 20 years ago. And in those days it was an Old Man and S06s was only differentiated from S06 by the slower delivery speed of the final 00000's sent at the end. It was to be a few years later (May 2004) that is started sending short messages, one a month.

Only a few of the calls have remained unchanged. And ID 427 was heard on two different schedules. A mistake? Time will tell.

One the transmitters has a fault on the usb causing a lot of distortion and sounds high on frequency, but sounds fine when listening in AM mode.

Mondays:

06.30 16320kHz	'462'	(ex '524')
08.30 8221kHz	'764'	(ex '371')
09.00 16380kHz	'232'	(ex '872')
12.00 10230kHz	'149'	(ex '831')

Tuesdays:

06.00 15945kHz	'438'	(No Change)
07.00 5430khz	'452'	(ex '374') and repeat now at 0710z instead of 0715z
07.30 7365kHz	'427'	(No change)
08.00 14373kHz	'127'	(ex '352')
10.00 4820khz	'427'	ID Mistake?
11.00 6810khz	'265'	(ex '893')
15.00 6766kHz	'914'	(ex '537')

Wednesdays

07.30 11530kHz	'172'	(ex '745')
08.30 11565khz	'464'	(No Change)
10.00 14580kHz	'276'	(ex '729')

Thursdays

08.00 16780kHz	'217'	(ex '674')
09.30 9255kHz	'698'	(ex '314')
12.00 13145kHz	'175'	(ex '425')

Fridays

06.30 10290kHz	'156'	(ex '516')
09.00 6844kHz	'239'	(ex '624')

Saturday

08.00 12460kHz	'132'	(ex '254')
----------------	-------	------------

E17z (in green) has been included for completeness.

The following calls with their corresponding schedules have disappeared. Either no longer in use or on different schedules not found.
ID 153, 167, 176, 196, 278, 328, 418, 471, 481, 635, and 934

With thanks to RNGB, Malc, Ary, HfD

We follow on with PoSW's logs, analysis and findings:

S06 OM Voice:-

First + Third Fridays in the Month 2000 + 2100 UTC Schedule:-

5-July-19:- 2000 UTC, 9336 kHz, “627 627 627 00000”, strength around S6.

2100 UTC, 7314 kHz, second sending, what appears to be the last remaining regular schedule of this once prolific number station – at least in the UK evening-time.

19-July-19:- 2000 UTC, 9336 kHz, “627 627 627 000002, S7 to S8.

2100 UTC, 7310 kHz, weaker broadcast station on the same frequency.

This schedule moved by one hour in August, as is its custom from time to time:-
1900 UTC, 9336 kHz, “627 627 627 00000”, peaking around S8.

Unable to find a second sending at 2000 UTC, 9 PM in the good old summertime here, a very strong wide-band signal assumed to be a DRM broadcaster taking up the band between roughly 7308 to 7318 kHz.

S06a YL Voice:-

A selection of some of the stronger transmissions heard in the last couple of months; with any schedule a message is transmitted two weeks in succession and during the last few days at the end of the month which fall outside this pattern the transmission is always of the “00000 - no message” format.

In August several S06s schedules changed their “call”, that is the 3-figure number spoken for about the first four minutes of the transmission; I don't recall this happening before, unusual enough to be worthy of comment.

Monday 0830 + 0840 UTC Schedule, Call “371” - changed to “764” in August:-

1-July-19:- 0830 UTC, 8221 kHz, DK/GC “240 240 5 5”, strength S6, “89964 76695 41068

16101 43982”.

0840 UTC, 9353 kHz, weaker.

8-July-19:- 0830 UTC, 8221 kHz, “240 240 5 5” and 5Fs as on the 1st.

0840 UTC, 9353 kHz, very weak signal.

15-July-19:- 0830 UTC, 8221 kHz, DK/GC “902 902 5 5”, “36148 25163 22415 25821 73717”.
0840 UTC, 9353 kHz, weak.

Tuesday 0730 + 0740 UTC Schedule, Call “427”:-

2-July-19:- 0730 UTC, 7365 kHz, weak signal, strong broadcast station on the same frequency, unreadable.

0740 UTC, 11655 kHz, second sending much stronger, over S9 with QSB, DK/GC “538 538

6 6”, “33640 38293 33663 35358 41385 36362”.

16-July-19:- 0730 UTC, 7365 kHz, DK/GC “985 985 6 6”, not too strong, “81235 32469 33311 37642 86212 43808”.
0740 UTC, 11655 kHz, much stronger, peaking over S9.

30-July-19:- 0730 UTC, 7365 kHz, “427 427 427 00000”, “no message”, as expected, this being the fifth Tuesday in this month.
0739:10s UTC, 11655 kHz, the expected early start for this format.

13-Aug-19:- 0730 UTC, 7365 kHz, DK/GC “583 583 6 6”, “38024 43233 30906 33558 32330 96724”.
0740 UTC, 11655 kHz, strong signal.

20-Aug-19:- 0730 UTC, 7365 kHz, very weak signal, unreadable. Second sending much better.
0740 UTC, 11655 kHz, DK/GC “859 859 6 6”, peaking around S8, “35943 64372 13078 10915 84612 76148”.

Wednesday 0730 + 0740 UTC Schedule, Call “745”:-

3-July-19:- 0730 UTC, 11530 kHz, DK/GC “918 918 6 6” - but there were only five 5F

groups:- “43806 44187 46688 40529 30535”, over-riding a weaker broadcast station on the same frequency.

0740 UTC, 14977 kHz, second sending, S7 with QSB.

10-July-19:- 0740 UTC, 14977 kHz, missed the 0730z sending, “918” and “6” as expected,
still only five 5F groups, around S9 with S9.

31-July-19:- 0730 UTC, 11530 kHz, “745 745 745 00000”, competing with the broadcaster,
a distinct low frequency beat-note suggesting a slight difference of frequency between the two carriers.
0739 UTC, just after, 14977 kHz, S8 with QSB.

In August this schedule changed the call to "172":-

7-Aug-19:- 0730 UTC, 11530 kHz, calling "Odin sem dva", not "Sem chety're pyat", DK/GC "890 890 5 5", became swamped by the strong broadcast station on the same frequency.

0740 UTC, 14977 kHz, strong signal on a clear frequency, "39534 17228 15636 47891 23247".

21-Aug-19:- 0730 UTC, 11530 kHz, DK/GC "934 934 5 5", competing with the broadcaster.

"35944 64372 13078 10915 84612", 5F groups 2,3,4 and 5 were also used in yesterday's "427" schedule, and 5F group number 1 was just "one up".

0730 UTC, 14977 kHz, second sending.

Wednesday 1000 + 1010 UTC Schedule, Call "729":-

3-July-19:- 1000 UTC, 14580 kHz, DK/GC "514 514 6 6", strong signal, "88443 36772 98493 36340 32048 34338".

1010 UTC, 16020 kHz, second sending, slightly weaker signal.

17-July-19:- 1000 UTC, 14580 kHz, DK/GC "541 541 6 6", good signal, "28294 27130 22902 93322 95247 22002".
1010 UTC, 16020 kHz, much weaker.

31-July-19:- 1000 UTC, 14580 kHz, "729 729 729 00000", S7 to S8.
1009:10s UTC, 16020 kHz, weaker.

Another schedule which changed the call in August, to "276":-

7-Aug-19:- 1000 UTC, 14580 kHz, calling "Dva sem shesht", not "Sem dva devyat"
DK/GC "819 819 5 5", signal up and down, "47665 94092 48321 63888 92060".
1010 UTC, 16020 kHz, peaking over S9 with QSB.

Friday 0630 + 0640 UTC Schedule, Call "516":-

This schedule used to show up at 0930 + 0940 UTC, but as of this summer it has decided to be out and about three hours earlier:-

19-July-19:- 0630 UTC, 10290 kHz, good signal, DK/GC "923 923 7 7", "88569 89617 25757 77159 95225 84090 09531".
0640 UTC, 9655 kHz, strong, well over the "9".

2-Aug-19:- 0630 UTC, 10290 kHz, very weak signal, unreadable.
0640 UTC, 9655 kHz, also very weak, signal came up slightly stronger for just a few seconds, fairly sure "91458 83723 92688" were somewhere in there

23-Aug-19:- this is another S06s schedule which has changed its call in August, is now "156":-

0630 UTC, 10290 kHz, strong signal, calling "Odin pyat shesht". DK/GC "234 234 7 7",
"88620 58069 61732 74537 57440 10597 23521".
0640 UTC, 9655 kHz, S9 signal.

First Saturday in the Month 0800 + 0810 UTC Schedule, Call "254":-

6-July-19:- 0800 UTC, 12460 kHz:- DK/GC "879 879 6 6", "42881 54814 38884 24421 40239 38792". Strong signal, most unusual for this Saturday schedule.
0810 UTC, 10250 kHz, much weaker.

In August the call changed from "254" to "132", from "Dva pyat chety're" to "odin tri dva"

3-Aug-19:- 0800 UTC, 12460 kHz, DK/GC "940 940 5 5", peaking S8 to S9, strong signal again, "64385 82707 06123 78927 34694".
0810 UTC, 10240 kHz, weak.

Very strong

Note: All transmissions were preceded by a 'ticking' pulse signal, *sample below*. Any ideas as to what it might be gratefully requested.

The ticking that preceded each XPA1 c sending, strength S7 to S9. Measured duration between pulses is 150ms.

PoSW's Items of Interest in the Media:-

Who dunnit? Why, the Russians, of course; any incident which causes some kind of disruption in daily life often gets blamed on the Russians in the absence of any other explanation. I remember the "Hatton Garden Heist" of a couple of years back was at first blamed on the Russians by the mainstream media for a short while after its discovery; a crime of a somewhat impressive nature in which the perpetrators had, over the course of the Easter holiday weekend, used some specialist drilling equipment to gain access to a strong-room in the vaults of a building where the wealthy kept their jewellery and other valuables, a haul valued in tens of millions – at least. When the crime was first discovered, the media were in no doubt that a crime of this nature could only have been carried out by some very highly trained experts, almost certainly Russian former or current special forces personnel acting with the approval of the Russian government and that sanctions must immediately be enacted against those in charge in Moscow and yada, yada, blah, blah.

When the facts behind the case swiftly came to light it turned out that those involved, far from being special forces acting at the behest of the Kremlin, were in fact a gang of "old geezers", British through and through, mostly well over retirement age and about as far removed from Vladimir's Spetsnatz types as it is possible to be. So stories such as those with the headline, "Russia linked to huge hack on tax agency", which appeared in The Times newspaper of 17-July come as no surprise. Written by Tom Parfitt, reporting from Bulgaria, it says, "Hackers have stolen private financial data from millions of Bulgarians and circulated it via a Russian email account in an attack suspected to be in retaliation for the country's purchase of fighter jets from the United States.

Links to 57 data-bases, which included identification numbers, addresses and incomes, were sent to local media after Bulgaria's tax agency was hacked. They are understood to have been sent using an email registered to Yandex, Russia's largest technology company. Mladen Marinov, Bulgaria's interior minister, said that the attack could have been in response to the purchase of eight Lockheed Martin F-16 fighter jets for \$1.26 billion.

'Political motives are possible', he told reporters, according to Radio Free Europe's Bulgarian service. He added that emails sent after the leak calling for the resignation of Vladislav Goranov, the Bulgarian finance minister, had come from Russia. 'One can make a guess here,' he said. Mr Marinov, 47, did not say whether he suspected that the Russian state was involved.

Mr Goranov, 42, said that the hack had taken place before the F-16 deal had been approved, and he did not link the two. He confirmed that the data of millions of people had been accessed.

In an email to a television channel the purported hacker claimed to be a Russian citizen with a Bulgarian wife. He is understood to have called for the release of Julian Assange, the WikiLeaks founder. There was no immediate response from the Russian authorities."

The suggestion of hacking by "the usual suspects" was also made as a possible explanation for the failure of the electricity supply which occurred in the early evening of 9-August, although this denied by the authorities. This event occurred just as the homeward rush hour was getting under way. The official reason was later given as lightning strikes but what was unusual was that power cuts occurred over widely spaced parts of the country, not just within a confined area which might be expected if thunderstorm activity was the cause. It was noted that transport was especially disrupted with traffic lights in several towns and cities being knocked out and the electricity supply to commuter rail services badly hit. Trains were stopped from running and it turned out that in many cases that with the loss of power the modern, up to the minute carriages had no method of opening the doors and the windows are incapable of being opened anyway and so many commuters desperate to get home at the start of the weekend were left to swelter for some considerable time on a hot Friday evening. Not a bright prospect for anyone who suffers from claustrophobia.

The Times of 21-August carried an article on the initial findings into the loss of electricity supply with the headline, "Investigation into National Grid after worst power cuts in decades", written by Emily Gosden, Energy Editor, which said among other things, "... The Hornsea One offshore wind farm off Yorkshire and the Little Barford gas plant in Bedfordshire both unexpectedly failed within seconds of each other. A series of small power plants also failed and National Grid did not have enough back-up power to cope with the combined losses, leading to supplies being cut to local networks.

Sixty trains operated by Govia Thameslink 'reacted unexpectedly to the electrical disturbance' and shut down by themselves; half could only be started by an engineer".

It did not take long for the conspiracy theories to start with regard to this incident, hacking by Russia and North Korea was suggested by several callers on radio phone-in shows and perhaps the most intriguing suggestion that it was a limited cyber attack by the Chinese as a warning to the British government not to get involved with the pro-democracy demonstrations kicking off in Hong Kong; all denied off course, but there does seem to be more to this than meets the eye and I don't suppose we will ever know the truth.

Point to ponder:- "If you drive a car, I'll tax the street. If you try to sit, I'll tax your seat. If you get too cold, I'll tax the heat. If you take a walk, I'll tax your feet.", from Taxman by the Beatles, from the album Revolver, available on compact disc, EMI Parlophone CDP 7 464412

Thanks Peter.

The Russian spy who posed as a Canadian for more than 20 years

Elena Vavilova's book offers rare insight into the Soviet deep-cover 'illegals' programme

"A spy has to be an actor, but an actor that doesn't need a public or a stage, and doesn't require the approval of others," says Elena Vavilova, as she sips a cappuccino in a Moscow cafe.

Vavilova acted the part of a Canadian woman named Tracy Foley, an identity stolen for her by the KGB, for two decades. Almost no one knew her real identity, not even her own children. She was an "illegal", a deep-cover Russian operative sent to the west along with her husband Andrei Bezrukov, who used the name Donald Heathfield.

Vavilova and Bezrukov were arrested at their Boston home in 2010, part of a group of 10 Russian spies detained by the FBI, most of them illegals living in the US as ordinary Americans or Canadians. They were deported to Russia in a spy swap that included media favourite Anna Chapman and also involved four Russians accused of spying for the west travelling in the other direction, including Sergei Skripal, who was infamously poisoned in Salisbury last year.

Vavilova has written a fictionalised account of her spying career, called *The Woman Who Can Keep Secrets*, and agreed to meet the Guardian at a cafe in central Moscow, the first time any of the deep-cover illegals has spoken to non-Russian media since their return to the country.

The book provides rare insight into the illegals programme, which was set up by the Soviet Union but continued in modern Russia. Its characters, just like Vavilova and Bezrukov, are a couple who meet at Tomsk University in Siberia in the 1980s, are recruited by the KGB into the top-secret programme and spend years in training before they are dispatched to Canada and the US.

The training includes long hours of language lessons to mimic native accents; evading surveillance, coding and other espionage tradecraft; and a period of living in a country house outside Moscow mocked up to mimic an US home, to help the young Siberians who had never travelled before learn about western life.

In real life, Bezrukov and Vavilova married in the Soviet Union before departing, but they left for the west separately in the late 1980s, staged a meeting in Canada, began "dating" and then married for a second time, this time using their new, Canadian identities. They never spoke Russian together. Vavilova speaks perfect English, though with a noticeable Slavic accent. During her life in the west she claimed to be of French Canadian origin to explain the accent.

The ideal illegal, she says, is someone who is average looking, does not attract attention and does not require external approval. During the final years before the arrests, when the couple were living in Boston, Vavilova worked as a estate agent, while sending regular coded messages back to controllers in Moscow.

Much of the book is devoted to how the couple managed life with their two children. Vavilova and Bezrukov's sons Alex and Tim were 16 and 20 respectively when the FBI made their arrests in 2010, and both believed their parents to be ordinary Canadians.

If Vavilova's story sounds familiar to fans of the US television series *The Americans*, it's because the creators based the show on the story of her family, though they moved the action back to the early 1980s. Vavilova says little of the television series bore much resemblance to reality.

"After watching *The Americans*, I thought: 'Well, that's not the real work and that's not how it's done.'" The show captured the flashbacks and psychological dilemmas faced by illegals well, she says, but the sex and murder shown were not part of her work. Vavilova and Bezrukov used no violence and no disguises. The whole point was to create a fully believable character who would live a mainly "normal" life.

"If one day you come and do something like James Bond, then that's it and you're done, you can't sustain a longer life and work doing that. People think it's always on the edge, but actually most of it is very routine and very boring."

She admits her preparation involved weapons training and karate, but says she never had to use it in the field: “The most it’s good for is self-confidence. In the beginning, if you don’t feel comfortable in certain neighbourhoods, you know that at least you can do something and remember a few moves and could get away from a robber or someone who attacks you.”

The FBI discovered the group because the US had turned Alexander Potelev, the deputy head of Russia’s illegals programme, who escaped shortly before the roundup and is now living in hiding in the US. Vavilova confirms she knew Potelev personally but says she is unsure if his decision to work for Washington was motivated by money or ideology.

In the aftermath of the 2010 spy swap, the general understanding was that the group had achieved little of intelligence value, but Vavilova claims this was not the case. “Of course I can’t talk about it, but I know what we were doing, and it doesn’t matter what others say,” she says.

On their return to Russia, the illegals were invited to the Kremlin to meet Vladimir Putin. Bezrukov now has a job teaching at a Moscow university and an advisory role at a Russian oil company. Vavilova also has a consultancy role at a company, though does not give details, and does not want to discuss current Russian politics.

She admits though that parts of returning home were hard. She left the Soviet Union in the 1980s during perestroika, Mikhail Gorbachev’s attempts to reform the country, and returned to Putin’s Russia, where two decades of capitalism have changed Moscow beyond recognition.

“I didn’t know anything about contemporary culture, and it was only when we came back that we discovered the main political figures of the day. The only news we had about Russia was short items we saw on CNN. It’s very strange to find out that we actually don’t know our own history.”

In many ways, she remains a patriot of the Soviet Union today. “I grew up during Soviet times, so that was my life, what I knew, what I believed in and what I thought was a fair society, so this hasn’t changed really,” she says. Yes, maybe it was not perfect, but no society is perfect.”

Japan Times 30/08/2019

Remains of North Korean spy vessel crew rest alongside war victims in Kagoshima

In the corner of a cemetery near the central part of the city of Kagoshima stands an independent ossuary. The charnel house, administered by the Kagoshima Municipal Government, is home to unidentified people who lost their lives in the bombings of the city during World War II. But few people know that among those laid to rest there are crewmen of a North Korean spy ship that sank off the coast in 2001.

Between March and August 1945, the city was hit by eight air raids that left more than 3,300 people dead. The remains of the unidentified victims of the bombings were laid to rest at the ossuary, which is periodically cleaned and decorated with flowers by residents appointed by the city.

It was in December 2001 when Kagoshima once again found itself in peril when a North Korean spy vessel entered Japan’s territorial waters in the East China Sea and sank there.

Toshimi Shiratake from Nagasaki, 64, who was then chief navigator of the patrol vessel Inasa that exchanged gunfire with the North Korean vessel, vividly remembers the crew aboard the ship.

“They looked brawny and seemed composed the whole time,” Shiratake said. “My intuition told me they were trained professionals.”

The North Korean crewmen ignored orders and warning shots from the Japan Coast Guard to stop and threw away what looked like articles of evidence. The vessel later caught fire but the crew managed to skillfully put out the blaze.

After a nine-hour chase, the North Korean crewmen retaliated by firing rounds from automatic rifles and rocket launchers, and the vessel later was engulfed by an explosion and sank.

Shiratake recalls having seen about a dozen men floating in the water right after the spy ship sank.

Fearing a possible counterattack from the sea surface, the patrol vessel crew threw life buoys but they soon disappeared in the waves.

The 10th Regional Coast Guard Headquarters in Kagoshima strongly suspected the men of being involved in smuggling stimulants.

The Coast Guard retrieved four bodies and the skeletal remains of four other people. Autopsies showed that there is an extremely high possibility that at least seven of the deceased men were from North Korea or South Korea. The investigators also concluded that at least 10 people were on board the North Korean spy ship.

Based on the act that covers the treatment of those who die during a journey, which applied in this case as the people were not recognized as Japanese citizens, the Kagoshima Municipal Government cremated the bodies and bones of the Korean vessel crewmen given that no one showed up to claim the remains. Their remains were treated the same way as unidentified homeless people who die in the city of Kagoshima.

It is believed the government sounded out North Korea to see if they could retrieve the remains. But according to the Japan Coast Guard, “the deal likely fell through” as the government was reluctant to further investigate the incident out of concern that it may hinder Tokyo’s efforts to resolve the issue of Japanese nationals abducted by North Korea.

The remains stored in the ossuary, alongside those of the victims of the Kagoshima air raids, also belong to people without kin who died in the city, as well as others who were buried there before the war and had no one to tend their graves. The city decided to bury the bodies of the North Korean vessel crewmen there, but the local authorities won’t openly disclose the exact place where their remains are buried to avoid any unexpected situations.

Many residents in Kagoshima visit the cemetery on a daily basis, and in late July some were visiting to offer flowers and burn incense sticks. But few come to the ossuary to pray.

When told about the North Korean vessel crew members laid to rest there, most passers-by said they had never heard of that before.

Reactions to the revelation varied.

“I’m opposed to burying them at the same place as the air bomb victims,” a 64-year-old housewife said with a grimace.

A 28-year-old man responded in a more positive way.

“Maybe commemorating them with respect could help improve the ties between Japan and the Koreas,” he said.

Trump tweet of failed Iran launch raises worries about disclosure of U.S. surveillance secrets

WASHINGTON – U.S. President Donald Trump on Friday posted on Twitter a photo of what appeared to be the site of a failed Iranian satellite launch, raising questions about whether he had disclosed U.S. surveillance secrets.

The black-and-white photo showed the fire-blasted launch site at a space center in northern Iran, including a damaged gantry service tower and a downed mobile erector launcher.

Trump, in his tweet, cited the specific location of the site, saying the United States was not involved in the “catastrophic accident during final launch preparations for the Safir SLV Launch at Semnan Launch Site One in Iran.”

Speaking to reporters at the White House later on Friday, Trump defended his posting of the photo and reiterated that the United States had nothing to do with the incident.

“We had a photo. I released it, which I have the absolute right to do,” Trump said.

He said the Iranians “were going to set off a big missile and it didn’t work out too well. Had nothing to do with us.”

The rocket exploded on its launchpad on Thursday, an Iranian official said. A U.S. official also said Iran suffered a satellite launch failure.

“I wish Iran best wishes and good luck in determining what happened at Site One,” Trump said in his tweet.

Patrick Eddington, a former CIA satellite imagery analyst, said the photograph tweeted by Trump appeared to be a classified image taken by a U.S. spy satellite.

“If the president simply tweeted out an image from classified briefing that utilizes our most advanced overhead collection capabilities, it is no doubt welcome news to our adversaries,” said Eddington, now a research fellow at the Cato Institute.

“While he has the authority to declassify any federal document, Twitter is not a legitimate or responsible way to do so.”

A U.S. defense official told CNBC that the picture, which appeared to be a snapshot of a physical copy of the satellite image, was included in an intelligence briefing on Friday.

The Pentagon did not have any immediate comment.

The United States has warned Iran against rocket launches, fearful the technology used to put satellites into orbit could enable Tehran to develop the ballistic missile capability needed to launch nuclear warheads.

Tehran denies the U.S. accusation that such activity is a cover for ballistic missile development.

The Trump administration has ratcheted up economic pressure on Iran this year with economic sanctions to try to force it to renegotiate a pact reached with world powers in 2015 limiting its nuclear program. Trump withdrew the United States from the pact in May last year.

Trump has offered to hold talks with Iran but Tehran says first it must get relief from U.S. sanctions.
