Tactics and techniques to keep security monitoring effective

**ISSUE 130
May 2022**

<http://www.enigma2000.org>

Editorial

Reader information: ENIGMA 2000 is distancing itself from reporting directly on the conflict between Ukraine, Russia as well as NATO and any other interested parties.

We will continue to report on matters ‘espionage’ worldwide with the exception of the above mentioned conflict.

“Man, when perfected, is the best of animals, but when separated from law and justice, he is the worst of all.” Aristotle, Greek philosopher, Politics (4th century BC)

Quotation taken from The Times dtd 7th March 2022

The quick quote above says it all. With events in Ukraine ENIGMA2000 will maintain an impartial view on events and make no comment other than that on SIGINT/ELINT whatever and of course operational changes to the stations we monitor.

Before we get too far into the newsletter we received this change of site info from Dirk Rijmenants

Cipher Machines and Cryptology has moved

“Dirk Rijmenants’ extensive site which features technical & historical information about cipher machines & cryptology has moved to a new domain & can now be found at; <https://www.ciphermachinesandcryptology.com/>

The website is now https encrypted for secure and anonymous surfing, & with a lot more server space for expansion so more content can be expected in the future.

Dirk also has a blog covering cryptology & associated subjects. Both are highly recommended; <https://rijmenants.blogspot.com/> “

One of the most interesting things to happen in the world of Number Stations is the disappearance of the E07 a series. As we know they disappeared from February and have yet to be heard.
S06s and E17z have also obviously gone and as H-FD pointed out there is a suggestion these belonged to the Ukraine :

On August 24, 1991, Ukraine declared its independence from the USSR. On December 21, 1991, the existence of the USSR ended.

Acc. to the E2k Active Stations and N&O ident list v1.3 of September 2017 on January 14, 2010 S06(S)(hereinafter referred to as S06s) was specified as the female variant of S06 ("Russian Man").

S06 belongs to the family IA, which is attributed as "Owner" "KGB/GRU/FSB".

E17z is also assigned to family IA. There is also the note "ex Ukraine?".

According to this, the location of both the S06s transmitters and the E17z transmitter is Russia and the stations belong to the KGB/GRU/FSB.

In recent years there has been increasing evidence that both S06s and E17z would be broadcast from Ukraine. The E2k Newsletter #77 from July 2013, which names the Ukrainian town of Rivne as one/the(?) location, should be mentioned here as an example.

A location in Ukraine would also mean, that the stations belong to the Ukrainian Sluzhba Bespeky Ukrayiny (SBU = Security Service of Ukraine).

With the invasion of Russia into the Ukraine it has become evident that since February 24th all(!) S06s transmissions and the E17z transmission ceased. This strongly suggests that S06s and E17z came from the Ukraine in the past.

Therefore it would be worth to consider whether S06s and E17z should get a different designator and should be assigned to a different family. [H-FD]

Jochen suggested a new sub-group 1 d to cover the Sluzhba Bespeky Ukrayiny SBU if they are the owners.

A quick discussion between Ary, Brian and Paul suggested the idea of 1d is a good , firm move.
However, things are still developing here and we are happy to wait to see if these stations return; in which case it would be imperative we add a sub to the family of 1 d.

We recognised that in the past too many changes were made, perhaps causing more confusion than they prevented,

For the moment there will be no changes, should the stations stay silent a correcting sentence will be added. There seems little point in repairing what has closed.

Thank you to Ary, Brian and Jochen for their help with the determination, as it stands at this time.

Antennas atop the Russian Embassy, Bulgaria --- for communications only, *in case the telephone lines fault.* 

Real Cold War Spies: BRIXMIS

A documentary on BRIXMIS appeared on Forces TV in early April 2022. An interesting piece it can be found here:

<https://www.forces.net/video?video=41782>

Douglas Ronald Britten

Briefly, we continue with the saga of Douglas Britten, a spy in the RAF. We have received some extra information as seen on the right of Mr Britten's headstone. E2k thanks the member, who must remain anonymous, for that info.

However, in the left pane is the entry, a little over the top perhaps, about Mr Britten, as printed in the Short Wave Magazine, dated December 1968. We have also seen images of a one time pad as discovered in Britten's accommodation as well as a 'roll over' copying device disguised as a cigarette case.

One question, the headstone shows only the months and year; October 1931 to January 1990. No days. Any ideas why?

ESPIONAGE—G3KFL

Readers will not expect us to have much to say about this dreary and disgraceful business, so fully reported in the daily press of November 5—there has been enough heard about the failure of a weak character, a traitor to his Service, the methods of trapping used by the "other side," and all the rest of it. It affected us to the extent that—because there was an Amateur Radio angle, with a "ham" (*sic*) involved—we had numerous eager press enquiries and requests for "background" (fortunately, so far as this particular individual was concerned, we had none). As far as was possible, we played it down, and it is probable that at least two "follow-up stories" were stopped. It is to be hoped that, in all the miserable circumstances surrounding the wretched G3KFL, the damage that may have been done to the image of Amateur Radio has been the least possible. While our man languishes in what may seem to be "easy retirement" for the next 14 years or so, the probability is that his contact-man, hurriedly "recalled for consultation," will be shot for his ineptitude.

Whilst Professor Richard Aldrich's book, GCHQ does indeed reveal details up until the arrest and conviction of Mr Britten, answers to the question raised may be found in Chris Boyd's book, Special Operator – The Rise and Fall of a Cut-price Spy.

In here details of events following Britten's release from Prison, his abode, his employment, and the cause of his death at the age of 58 are revealed.

He was buried on 6 February 1990 at Canwick Road Cemetery, Lincoln.

See also PoSW Newsround

The Grave site information of Douglas Ronald Britten (Oct 1931 - Jan 1990) at Lincoln Canwick Road New Cemetery in Lincoln, East Midlands, England, United Kingdom from BillionGraves ©BillionGraves 2019

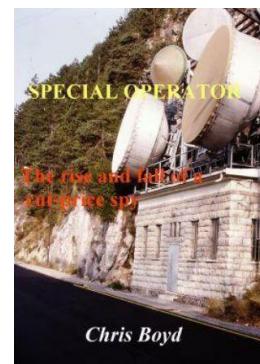

Continuing with the DRB stories, more than adequate cover in here as I stated above.

'Special Operator: The rise and fall of a cut price spy'

[available via Amazon for your 'Kindle, Tablet, iPad' or paperback] Repost from NL92 January 2016

I was fortunate in being asked to read the draft and given the subject matter I jumped at the honour. A well written work it takes one through training, travel and duties of the intercept operator and places the reader in the set room. For those of us of a certain age the descriptive writing conjured up the unique smell of valves [tubes] running efficiently and hot, the warmth of the set cases and so on.

Extremely humorous and equally informative the author takes the reader on a trip around certain parts of the globe where Great Britain had signals units that were employed in the collection of SIGINT, its analysis and ultimate contribution into what has evolved today as the world's greatest intelligence machine.

Chris Boyd

Members of ENIGMA2000 and other like groups will often be told that Morse is obsolete but in this book you will discover within the first few pages that wireless interception of Morse signals [!] is still carried out; the author making reference to the various modes used with 'illicit' transmissions which come from Europe, China, Cuba, Russia etc. An excellent read for the Number Station enthusiast available from Amazon on both sides of the Atlantic

GCHQ Prof Richard J Aldrich [Recommended Read]

This book, published in 2010 and, as far as I can discover, not reviewed by ENIGMA2000 is the definitive history of GCHQ 'From Bletchley Park to a Brave New World.'

634 pages of absolute information and, should you need them, further reference.

In keeping with that written above Prof Aldrich covers a number of subjects at length, including the case of Douglas Britten, noting whatever he did was so serious his trial was held *in camera*.

There's other stuff too, historical to a point but well researched.

It's all there; Bletchley Park and before, after and into the modern world. Prime, Portland, Britten, the American Ivy Bells project – all covered.

Oh, and Russian capabilities too.

Recommended and well worth a read.

Skywaves and satellites

Technologies old and new may help keep Ukrainians in touch with the world

IN COMMUNIST Eastern Europe a shortwave radio was a vital piece of equipment for anyone wanting to stay ahead of the censors. Stations such as the BBC World Service, Radio Free Europe and Voice of America broadcast news, entertainment and rock-and-roll across the Iron Curtain.

After the cold war ended, shortwave radios gave way to television and the internet, and the broadcasts were wound down. But on March 3rd, in the aftermath of Russia's invasion of Ukraine, the BBC announced their return. The World Service has begun nightly news broadcasts into Ukraine and parts of Russia (see map).

Radio is an early-20th-century technology. But the BBC hopes it can still be useful in the internet age because it is hard to

stop. Shortwave signals bounce off the ionosphere, a layer of charged particles high in the atmosphere. The resulting "skywave" travels for thousands of kilometres, meaning broadcasters can sit safely beyond the reach of censors, secret policemen—and invading armies. And in Ukrainian cities like Mariupol, where days of shelling have left the place without electricity, battery-powered radios still work when the internet and television do not.

Ukraine's government does rely on the internet where it can, though, to fight the public-relations war and to keep communication with the outside world alive. In the past few days, for example, Volodymyr Zelensky, the president, has addressed America's Congress, the European Parliament and Britain's House of Commons via a video link.

With Russian troops massing near Kyiv, ground-based internet links are unlikely to last. But, on February 28th, Mykhailo Fedorov, Ukraine's vice-prime minister, thanked Elon Musk, an American entrepreneur, for a delivery of "Starlink" satellite-internet dishes. These can provide high-speed, low-latency access to the internet via a network of low-flying satellites run by SpaceX, one of Mr Musk's companies. A few days later Mr Musk said SpaceX had modified the dishes' software to allow them to be powered by a car's cigarette lighter. That could prove useful if and when the siege of Kyiv begins in earnest.

Russian Comms in Ukraine: A World of Hertz

Sam Cranny-Evans and Thomas Withington

9 March 2022 10 Minute Read

<https://rusi.org/explore-our-research/publications/commentary/russian-comms-ukraine-world-hertz>

Evidence of Russian communications in Ukraine indicates that the modernisation of the Russian Armed Forces has been troubled, causing operational and tactical challenges.

Russia's war in Ukraine has been marked by its apparent lack of coordination and an ostensibly flawed plan. Russian forces have been observed moving deep into Ukraine, only to be cut off by a lack of fuel, vehicle breakdowns, and ultimately Ukrainian forces. Open-source intelligence and Ukrainian reports suggest that radio communications across the Russian forces are poor, leading to makeshift solutions including the use of unencrypted high frequency (HF) radio for long-range communications and mobile phones to communicate. There is some evidence that Russian soldiers have deployed with more advanced software-defined radios (SDR) such as the R-187P1 Azart and R-168-5UN-2 tactical radios that were carried by a Russian airborne soldier captured near Kyiv. However, the impression provided by the Russian Ministry of Defence (MoD) over the years has been that this equipment was widespread and that the majority of the Russian Armed Forces (RuAF) were operating digital radios and systems designed to facilitate planning and decision-making.

The R-187P1 Azart is a sixth-generation digital tactical SDR with built-in encryption designed to provide Russian troops with secure and jam-resistant communications. It operates in the very high frequency (VHF)/ultra high frequency (UHF) bands, has a range of 18 km in ground communications depending on configuration, can be used as a repeater station and can utilise GLONASS or GPS to provide positioning. The radios appear to have been delivered for the first time in 2017 to the 90th Guards Tank Division and were provided to other units thereafter, with claims of 300 radios delivered to a unit in the Leningrad region. The R-187P1 serves alongside the R-168 Akveduk family of fifth-generation tactical digital radios, which is also designed to provide uninterrupted communications in an electromagnetically challenging environment. The family has many variants, including HF and VHF systems designed to provide communications up to 350 km and 20 km respectively while mounted in a command vehicle. The radios were introduced by 2000, and deliveries were reported through to 2016 and beyond.

It is possible that the delivery of the Azart radios has been troubled by corruption. Reports from 2021 observed that senior military figures and the Azart's manufacturer were under investigation for fraud and embezzlement. At least some of the radios had been manufactured in China before elements were added in Russia, the defendants claimed. Russian forums discussing the radios also feature complaints of 'childhood illnesses' and short battery lives for the Azart family, as well as further evidence of Chinese parts in the radios. It is not unusual for radio families to experience difficulties when introduced into service; the UK's BOWMAN is no exception to this. However, Russia's MoD has made various claims about the capabilities of its command and control (C2) network, indicating that target data can be shared very quickly between systems and that communication between units has been enhanced. For all of this to be true, it would require the Azart and Akveduk families of radios to be operating optimally and capable of supporting the transfer of significant data packets between units. The current operations in Ukraine suggest that Russia does not have as many modern radios in service as it has claimed, and that it may not have adequately considered its communication needs for the range and scale of operations conducted.

A Matter of Distance

In addition, there is the question of Russian forces using their mobile phones to communicate. This is not unusual for modern warfare; accounts of Ukrainian soldiers doing the same are plentiful. However, one story documented by Nicholas Laidlaw cites a captured Russian soldier who states, 'The officers started stationing themselves further and further away from the fighting ... they are out of radio range at this point, and no one can contact them'. The soldier proceeds to explain that a lack of long-range communications equipment was preventing anyone from contacting the Central Command of the deployed forces. It follows that some Russian soldiers may have resorted to the use of mobile phones to communicate with officers and each other in order to gain some situational awareness. It seems bizarre that units advancing into Ukraine during this dangerous phase of the operation would not be outfitted with the best equipment, including radios, that Russia's defence industry has to offer.

Vulnerabilities

BaoFeng UV-82HP

One of the most striking images from Russia's war in Ukraine so far has been the photograph of a civilian handheld radio. Although impossible to confirm, sources on social media said this radio had been captured by Ukrainian troops. Further inquiry hinted that the radio in question, a BaoFeng UV-82HP, had been purchased from suppliers in the People's Republic of China. The radio uses V/UHF wavebands and lacks military-grade encryption. Why it was reportedly in the possession of Russian troops is unknown. However, this triggered immediate speculation on the health and performance of RuAF radio communications.

One would assume that RuAF units in Ukraine would mostly be using the more advanced radios detailed above. It seems bizarre that units advancing into Ukraine during this dangerous phase of the operation would not be outfitted with the best equipment, including radios, that Russia's defence industry has to offer. Are new military radios being delivered to units in fits and starts, forcing them to improvise? Or worse, are these new military radios considered substandard? That troops may feel more confident using a cheap Chinese handheld radio would say much about the quality of Russian equipment.

At the time of writing (4 March), Russia's invasion of Ukraine is just one week old. Open-source information has raised questions about whether RuAF communications are fit for purpose. We must qualify this by saying that neither author is in Ukraine. Our analysis is produced from what we consider reliable open-source information and from our sources in theatre. Based on this information, we can paint a broad-brush picture of Russia's military communications situation, and that situation does not look good.

The electromagnetic spectrum does not always capture the interest and imagination of students of war or the public. The electromagnetic spectrum, where radio waves reside, is an environment humans cannot appreciate with their own senses. It is invisible, silent, odourless, flavourless and formless. Yet it matters. Commanders and personnel are an army's brain and its strike assets its limbs. Radio communications are its nervous system. Disrupt the nervous system and the brain and limbs communicate with great difficulty, or not at all.

Important clues are emerging regarding RuAF communications, hinting at potentially serious weaknesses. Radios like the BaoFeng UV-82HP will be relatively easy for electronic warfare (EW) practitioners to exploit. Firstly, their lack of discernible military-grade COMSEC/TRANSEC means the radios should be relatively susceptible to straightforward jamming. Secondly, this lack of COMSEC/TRANSEC could make it easy to feed false or misleading traffic into networks depending on these radios. This could pay tactical dividends for the Ukrainians, allowing them to sow disorganisation, doubt and demoralisation into Russian units. It is highly likely these radios are being used for squad communications at the tactical edge by dismounted infantry. Attacking networks at the tactical edge using these radios could help blunt or slow Russian manoeuvres.

Moreover, transmissions from these radios could be relatively easy to detect using rudimentary communications intelligence (COMINT) equipment. Once these transmissions are detected, COMINT systems could be used to follow the movement of the transmissions, and hence the movements of troops. Armed with this knowledge, Ukrainian forces could have a reasonable real-time picture of Russian dismounted troops moving within range of their COMINT equipment. This depends on those troops keeping their radios switched on and in regular use. Given the apparently lax communications discipline sources have said some Russian units have exhibited to date, this may well be the case. As noted above, open-source evidence also suggests that Russian troops are using mobile phones for tactical communications.

While Ukrainian forces may be numerically inferior on the battlefield, they have an opportunity to be superior in the electromagnetic spectrum. The employment of civilian communications by Russian manoeuvre units raises an interesting possibility. US sources expressed surprise after the invasion that Russian EW had not been more heavily employed. Once again, definitive answers as to why this is the case remain scant. It is reasonable to assume that inadequate numbers of EW systems and personnel were deployed into theatre. The equipment may be in a bad state of repair. These factors may combine in deterring commanders from employing electronic effects to their full potential. On paper, the RuAF can jam civilian V/UHF communications including two-way radios and mobile phone networks. The force's RB-314V Leer-3 EW system deployed at the operational/tactical level can reportedly target mobile phone transmissions. V/UHF transmissions can also be targeted by the RP-377U/UA EW systems that the RuAF deploys at the tactical level (Grau and Bartles, *The Russian Way of War: Force Structure, Tactics and Modernisation of the Russian Ground Forces*, 2016, pp. 289–300). Have Russian EW cadres refrained from a heavier weight of electronic attack to avoid friendly fire against the civilian communications their troops rely on? This theory must be entertained.

The discernible lack of COMSEC/TRANSEC is mirrored in the HF domain. Unlike V/UHF, HF can perform beyond line-of-sight communications. This is because it uses the ionosphere to bounce radio transmissions over-the-horizon. The RuAF in general place a high premium on HF. It is a favourite mechanism for long-range trunk communications, having a similar importance to SATCOM in NATO forces. The RuAF do have access to domestic military-grade SATCOM. However, the preference for HF is said to be due to the fact that high frequency radio is difficult – although not impossible – to jam (Withington, 'Thinking about the Unthinkable', in *Military Technology*, Issue 1, 2022). Online sources reveal not only that Russian military HF radio transmissions are relatively easy to find, but that they are made en clair without encryption. This appears seemingly oblivious to the danger that these transmissions may be intercepted and exploited for intelligence. This raises three possibilities. The first is that Russian military HF users may simply not care if eavesdropping takes place. The second possibility is that HF may be used to deliberately transmit false information; however, anecdotal evidence from the Ukraine theatre hints that intercepted traffic has correlated with Russian tactical actions. The third possibility is that the RuAF cannot encrypt their HF traffic. Encryption devices may not have been supplied to the forces en masse. Equally, those that have been supplied may be of poor quality.

Either way, Russia military HF is out there in the spectrum. With the right HF COMINT/COMJAM equipment, it can be detected, intercepted and the source of transmissions determined. While HF jamming is difficult, it is not impossible. Much like V/UHF radio, Ukrainian EW cadres could exploit Russian HF nets and jam them to impede command and control, or use them as a conduit for false, misleading and demoralising traffic. Determining the location of HF transmission sources could also let Ukrainian forces determine the position of Russian units. As HF is used for significant quantities of tactical/operational command level and operational/strategic level traffic, detecting and locating an HF radio may help betray the position of an RuAF command post. Engaging such a target kinetically would clearly help dislocate RuAF command and control, as would attacking it electronically.

Exploitable Vulnerabilities

The seemingly parlous state of RuAF communications creates an opportunity for Ukrainian forces. Lax communications discipline and deficient COMSEC/TRANSEC can be exploited by Ukrainian EW cadres. While Ukrainian forces may be numerically inferior on the battlefield, they have an opportunity to be superior in the electromagnetic spectrum. By detecting and locating sources of RuAF radio transmissions, Ukrainian forces can find, fix and engage the enemy kinetically and/or electronically. At the same time, via the use of COMINT equipment, Ukrainian forces can exploit Russian networks for intelligence and for battlefield deception. That said, the enemy has a vote, and it is imperative that Ukrainian troops ensure cast-iron communications discipline. The goal should be to preserve Ukrainian use of the electromagnetic spectrum while denying it to their opponents as far as possible. With the possibility of the war moving into a prolonged insurgency should Russia complete its occupation, Ukraine should look at utilising volunteers with radio, telecommunications and broadcasting expertise and experience. These cadres can be rapidly trained in EW techniques and thrown into the electromagnetic battle. EW is unlikely to defeat the RuAF by itself. Nonetheless, it is a valuable centre of gravity that Ukrainian forces should continue to exploit as a means of attacking Russian battlefield cohesion.

<https://rusi.org/explore-our-research/publications/commentary/russian-comms-ukraine-world-hertz>

Yours truly has a number of these cheapo Baofeng units. The UV82 I have allows coverage of the 2m/70cm bands, allowing me to exploit the repeaters as I travel. It has one other band 220 to 260MHz. Whilst the DAB+ stuff will never be resolved a quick connection to my RHCP 240 to 265MHz antenna allows me to listen to the Brazil pirates on this LoUHF SATCOM band. I doubt the Russian Mil will have an interest in listening to the Brazilians but they may well be able to input a signal into their Russian Equivalent satellites.

How western spy planes keep tabs on Russian tactics

One of the 'crown jewels' of British intelligence is helping Ukraine chart Putin's next moves

Larisa Brown
Defence Editor
Friday March 11 2022, 11.00pm, The Times

<https://www.thetimes.co.uk/article/how-western-spy-planes-keep-tabs-on-russian-tactics-8slcm0j22>

British and American spy planes are carrying out regular missions on the fringes of Ukraine's airspace, where RAF sources say they can try to monitor Russian communications on the battlefield.

Intelligence gathered by the RAF's three RC-135W Rivet Joint electronic surveillance aircraft, also known as Airseekers, is fed back to analysts in the Defence Intelligence (DI) team based at the Ministry of Defence in London, who combine it with other information to work out Vladimir Putin's next moves.

The aircraft use sensors to pick up communications and can locate where signals are coming from, helping to paint a picture of what is happening on the ground.

In theory, the crew could intercept radio transmissions from a convoy of troops a few hundred miles away, sources said. An RAF source added that they could pick up conversations from further afield depending on the transmitter. Foreign language speakers on board interpret transmissions, sending up-to-date intelligence back to analysts in London.

Publicly available flight trackers show Rivet Joint operations have intensified operations near Ukraine in recent months. An RAF Rivet Joint was flying over Poland on Friday. One RAF source said the Americans, who also operate such aircraft, consider them “one of the crown jewels” in terms of gathering intelligence. Rivet Joint would be just one string of many in a bow of intelligence gathering,” the source said.

Analysing all its data is a team of military intelligence officers based on the seventh floor of the MoD building in Whitehall, who are working around the clock to establish Russia’s battleplan.

Equipped with sensitive and commercial satellite data, along with intercepted communications, and aided by artificial intelligence, they are in a 24/7 “crisis” mode.

DI, which is rarely talked about, is made up of 5,000 staff, of which two thirds are military personnel and one third are civilians. Experts include linguists, civilian scientists, psychologists, geographers and data experts.

Resources have been shifted from elsewhere to bolster the unit focused on Russia, comprising hundreds of “collectors” of information and analysts. “As this has moved into crisis we’ve moved more people to support this. We’ve moved to a much more intensive 24/7 workforce,” a military intelligence source said.

At its helm is Lieutenant General Sir Jim Hockenhull, chief of defence intelligence. He was commissioned into the Intelligence Corps in 1986 and as a junior officer spent his early years focused on Russia. He was in Berlin when the wall came down in 1989. Few people can predict Putin’s next moves better. Hockenhull and his team have paid special attention to the region since April last year when Russia massed troops and hardware along the border with Ukraine. What they witnessed set alarm bells ringing in the West.

The source said: “We learnt last April of the build-up and as we developed our intelligence picture through autumn 2021 we became very concerned about the operations.”

DI provided the rest of the government — and its international partners across the world — early warning of Russia’s intent to invade Ukraine, many months before the conflict began.

Since the invasion started, DI has delivered “near real-time updates” to the government, foreign allies and, for the first time, the public on how the conflict is unfolding.

“We have always taken the Russian threat seriously,” the intelligence source said. “Russia has been a primary area of focus for a long time. That’s paid dividends now as we have a depth of experience, with some people having covered Russia for 20 years.”

In rare comments about the achievements of his team, Hockenhull told The Times: “The performance of Defence Intelligence during the current crisis is the culmination of a three-year transformation project. The breadth of influence and impact our dedicated staff have achieved in recent months is unparalleled in our history.”

Military personnel across MoD have been told by senior officers that there are three priorities across the department when it comes to the conflict. One is to support the flow of lethal aid, the second is to show Nato solidarity and the third is to “weaponise the truth”.

Defence sources said that as part of that, teams were working day and night to expose the reality of the situation on the ground. The MoD effort has been part of a wider one across Nato governments to use intelligence gathered to expose what Putin is up to and ultimately try and help save Ukraine.

The military source said: “We’ve worked hard to try and get more intelligence out there than ever before.”

When it comes to helping Ukraine on the battlefield, intelligence is giving its armed forces an edge over the Russians, according to analysts.

Earlier this month the White House confirmed that the US was sharing intelligence with Ukraine about the invasion “in real time”. Jen Psaki, the White House press secretary, said: “Without getting too far into details of what we do, for obvious reasons, we have consistently been sharing intelligence that includes information the Ukrainians can use to inform and develop their military response to Russia’s invasion.”

“Almost certainly the UK will be doing the same,” said Philip Ingram, a former senior military intelligence officer, adding that many of the UK and US assets worked together.

Ingram said Russia’s failure to make the gains it would have liked in Ukraine was partly due to its lack of intelligence.

“The battalion tactical groups don’t understand how to work together,” he said, adding that intelligence was gathered by the GRU, Russia’s foreign intelligence agency, and not fed down properly. “They are going in blind and just reacting to orders,” he said.

Russian forces are also ill-equipped, with western officials saying some of them are using commercial radios and phones to communicate, which are easier to intercept.

Intelligence products produced by DI, such as imagery analysis, have been used as part of efforts to hold Russia to account. Its use of social media — which aims to provide the public with accurate information and counter Russian disinformation — has been viewed more than 50 million times.

DI has “collectors” of information, people who gather intelligence through a variety of means. They are based in the UK and countries across the world. It also has analysts who examine the information and another team that assesses sources and pulls in all the information. DI uses image-recognition technology to help speed up the analysis of satellite imagery and machine translation to allow the rapid reading of foreign language material.

Sources for information within defence intelligence have shifted in recent years, with experts relying less on traditional methods such as secrets from insiders. Experts now rely more on information from military platforms such as Rivet Joint, intelligence agencies such as MI6 and GCHQ, open-source information, intelligence from partners, insights from academia, and the media.

“This creates a fused picture of our understanding. We have lots of people, highly skilled and well-trained, some of whom have looked at the region for a long time. They bring experience and insight so when they are looking at a complex picture it enables them to make more sense of it,” the military intelligence source said.

In recent years money has been spent to bolster the MoD’s ability to carry out intelligence, surveillance and reconnaissance, including into the Rivet Joint aircraft, which are being maintained to the same standard as the American aircraft.

The intelligence source said: “All of those investments in defence are then brought together with that analytical element. It needs to work as a system. There is no point in collecting if it is not going to be analysed. In this crisis we are seeing much of that paying off as we’ve been remarkably successful.”

Intelligence assessed is given a confidence level with a percentage for how likely it is, based on a “probability yardstick” applied across the intelligence community.

Military intelligence is then handed to the Joint Intelligence Organisation (JIC), which also takes into account other information from security agencies, diplomats and open-source material, before reporting to the National Security Council (NSC).

Last year Hockenhull said there had been a move away from reliance on traditional classified intelligence-collection methods towards the exploitation of open-source information and commercial services, as well as the use of machine learning and artificial intelligence to process the “deluge of information” now available to intelligence analysts.

Information from satellites — both top secret ones and commercial ones — is crucial. Commercial Earth observation satellites do not generate images with the same resolution as those produced by military reconnaissance satellites.

However, Hockenhull said: “Private sector satellites are more numerous and resilient: they take more pictures than [their military equivalents], so you can’t dismiss them.” He added that the analysts needed a way to manage a “deluge of information” and had ambitious plans for developing automation.

<https://www.thetimes.co.uk/article/how-western-spy-planes-keep-tabs-on-russian-tactics-8slcm0j22>

An excellent piece indeed; worth looking at for the graphics.

The Russian Army and Electronic Warfare

<https://www.thaienquirer.com/38210/analyzing-the-russian-armys-electronic-warfare-capabilities-in-its-invasion-of-ukraine/?s=09>

Russian Army EW doctrine focuses on detected and attacking radio transmissions in frequencies of three megahertz/MHz to six gigahertz/GHz. In addition, the doctrine stresses electronically attacking hostile airborne radars. The latter are targeted by jammers covering frequency bands of one gigahertz up to 18GHz. Jamming airborne radars is an important part of Russian EW doctrine. Military aircraft use X-band radars (8.5GHz to 10.68GHz) to detect targets in the air, on the ground and at sea. These radars provide fire control for air-to-air and air-to-surface weapons. Russian Army logic is to protect deployments and targets on the ground by jamming airborne radars to deprive military aircraft of fire control information.

Beyond airborne radars, Russian Army EW doctrine prioritises detecting and jamming enemy military radios. Military radios use High Frequency (HF: three megahertz to 300MHz), and Very/Ultra High Frequency (V/UHF: 30MHz to three gigahertz) signals for Command and Control (C2). Russian Army EW strives to attack hostile military radio networks to deprive the enemy of C2 and situational awareness. The desired result is for enemy C2 to become badly coordinated, if not impossible. If enemy radio networks are attacked, hostile unit commanders cannot share their situation with higher echelons. Headquarters are thus deprived a reliable, real-time picture of what is happening in the battle. Attacking these networks has a secondary but equally important benefit. It makes it difficult for commanders to distribute orders to subordinate units based on the prevailing situation. To summarise, land EW prevents enemy commanders from accurately reading the battle and responding accordingly.

Like all land forces, the Russian Army uses its EW systems to detect and intercept hostile radio transmissions so they can be exploited for intelligence. Every land forces unit from an infantry squad upwards uses radios. Almost any vehicle from main battle tanks to surface-to-air missile units supporting the manoeuvre force also needs radios as do deployed headquarters. Detect and locate these radio transmissions and you can detect and locate these units, vehicles and headquarters making them. This information can provide real time details of where hostile units are at any moment. It is easy to see how useful this is from a targeting point of view when manoeuvring.

A Russian Army RB-341V Leer-3 system seen here in convoy in the Ukrainian theatre of operations. This system is used for operational-level cellphone and V/UHF jamming.

It may also be possible to decrypt the opposing force's radio traffic which will invariably have some measures in place to stop eavesdropping. These measures are known in EW jargon as COMSEC/TRANSEC. (Communications/Transmission Security). If they can be cracked it maybe possible for this radio traffic to be exploited for intelligence. This could yield important information on hostile intentions, troop movements and the enemy force's situation. Army EW is a compromise. On one hand, there is an imperative to attack hostile radio communications to deprive the enemy of C2 and situational awareness. On the other, there maybe an imperative to leave radio communications untouched. This will let hostile radio networks be exploited for intelligence.

Given the frequencies that Russian Army EW capabilities cover, they can potentially be used to attack civilian radio transmissions. The military are not the only users of HF and V/UHF radio. Cellphone networks, broadcasting, satellite communications, first responder radio and air traffic control all rely on V/UHF radio. GNSS (Global Navigation Satellite Signal) navigation and timing signals use UHF transmissions of 1.1GHz to 1.6GHz. Whereas military radio and GNSS signals are protected using COMSEC/TRANSEC techniques like encryption, this is not always the case with civilian radio traffic. As such, it may be targeted deliberately by Russian Army EW. This may prevent cellphone networks or civilian GNSS signals being used by the military. It may also be done as part of a wider information warfare strategy. For example, enemy media outlets may find their radio or television broadcasting jammed. This may be done to demoralise the population. Likewise, HF radio may be jammed. Amateur radio enthusiasts, known as 'radio hams', use high frequency radio for their hobby. They may find their communications come under attack both as a side effect of HF jamming and to prevent amateur radio being used to assist the military.

The Russian Army's EW Order of Battle

The Russian Army deploys its EW assets at the operational and tactical levels. Operational level EW units are organised into EW brigades, battalions and companies. Each have distinct tasks supporting different levels of war.

The EW Brigades are independent army units providing operational/strategic electronic warfare to their parent military district. As well as assisting the land battle, these units assist Russian ground-based air defence. This also seems to be the case for the military districts' Independent EW Battalions. Tactical electronic warfare is provided by the EW Companies equipping Russian Army manoeuvre formations.

A typical Independent EW Brigade will perform electronic warfare over a large part of the theatre of operations. It appears they are tasked with jamming hostile airborne radar, cellphone networks and HF radio communications. Details of the EW systems comprising an Independent EW Brigade are listed in the table below:

System	Role	Estimated Frequency Coverage	1 x Murmansk-BNGathers	Communications Intelligence (COMINT)	and performs Communications Jamming (COMJAM) on HF radio	3MHz – 30MHz	1 x RB-341V Leer-3	Cellphone and general V/UHF	COMINT/COMJAM	30MHz – 3GHz	1 x IL269 Krasukha-2	0.Jamming of airborne radar	1GHz – 2GHz	1 x 1RL257 Krasukha-C4	Jamming of airborne radar	8.5GHz – 18GHz	1 x IL267 Moskva-1	COMINT/Passive Radar	30MHz – 18GHz
--------	------	------------------------------	------------------------	--------------------------------------	--	--------------	--------------------	-----------------------------	---------------	--------------	----------------------	-----------------------------	-------------	------------------------	---------------------------	----------------	--------------------	----------------------	---------------

Russian Army manoeuvre units like motorised rifle regiments, brigades and divisions and tank brigades are sometimes furnished with an attendant EW Company. Open sources state that not all manoeuvre formations have organic EW companies. Where they are absent, it is assumed that these formations must rely on EW provision from the Independent EW Brigades and Battalions at the military district level. EW companies provide electronic warfare support at the tactical level. This is to help the manoeuvre unit meet its tactical objective. Russian Army EW companies deploy large quantities of systems covering disparate wavebands. The order of battle of a typical Russian EW Company is detailed below:

System	Role	Estimated Frequency Coverage	1 x RP-330KPKEW	Company	C2	Not Applicable	1 x R-330KEW	Company	C2	Not Applicable	2 x R-325UMVHF COMINT/COMJAM	1.5MHz – 30MHz	2 x R-378BHF	COMINT/COMJAM	1.5MHz – 30MHz	2 x R-330BVHF	COMINT/COMJAM	30MHz – 100MHz	1 x R-330ZGNSS	Jamming and general V/UHF	COMINT/COMJAM	100MHz – 420MHz	21 x RP-377U/UVV/UHF	COMJAM	30MHz – 3GHz	2 x R-934BVHF	airborne radio	COMJAM	20MHz – 2GHz
--------	------	------------------------------	-----------------	---------	----	----------------	--------------	---------	----	----------------	------------------------------	----------------	--------------	---------------	----------------	---------------	---------------	----------------	----------------	---------------------------	---------------	-----------------	----------------------	--------	--------------	---------------	----------------	--------	--------------

Some of the systems used by the Russian Army's EW brigades and companies are vehicle mounted. Others like the RP-377U/UV are housed in a backpack. Apart from the RP-377U/UV systems, it is thought that Russian Army EW systems can only be used when stationary. This could mean they cannot advance alongside the manoeuvre force. On the other hand, they could provide an umbrella of EW coverage over large parts of the theatre (EW Brigade) or the brigade, division or regiment (EW Company).

Confusingly, Russian order-of-battle information lumps some of these systems together as a single system or 'complex'. For example, the Borisoglebsk-2 HF/VHF COMINT/COMJAM system includes five distinct components. These include the R-330PK C2 system, the R-378B, R-330B, R-934B and R-325U. The number of these latter four systems in an EW Company can be scaled up or down according to tactical requirements. Our table above includes a Borisoglebsk-2 system at its full strength with a single C2 system and two each of the COMINT/COMJAM systems. The graphic below illustrates the approximate COMINT and COMJAM coverage that six of the Borisoglebsk-2's jammers could cover.

This graphic shows the approximate area of coverage against ground-based emitters which could be covered by six of the Borisoglebsk-2's jammers.

For example, each jammer could cover a surface area of approximately 907 square kilometres (350 square miles). As we have illustrated in our graphic above, six Borisoglebsk-2 jammers could potentially detect and jam ground-based radios across a 5,442 square kilometre (2,101 square mile) area. However, we should stress that this is by no means an exact figure. Also, military radios and other emitters like ground-based military radars will use COMSEC/TRANSEC measures and protected waveforms as a riposte. Nonetheless, Armada has learned that the R-330B and R-934B components may have some potential jamming frequency-hopping VHF radios performing up to 300 hops per second. The R-378B and R-325U are thought to be capable of jamming frequency-hopping HF transmissions at up to 30 hops-per-second. The R-330PK C2 system can handle up to 30 jamming tasks simultaneously.

Detection and jamming ranges expand at the operational level when using Uninhabited Aerial Vehicle (UAV) based EW systems like the RB-341V Leer-3. The Orlan-10 UAVs equipping the system have a maximum altitude of 16,404ft (5,000m). This lets them cover an area of 266,582 square kilometres (102,928 square miles).

The Story So Far

Armada assesses that the Russian Army may have deployed up to six Independent EW Brigades, three Independent EW Battalions and two EW companies to the Ukraine Theatre. We believe these may include the following units:

Military DistrictIndependent EW BrigadeIndependent EW BattalionArmy FormationEW CompanyWestern15th16th49th328th1st Guard Tank ArmyNIL 6thCAA511th EW Company (part of the 138th Guards Motorised Rifle Brigade)20th CAANILSouthern19thNIL8th CAAANIL 49th CAANIL58th CAA141st EW Company (part of 136th Independent Guards Motorised Rifle Regiment)Eastern17thIndependent EW Battalion29th CAANIL 35th CAANIL36th CAANILCentral18thNIL2nd Guards Tank ArmyNIL 41st Guards Tank ArmyNILBlack Sea Fleet475thNIL22nd Army CorpsNIL

The graphic below illustrates the hypothetical land area these EW brigades, battalions and companies could cover based on our estimations of their jamming and detection footprints, and estimated locations of their parent CAAs as of March 3.

Definitive information on the effectiveness of these units is scant. Nonetheless, some tentative conclusions can be drawn. On February 25, CNBC quoted an unnamed US defence official who said “we do not believe that the Russians have not employed the full scope of their electronic warfare capabilities, and it is not clear exactly why.”

This succinct summary underlines some surprising aspects of the conflict’s EW dimension to date. At first blush, it seems that the civilian world has not suffered as much as feared by Russian Army EW. There does not appear to have been any sustained efforts to deny Ukraine writ large access to the radio spectrum. Media satellite transmissions from Ukraine to the outside world appear to continue uninterrupted. Cellphone video footage sent from Ukraine indicates that local telecommunications networks have largely continued as before. Several Armada sources in Ukraine said their cellphone coverage has remained mostly unaffected. The Russian Army’s primary systems targeting cellphone networks is the RB-341V Leer-3. Regardless of whether it has been used sporadically or in a sustained fashion, it seems to have had little effect so far. It is possible that Russian Army COMINT cadres want to leave cellphone coverage unjammed to exploit any cellphone traffic. Given how effective cellphones are in helping organise armed resistance it is hard to see why the army has left this alone. Perhaps Russian communications jamming technology is not as effective as previously thought?

 Pictures surfaces on social media on 28th February of captured civilian handheld V/UHF radios reportedly used by Russian troops. Their possible use seems to indicate lackadaisical V/UHF jamming by Russian EW units.

It is noteworthy that pictures circulated on social media on 28th February showed what appeared to be captured civilian V/UHF handheld radios. These were said to have been captured from Russian troops. There was some speculation that these radios were manufactured in the People’s Republic of China. It is a safe bet that these radios are not at the leading edge of telecommunications technology. As such, they should be very easy to jam. The use by Russian forward units of such basic technology raises some interesting questions, not least about the health of Russian Army tactical communications. These questions will be dealt with in later articles. From an EW perspective, it may illustrate lacklustre jamming performance. Such rudimentary radios should be a piece of cake to jam. Anecdotal evidence from Russia’s previous intervention in Ukraine from 2014 divulged that electromagnetic fratricide was rife. Russian V/UHF jamming regularly shut down the radio communications of Russian troops in range of the jammer. Surely troops using would find these radios all but useless if V/UHF jamming was supporting their manoeuvre. Russian doctrine stresses EW as an integral part of manoeuvre. There is an apocryphal adage that summarises Russian Army doctrine; “atrit a third, jam a third and the remain third will collapse.” This use of civilian standard V/UHF communications seems to suggest that either V/UHF jamming is not being used, being used sporadically and/or is useless.

There has been speculation that the Russian Army is husbanding its EW capabilities for use later in the conflict. That is possible but seems counterintuitive. Surely the manoeuvre force would want to use the full panoply of its EW capabilities during the initial invasion, arguably the riskiest part of the operation? This is when depriving Russia’s adversaries of radio communications networks and airborne radar would be an absolute priority? Does this mean that Russian Army EW systems and personnel are struggling? It may mean that army commanders have little confidence in their EW abilities and are loath to rely on them. Likewise, are these systems unreliable or have poor levels of maintenance which degrades their efficacy?

 This screen capture from the FlightRadar24 website clearly shows that aircraft overflying Ukraine and Belarus are keeping their transponders switched off. Some people on social media suspected that the loss of coverage of Ukrainian territory on aviation tracking websites like flightradar24 was the result of Russian GNSS jamming. This seems unlikely. Ukrainian civilian aircraft rapidly cleared from Ukrainian skies as the invasion unfolded. Civilian and military aircraft use transponders to share information with air traffic controllers. Transponders share details of the aircraft’s identity and flight characteristics. This can be supplemented with information from the aircraft’s GNSS systems.

However, it seems that GNSS signals over Ukraine were not jammed en masse. Transponder information from other aircraft flying near Ukraine’s borders was unaffected. Large-scale, theatre-level GNSS jamming would have almost certainly spread beyond Ukraine’s borders. What appears to have happened is that Ukrainian and Russian military aircraft flying over Ukraine kept their transponders switched off. This is standard wartime procedure. If you detect a transponder’s transmissions you can determine an aircraft’s location. This risks the aircraft being found and engaged by fighters or surface-to-air weapons.

Russia does have form jamming GNSS transmissions. This has been noted during the country’s deployment to Syria. As this month’s Spectrum SitRep article notes, the Israeli government recently complained to its Russian counterpart about GNSS jamming emanating from Syria. This was affecting civilian air traffic over Israel.

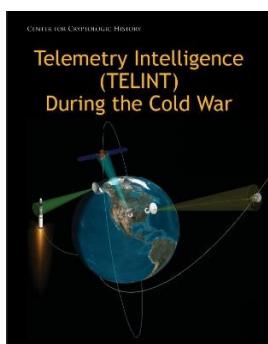

Conclusions

So far, the Russian Army’s electronic warfare acumen seems a shadow of its former self. As Armada reported in December 2019, it acquitted itself well during Russia’s first invasion. Russian Army EW continued to cause problems for the Ukrainian military in the following years. The stubborn resistance of the Ukrainian Army and population in general indicates it is less effective this time around. Russian Army EW equipment maybe under-performing and may not have the confidence of army commanders. This can only be good news for Ukraine as it fights tenaciously to repulse Russia’s invasion.

Norwegian Photographer Suspected of Espionage Arrested on Greece's Lesvos

By Tasos Kokkinidis
March 18, 2022

<https://greekreporter.com/2022/03/18/norwegian-photographer-espionage-arrested-greece-lesvos/>

Bry has won a number of photographic awards, among them Photographer of the Year in the United States in 1986 and in Norway in 1989. Internationally acclaimed Norwegian photographer Knut Bry was arrested on the Greek island of Lesvos on Thursday, suspected of espionage.

According to local media stonisi, he was arrested for taking pictures of the Greek Coast Guard and Navy vessels.

Citing Coast Guard sources, the local news website notes that the vessels were in the photographs he shot. During a search of his home in the presence of a judicial representative, electronic archives with photographs were seized, and are now under examination.

"He has been referred to the First Instance prosecutor of Mytilene with heavy felony charges for espionage and received 24 hours to prepare his testimony," stonisi reports. He will testify on Friday.

He has visited Lesvos several times in the recent past and has campaigned for migrants and refugees crossing into the Aegean island from the Turkish coast. He has been critical of Greece's policy on migration accusing Greek authorities of migrant pushbacks.

The United Nation's refugee agency (UNHCR) has called for Greece to stop pushing back migrants who are attempting to seek asylum in the country.

Greek politicians denied the accusations that such pushbacks were taking place, saying that the UNHCR has been misled by Turkish propaganda. Turkey recently bolstered its claims that Greece was responsible for the deaths of migrants pushed back from its borders.

Bry is a volunteer for the Lesvos Solidarity group, a human rights group catering to the welfare of migrants and refugees arriving on Lesvos.

In a Facebook message, the group announced his arrest and noted: "Bry was arrested in the port of Mytilene, where he was shooting for his next book on the landscapes of Lesvos! Knut above all loves the island and its people as he is always been next to those in need with his lens and his special look. The Knut case is, unfortunately, another example of the unjustified criminalization of innocent people."

The spy who came to lunch: Ireland and Russia during the Cold War

Updated / Thursday, 7 Jan 2021 11:55

<https://www.rte.ie/brainstorm/2020/1120/1179406-ireland-russia-soviet-union-cold-war/>

Analysis: while determined to remain neutral, Ireland could not remain aloof from the potentially devastating implications of the Cold War

By Eoin Kinsella, Royal Irish Academy

As a new world order emerged from the ashes of World War II, Ireland's diplomatic service swiftly adapted to the reality of a global stage dominated by the United States and the Soviet Union. These were two superpowers with sharply opposing ideologies and growing nuclear arsenals. In recognition of the need to repair relations that had been damaged by its neutrality during the war, Irish foreign policy shifted towards multilateralism and engagement, epitomised by an application to join the United Nations in 1946. However, the realities of Cold War politics intervened, with Irish membership of the UN blocked by the USSR until 1955.

The impact of the Cold War threads subtly through Volume XII of Documents on Irish Foreign Policy, which covers the lifetime of the 17th Dáil (October 1961 to April 1965). While determined to maintain its neutrality (an attitude that caused difficulties for its first application to join the EEC), Ireland could not remain aloof from the potentially devastating implications of the Cold War.

The realities of Cold War politics intervened, with Irish membership of the UN blocked by the USSR until 1955

Mindful of the need to maintain good relations with Western powers, yet determined to forge an independent path, Irish policy at the UN in the late 1950s and early 1960s was underpinned by a concerted push for nuclear non-proliferation and disarmament. That policy bore fruit on December 4th 1961 when the UN General Assembly adopted Resolution 1665 (XVI) – commonly known as the 'Irish resolution' – which called upon all member states to agree to prevent the spread of nuclear capability to states not already in possession of a nuclear arsenal. Two years later, Ireland was a firm supporter and signatory of the Nuclear Test Ban Treaty, which prohibited the detonation of nuclear weapons in the atmosphere or underwater.

In January 1962, Ireland began a temporary, year-long membership of the UN's most important body, the Security Council. The defining event of its tenure, and one of the most important in the Cold War, arrived in October 1962 when the Kennedy administration dramatically confronted the government of Nikita Khrushchev over the build-up of Soviet military strength in Cuba. Issuing an ultimatum for its withdrawal, American forces initiated a blockade of the island and sought international approval.

Taoiseach Seán Lemass was quick to assure the American administration of Ireland's support, an assurance that was immediately drawn upon. Both Lemass and Frank Aiken (Minister for External Affairs) were absent from Dublin in late October, leaving Sheila Murphy, Assistant Secretary at the Department of External Affairs, to handle the initial Irish response.

Murphy dealt with requests from the United States, Britain and Canada for copies of all manifest data and for searches to be made of all Cuban and Eastern Bloc flights that landed at Shannon airport en route to Cuba. The latter request raised some delicate legal matters regarding the authority under international treaties of the Irish government to conduct searches, with the resolution of the crisis in early November effectively rendering the point moot.

Just a few months later, in February 1963, the Soviet trawler Paltus was taken into custody in Waterford harbour and its crew arrested for illegally fishing within Irish territorial waters. The fallout required some careful diplomatic manoeuvring. Following receipt of a note on the incident from the Soviet Embassy in London, the Department of External Affairs' response had to be carefully worded to avoid any 'recognition by implication' of the Soviet annexation of Latvia. Ireland had tacitly recognised the Soviet Union when supporting its admission to the League of Nations in 1935, but maintained no diplomatic presence in Moscow or, indeed, in any country east of the Iron Curtain throughout the 1960s.

Though Dublin may not have been a hotspot of espionage during the 1960s, and Ireland hardly a high priority target for either side's covert operations during the Cold War, Ireland's diplomatic corps were required to tread carefully in their dealings with Russian diplomats.

In the final days of December 1963, Boris Zhiltsov, a third secretary at the Russian embassy in London, spent some time in Dublin. Shortly after his departure, the Department of Justice wrote to Hugh McCann, Secretary of the Department of External Affairs, to say that Zhiltsov had been observed acting suspiciously. Moreover, Justice had recently learned that Zhiltsov (aka Boris Skoridov) held the rank of Major in the Russian intelligence service. It was advised that Ireland's ambassador in London, Con Cremin, should be informed 'so that Zhiltsov may be treated with circumspection in any dealings with him'.

Ireland's diplomatic corps were required to tread carefully in their dealings with Russian diplomats

In early 1965, the first secretary at the Irish embassy in London, Andrew O'Rourke, was invited to lunch by Vyacheslav Dolgov, an attaché in the Soviet embassy's political section. While much of their conversation was relatively mundane, O'Rourke reported that Dolgov repeatedly emphasised Moscow's interest in developing deeper relations with the Irish government, and hinted at their willingness to see a diplomatic mission established in Moscow.

O'Rourke's response – that as a small nation Ireland could not maintain a diplomatic presence in every country – was the standard response offered to countries with which the Irish government had no desire to establish formal relations. It was not until 1974 that an Irish embassy was established in Moscow.

Why are Russian military aircraft flying in Irish controlled airspace?

Updated / Monday, 8 Jun 2020 12:43

By Professor Ray Murphy
NUI Galway

<https://www.rte.ie/brainstorm/2020/0318/1123836-russian-military-aircraft-bombers-ireland/>

Analysis: there have been reports of incursions of Russian bombers like the Tupolev TU-95 in airspace controlled by Ireland.

There have been a number of recent incursions into Irish controlled airspace by the Russian air force. Most recently Tupolev TU-95, the so called "Bear" strategic bomber aircraft, triggered UK Royal Air Force fighter jets to scramble in order to confront the Russian aircraft. Reliable sources indicate that there is an agreement between the UK and Ireland permitting the Royal Air Force to enter Irish airspace if deemed necessary, though the specific nature of this arrangement is not clear.

Like much of Russia's current military equipment, the Tupolev bombers are quite old, having come into service in the early 1950s. Although it is the only propeller powered bomber still in operational use today, it is far from obsolete and, like the United States B-52 bomber, it is planned to be in service for some time to come.

So what were these Russian bombers doing in airspace controlled by Ireland? It is important to emphasise that they did not violate Irish sovereign airspace as such and that the Irish Aviation Authority are responsible for a much larger area than this. Nevertheless, such behaviour by Russian aircraft is reckless and dangerous, especially when they turn off their transponders, making them effectively invisible to civil aviation surveillance systems. Although somewhat provocative owing to the nature of the aircraft and the proximity to UK and NATO airspace, any reasonably minded person could not perceive this as posing any significant military threat by Russia.

Former NATO Supreme Commander in Europe, Admiral James Stavridis, has speculated that the Russians were testing a strategically important "gap" that controls the entrance to the North Atlantic and transatlantic commerce. Most likely, they are probing NATO and UK responses in particular. Relations between NATO and Russia have been strained for some time, due mainly to NATO's expansion into what was traditionally viewed as Russia's backyard. They may also wish to antagonise the UK and its allies, and sow discord within the alliance. At present, there are differences among NATO members as to what is an appropriate response. One thing is clear: this is not the result of a navigation error by Russian pilots.

In the past, incidents of this nature have prompted calls for Ireland to acquire the capability to intercept incursions by foreign military aircraft. Commenting on this recently, retired Major General Ralph James of the Irish Air Corps indicated that Ireland would need to invest in at least 15 fighter aircraft, as well as support crews and infrastructure, to counter such threats. However, this would cost the Irish exchequer a great deal of money. In fact, the purchase of such aircraft is only part of the overall cost, as the purchase and maintenance of an up-to-date air defence system to accompany this is also prohibitively costly.

NATO members such as Belgium, Denmark, Norway and Portugal all have significant air defence capability, but they are part of a military alliance that requires such commitments. Ireland is not a member of NATO and as yet the EU has not adopted a common defence policy.

The case of the much wealthier Switzerland, a nation known to take its neutrality seriously, is an interesting example. In 2014, Swiss voters rejected a plan to purchase 22 Swedish Gripen jets from Saab for CHF 3.1 billion (€2.94 billion), overturning an earlier decision by the Swiss parliament. The Swiss government has since confirmed plans to acquire new fighter jets for around CHF6 billion (€5.68 billion) over the next few years, but a vote on this may also be taken before any purchase agreement is signed. The purchase of Eurofighter Typhoon fighter jets by Austria, another neutral country, also proved controversial and expensive.

It is almost certain that a similar proposal would be rejected if it was put to the general population of Ireland in a referendum. With a health and housing crisis, along with greater awareness of the need for climate action, it would not make sense to spend large amounts of exchequer funding on fighter aircraft. Even if we did, Ireland is not part of any military alliance and it would stand no chance of repelling an attack from a state with the military capabilities of Russia. Nevertheless, it is worth remembering that such a threat is low on the scale of security issues currently confronting Ireland.

Among the main threats identified in the 2015 White Paper on Defence were inter and intra-state conflict, terrorism, cyber attacks and espionage. The paper also declared natural disasters, cyber security and pandemics (such as the coronavirus) as national security issues.

Cyber attacks in particular can cripple a country's electronic infrastructure, including the wide range of network connected devices and systems that control or operate critical national infrastructure. There is evidence of such attacks and interference in elections by Russia, making attacks of this nature a more immediate threat to Ireland than violation of air space. There is no emphasis on air defence in the White Paper, and it concludes that the Air Corps will continue to operate a

range of rotary and fixed wing aircraft to allow it continue to undertake the required military operations and to deliver a broad range of air supports to other government departments and agencies.

Russia violates these protocols by switching off transponders on military aircraft

In 2014, the Minister for Defence admitted in the Dail that the Air Corps was not tasked or equipped for monitoring or responding to unauthorised aircraft overflying Irish airspace. He described it as unacceptable for large aircraft to travel through international air space that is the responsibility of the Irish Aviation Authority without informing it and with the transponders deliberately turned off.

The Irish Aviation Authority has invested significantly in modern equipment, but it still relies on the co-operation of the military in order to monitor the whereabouts of military aircraft. There are agreements that states have signed to ensure maximum aviation safety. Russia, or any other state that violates these protocols, especially by switching off transponders on military aircraft, should be held to account for endangering other civil aircraft.

Germany charges army reserve officer with spying for Russia

Ralph G was allegedly passing information to Russian spy agencies between 2014 and 2020.

Published On 1 Apr 2022

1 Apr 2022

<https://www.aljazeera.com/news/2022/4/1/germany-charges-army-reserve-officer-with-spying-for-russia>

An officer in the German army reserve has been charged with spying for allegedly passing information to Russian intelligence services between 2014 and 2020, according to federal prosecutors.

The man, referred to as Ralph G, is suspected of supplying information on the German military's reserves, "civil defence", the effect of sanctions levelled against Moscow in 2014, and the Nord Stream 2 gas pipeline project between Russia and Germany, the federal prosecutor's office said in a statement on Friday.

The accused had been "in contact with a Russian intelligence service through various people since October 2014 at the latest", prosecutors said.

Until March 2020, the suspect is said to have passed these contacts "documents and information on numerous occasions", relating both to the army reserve and business.

Alongside his role in the reserve, the suspect "belonged to several German business committees" thanks to his civilian profession.

He is also said to have shared the "personal data of high ranking members of the Bundeswehr [the German army]" and figures from the business world, "including contact details".

"In return for his services, the accused received invitations to events organised by the Russian government agencies," prosecutors said.

The trial is to take place at the Dusseldorf Higher Regional Court. The accused is not in custody.

Previous cases

Ralph G is the latest in a string of suspected Russian spies uncovered on German soil.

Russian scientist Ilnur Nagaev is currently standing trial accused of spying for Moscow while working at a German university.

Nagaev, who was stopped by authorities last year, is accused of having shared information about Europe's Ariane space rocket programme with Russia's foreign intelligence service SVR.

In October 2021, a German man was handed a two-year suspended sentence for passing on floor plans of parliament buildings to Russian secret services while employed by a security company.

Last August, a former employee of the British embassy in Berlin was arrested on suspicion of having passed on documents to Russian intelligence.

Dissident links led to Russian diplomats' expulsion

John Mooney

Sunday April 03 2022, 12.01am, The Sunday Times

<https://www.thetimes.co.uk/article/dissident-links-led-to-russian-diplomats-expulsion-vj9fr83b>

The decision to expel four Russian diplomats was taken in response to increased espionage by the Kremlin, including efforts to cultivate contacts with dissident republicans and loyalist paramilitaries in efforts to undermine confidence in the European Union.

Russia's intelligence services are encouraging fringe groups and paramilitaries in Northern Ireland to stoke social unrest. Russia is also amplifying sectarian and hate speech posted online by loyalists who oppose the Northern Ireland protocol, to undermine trust in governing institutions.

One of the four diplomats ordered to leave the state last week was a Russian military intelligence officer working under diplomatic cover out of the Russian embassy on Orwell Road in Dublin.

The GRU, still widely known as the GRU, is the main Russian agency spearheading Moscow's efforts to stoke political unrest in Northern Ireland and the Republic through subversion and active measures, the type of political warfare employed by the KGB during the Cold War.

It has used third parties known as “useful idiots” in security parlance to contact disaffected loyalists, but Russian diplomats have also been observed meeting republicans under the guise of discussing history at public meetings and lectures.

Russia’s efforts to support paramilitaries and their supporters on both sides of the political divide in Northern Ireland is part of its wider effort to undermine the European Union by causing tensions about Brexit and the introduction of the Northern Ireland protocol, according to intelligence and defence analysts. Russia has spread false information in the past about interactions between Arlene Foster, the former DUP leader, and Michel Barnier, the EU’s chief Brexit negotiator.

Russian operatives have also disseminated rumours online that the Real IRA was recruiting Islamist militias.

The names of the four diplomats ordered to leave the state were provided to the government by the security and intelligence branch of garda headquarters and J2, the intelligence branch of the Defence Forces. For security reasons the government was not provided with the specifics of why the four were chosen, but was generally briefed, according to government sources.

Last week’s expulsions were also aimed at reducing the “footprint” of Russia’s intelligence services on Irish soil. The Department of Foreign Affairs does not intend to allow the Kremlin to replace the four expelled diplomats, though sources said that this was unlikely to thwart Russian espionage in Ireland as they will be replaced by illegals — sleeper agents working undercover.

The government has previously revoked planning permission granted to the Russian embassy to expand its Orwell Road complex, citing national security grounds, though the Kremlin is trying to have the decision overturned.

The existing embassy complex is used for the collection and analysis of intelligence gathered not only in Ireland but across Europe. There are 30 accredited officials working at the Russian embassy in Ireland. Only six officials are based at the Irish embassy in Moscow

The Russian embassy last week described the decision to expel its diplomats as arbitrary and groundless, saying it would further deteriorate the already strained Russian-Irish relationship, which it said was damaged by Ireland’s support of sanctions. In a statement on Twitter, the embassy said the move would not go unanswered.

Brit in Berlin ‘handed over secret files to the Russians’

Metro (UK) 8 Apr 2022 By FLORA THOMPSON

<https://www.pressreader.com/uk/metro-uk/20220408/281925956542019>

A SECURITY guard at the British embassy in Berlin passed secret information about the government to a Russian military attache, a court was told.

Alleged spy David Smith is accused of gathering classified material ‘thought or intended to be useful to an enemy, namely the Russian state’.

The 57-year-old Brit denied nine offences under the Official Secrets Act at Westminster magistrates’ court yesterday.

They relate to when he was living in Potsdam between October 2020 and August last year.

It is claimed Smith ‘attempted to communicate’ by letter with ‘Gen Maj Sergey Chukhurov, Russian military attache based out of the Russian Embassy, Berlin’.

The material ‘contained details about the activities, identities, addresses and telephone numbers of various members of Her Majesty’s Civil Service’.

Smith is accused of collecting classified information ‘prejudicial to the safety and interest... of Her Majesty’s Government’.

He also allegedly made unauthorised photocopies of documents and video recordings of the embassy’s CCTV system. The charges also claim he gave information about building repairs at the embassy after being approached by someone he ‘believed to be a member of Russian Military Intelligence (the GRU)’.

Smith was arrested in August by German police and extradited to the UK earlier this week. Flanked in the dock by two plain-clothes guards, he confirmed his name, adding he no longer has an address.

He was remanded in custody and is due to appear at the Old Bailey on Wednesday.

Thanks 'E'

Morse Stations

All frequencies listed in kHz. Freqs are generally +- 1k

This is a representative sample of the logs received, giving an indication of station behaviour and the range of times/freqs heard. These need to be read in conjunction with any other articles/charts/comments appended to this issue.

UNID CW

Continuous Cyrillic Five Letter Groups

The appearance of continuous Cyrillic 5 – letter groups reported in our last newsletter 129, continue;

4913	2000z (IP)	03 Mar	Continuous Cyrillic Morse 5 –letter groups	(Via Twente SDR)	BR	WED
3753.5	0019z (IP)	08 Mar	Continuous Cyrillic Morse 5 –letter groups	Good	(Via Twente SDR)	BR

In addition to these continuous transmissions, a number of operational stations have been heard using Cyrillic Morse. These use four character call signs & send messages in either 5-figure or 5-letter groups following a formal header. Morse is hand sent & professional. The example below was logged on 12 March:

5HCD 5HCD 5HCD DE JGXV JGXV QTC AR 462 38 12 1248 462 = MMMM ZITCH HHUNAetc

Header appears to represent Msg. No. - Grp count - Date - Msg. origin time - Msg. No.

A Short UNID CW

3885	2010z	14 Apr	VVV VVV DE WS1 WS1 AR Repeated several times over period monitored Carrier keyed on & off for various lengths between calls, (tuning?). Nothing heard after 2015z	BR	THU
------	-------	--------	--	----	-----

Morse - Number Stations

M01/2 XIV MCW, hand (463 sched for Mar- Apr). Will change to M01/3 sched ID 025 for May - Aug.

Variant Formats

As the variant formats have not been used for some while, the last logs reported Sept – Nov 2021, the variant definition listings have now been shelved but will be reintroduced should they reappear. These variants were in use irregularly from late 2017 until the end of 2021, with the first definitions appearing in the January 2018 newsletter, EN104. Whether these formats were introduced to add variation to the training exercises or experimentally with a view to changing the format on a more permanent basis is unknown.

First noted in July 2021 is the occasional change to the ending where 0.0.0. is sent using periods or random 'series of 'dits' in place of the usual 000. Also of note is the tendency to omit the == pair at the end of the message on numerous occasions.

More recently is the appearance of a signal on 5020kHz consisting of several elements combining to effect a 'tonal' sound. This can make copy of the 2000z M01 transmission difficult or impossible depending on signal strength. Copy can often be achieved by off-tuning to the upper carrier of the M01 signal.

M01a (From Feb 2016 M01a has been redefined to cover all M01 variants - excepting M01b)

A number of regular schedules have been reported & Logged by Edd Smith – See ENIGMA 2000 Newsletter 116 for details.

Logs are shown as continuous. In practice there are often pauses between lines – Often quite lengthy pauses.

Morse Stations - Not Number Related

M42 IC

M42 is a designation originally assigned by the original ENIGMA group & covered a number of formats & modes. The group of stations was later identified as belonging to the Russian government / intelligence / diplomatic services & as such was deleted from the ENIGMA Control List as being outside of the numbers station remit. However, the station still attracts interest and is regularly still monitored & so will now be included in all forthcoming newsletters.

Mode is Morse or Baudot ITA2 50/500, (RTTY - FSK) 3rd Cyrillic alphabet with Op. chat in CW both before & after the main message transmission.

Due to space constraints these logs show only main detail of the exchanges logged.

Baudot (RTTY) content shown in **Bold** type.

No reports – M51b format in use

M51a (FAV22) Daily Mon - Fri, Sun & some Sats. See NL 72 for details

Shutdowns over Easter Period & Continuing Irregular Transmissions.

M51 was missing from their usual two frequencies over Easter with no output at all heard from the station. It returned to air for two days from Tuesday, 19 April with the usual continuous groups but was missing again on 21 & 22 April.

M51's transmissions have since been unpredictable & irregular, with the station appearing for a couple of days only to go quiet again for the following day or two, whereas previously the station was to be found almost continuously on the two core frequencies 24 hours a day. Some days the station has not appeared at all, or will transmit the scheduled Morse lessons before going off-air once again.

Whether the station is experiencing technical problems – on one transmission the station went off-air part-way through a Morse lesson, or whether there are other reasons behind these changes is unknown. We are at the beginning of a new financial year, so perhaps funding has been reduced - running those transmitters continuously must be a very expensive business. We will watch with interest to see any further developments.

More on M51b on 80 metres from PoSW

M51b on 3536kHz inside the 80 metre amateur band. Interested in the report of M51b on this frequency on 20-January; I was not aware of M51b active on this particular day but it had been noted earlier in the week:-

17-Jan-22, Monday: 0729 UTC 3536 kHz. Strong CW, groups of five characters, just like the Morse usually heard on 6825kHz and 3881kHz, nothing heard on these two frequencies but that would change later:-

0849 UTC 3536 kHz. Still going strong and also similar on 6825.
0922 UTC Gone from both frequencies when checked at 0922 UTC.

0929 UTC Starting up on 6825//3881 kHz with the usual slow "VVV DE FAV22...." routine, nothing on 3536kHz

M89 O

This is a summary of activity from the M89 stations.

Oddities

PoSW reports on a Mystery Tone

First noticed in early November of last year in the UK afternoon time on one of a number of frequencies between just below 15 MHz to just above 20 MHz, a fixed audio tone of 967 Hz as read on a frequency counter connected to the receiver low-level output and still on in the last days of April – except that the tone has changed in frequency, now reads as 1208 or 1209 Hz, which has been the case since early March, although this higher tone had been noted on a couple of days in February before returning to 967.

Always a strong signal and can usually be found some time after 1200 UTC but appears to take a break over the weekend - searches on several Saturday and Sunday afternoons have failed to find it. The modulation appears to be very wide and it is difficult to be sure the tuning-in is spot on but there is no mistaking it when found. It was a strong signal on Wednesday 27-April at 1235 UTC on 20250 kHz, give or take. Difficult to see what purpose a transmission like this serves.

Voice, Polytone, Tones and Hybrids

E06

Unusually, we start this section with Peter's analysis of this section compiled by RNGB from his and others reports:

Only one E06 schedule left at a reasonable time of day apparently; first + third Thursdays in the month with a repeat on the following day. That'll be a Friday, then.

En123 of March 2021 predicted 16230 + 19325 kHz with call "864" for the month of March of that year and that holds true for the present year:-

4-Mar-22, Friday:- 0600 UTC, 16230 kHz, tuned in a couple of minutes past the hour, calling "864", DK/GC "791 791 50 50, not too strong, ended 0612:40s UTC.

0700 UTC, 19325 kHz, second sending, stronger.

17-Mar-22:- 0700 UTC, 19325 kHz, DK/GC "317 317 52 52", strong signal, ended 0713 UTC, missed 0600z sending.

18-Mar-22, Friday:- 0600 UTC, 16220 kHz, ten lower than expected, S6 to S7.
0700 UTC, 19325 kHz, also S6 to S7.

Nothing readable on the predicted frequencies on the first Thursday in April, or on the Friday. Forgot to listen on the third Thursday, managed to catch the last transmission in this month.

22-Apr-22, Friday:- 0600 UTC, 17470 kHz, call "951", DK/GC "874 874 62 62", strong signal dipping into the noise on only a couple of occasions, ended before 0615 UTC.

Onto RNC-B's section:

E06 Mar/April log:

Monday		0210z	11454kHz	0310z	14456kHz

E07

PoSW leads in with his analysis of E07/E07a :

The E07a SSB number station may be no more but the related E07 continues to show up on the expected frequencies:-

Sunday + Wednesday Schedule, 1800 UTC Start in March, 1700 UTC in April:-

2-Mar-22, Wednesday:- 1800 UTC, 10321 kHz, very weak signal, difficult copy, sounded like the “no message” routine.
1820 UTC, 9121 kHz, much stronger, “318 318 318 000”.

6-Mar-22, Sunday:- 1800 UTC, 10321 kHz, very weak, unreadable.
1820 UTC, 9121 kHz, again much stronger, “318 318 318 000”.

9-Mar-22, Wednesday:- 1800 UTC, 10321 kHz, “318 318 318 1” for a full message, DK/GC “305 61” x 2, weak at first then became stronger.
1820 UTC, 9121 kHz, S5 to S6.
1840 UTC, 7821 kHz, very strong.

13-Mar-22, Sunday:- 1800 UTC, 10321 kHz, “318” and “305 61” again, S6 to S7.
1820 UTC, 9121 kHz, weaker.
1840 UTC, 7821 kHz, S7, interference from some kind of pulse signal.

16-Mar-22, Wednesday:- 1800 UTC, 10321 kHz, “318 318 318 000”, good signal.
1820 UTC, 9121 kHz, weaker.

20-Mar-22, Sunday:- 1800 UTC, 10321 kHz, weak signal and 1820 UTC, 9121 kHz, stronger,
“318 318 318 000”.

23-Mar-22, Wednesday:- 1800 UTC, 10321 kHz, very weak, unreadable.
1820 UTC, 9121 kHz, “318 318 318 1”, full message, DK/GC “5871 87” x 2, weak but readable.
1840 UTC, 7821 kHz, much stronger.

27-Mar-22, Sunday:- 1800 UTC, 10321 kHz, “318” and “5871 87” as on Wednesday. Unlike on Wednesday this was a strong signal.
1820 UTC, 9121 kHz, slightly weaker.
1840 UTC, 7821 kHz, back up to being a strong signal, peaking well over S9.
First day of British Summer Time today, this schedule shows up one hour later this evening, 7 pm but we confidently predicted a shift to 1700 UTC start in April to bring it back to a 6 pm start.

3-Apr-22, Sunday:- 1700 UTC, 13417 kHz, “417 417 417 000”, strong signal, very strong wide-shift FSK signal on the HF side, close enough to be a nuisance when using a receiver with a 2.5 kHz filter.
1720 UTC, 12117 kHz, strong.

6-Apr-22, Wednesday:- 1700 UTC, 13417 kHz, “417 417 417 1”, DK/GC “2129 96” x 2, strong signal, FSK signal still there but weak.
1720 UTC, 12117 kHz, strong signal.
1740 UTC, 10717 kHz, weak, local noise interference, difficult copy.

10-Apr-22, Sunday:- 1700 UTC, 13417 kHz, “417” and “2129 96” again, signal strength up and down, the FSK on close frequency very strong.
1720 UTC, 12117 kHz, very strong.
1740 UTC, 10717 kHz, weak.

13-Apr-22, Wednesday:- 1720 UTC, 12117 kHz, missed 1700z sending, “417 417 417 000”,
strong.

17-Apr-22, Sunday:- 1700 UTC, 13417 kHz, “417 417 417 000”, strong, FSK on close frequency also strong.
1720 UTC, 12117 kHz, very strong.

20-Apr-22, Wednesday:- 1700 UTC, 13417 kHz, “417 417 417 1”, DK/GC “2269 81” x 2, strong signal, no sign of the FSK/RTTY signal this evening.
1720 UTC, 12117 kHz, strong.
1740 UTC, 10717 kHz, very weak, down in the noise.

27-Apr-22, Wednesday:- 1700 UTC, 13417 kHz, “417 417 417 000”, good signal, the wide-shift FSK interference is back.
1720 UTC, 12117 kHz, very strong signal.

Saturday Schedule, 1400 UTC Start in March, 1300 UTC in April:-

5-Mar-22:- 1400 UTC, 12143 kHz, “114 114 114 000”, very strong signal, strong “XJT” on the HF side.
1420 UTC, 11143 kHz, strong.

12-Mar-22:- 1400 UTC, 12143 kHz, “114 114 114 000”, strong, the STANAG noise-maker still going strong.
1420 UTC, 11143 kHz, slightly weaker.

19-Mar-22:- 1420 UTC, 11143 kHz, missed first sending, “114 114 114 000”, strong signal.

2-Apr-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, strong signal.
1320 UTC, 11576 kHz, slightly weaker.

9-Apr-22:- 1300 UTC, 12176 kHz, full message, “152 152 152 1”, DK/GC “901 140” x 2,
longer than your usual E07 message although not as long as some in the past, ended approx 1316:25s UTC, strong signal, interference from a wide-band buzz/pulse signal extending from below 12170 to above 12190 kHz, someone's over-the-horizon radar presumably.
1320 UTC, 11576 kHz, good signal.
1340 UTC, 10276 kHz, weak, local interference in this part of the short-wave spectrum, difficult copy.

16-Apr-22:- 1300 UTC, 12176 kHz, “152” and “901 140” again, strong signal.
1320 UTC, 11576 kHz, very strong.
1340 UTC, 10276 kHz, weaker.

23-Apr-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, strong signal.
1320 UTC, 11576 kHz, also strong.

Sunday Schedule, 0700 UTC Start in March, 0600 UTC in April:-
6-Mar-22:- 0700 UTC, 10268 kHz, “201 201 201 000”, weak signal.
0720 UTC, 11068 kHz, also weak.

13-Mar-22:- 0700 UTC, 10268 kHz and 0720 UTC, 11068 kHz, both around S6 to S7, “201 201 201 000”.

3-Apr-22:- 0600 UTC, 9261 kHz, “224 224 224 000”, weak signal.
0620 UTC, 10261 kHz, very weak.

10-Apr-22:- 0600 UTC, 9621 kHz, expected to be a repeat of yesterday's full message based on past observations, weak signal, difficult copy, could just hear the “224 224 224 1” preamble.
0620 UTC, 10261 kHz, very weak, unreadable.
0640 UTC, 11461 kHz, strong signal, the only transmission of the three that was readable, DK/GC as expected “901 140”.

17-Apr-22:- The 0600 and 0620 UTC transmissions too weak to copy under local interference, third sending much better:-
0640 UTC, 11461 kHz, “224” and “901 140”, as expected, strong signal.

24-Apr-22:- 0600 UTC 9261 kHz and 0620 UTC 10261 kHz, both weak but readable, “224 224 224 000”.

One from the prediction list:-

Saturday Schedule, 1410 UTC Start:-

Also predicted to appear on Thursdays, missed so far.

9-Apr-22:- 1410 UTC, 16331 kHz, “893 893 893 000”, strong signal, SLT cluster on close frequency, “S” the strongest “D” strong but with a noticeable “chirp”.
1430 UTC, 15831 kHz, weaker.

16-Apr-22:- 1410 UTC, 16331 kHz, full message, “893 893 893 1”, DK/GC “1675 35” x 2, signal up and down with SLT cluster for company, ended 1415:30s UTC.

1430 UTC, 15831 kHz, good signal with QSB.

1450 UTC, 14831 kHz, weaker.

Unusually for E07 the three-figure call is not reflected in the kHz x 100 of the three frequencies.

23-Apr-22:- 1410 UTC, 16331 kHz and 1430 UTC, 15831 kHz, both good signals, “893 893 893 000”.

And on to others' logs, reflecting that found by Peter:

Sunday

And from PoSW:

A small selection of some stronger E11 transmissions heard in March and April, frequencies from the prediction list:-

4181 kHz:- 9-Mar-22, Wednesday 1910 UTC, "399/00". very strong signal.
 2-Apr-22, Saturday:- 1910 UTC, "394/00", very strong.
 13-Apr-22, Wednesday:- 1910 UTC, "391/34", full message, strong signal, "out" just after 1920 UTC.
 16-Apr-22, Saturday:- 1910 UTC, "391/34", as on the 13th.
 20-Apr-22, Wednesday:- 1910 UTC, "391/00".

5737 kHz:- 24-Mar-22, Thursday:- 2000 UTC, "522/00".
 31-Mar-22, Thursday:- 2000 UTC, "522/00", strong signal.
 3-Apr-22, Sunday:- 2000 UTC, "524/00", strong.
 7-Apr-22, Thursday:- 2000 UTC, "525/00".
 14-Apr-22, Thursday:- 2000 UTC, "520/35". "Out" at 2010:20s UTC.
 17-Apr-22, Sunday:- 2000 UTC, "520/35", as on the 14th.
 21-Apr-22, Thursday:- 2000 UTC, "525/00", strong

6923 kHz:- 9-Mar-22, Wednesday 1715 UTC, "977/36", strong signal.
 25-Mar-22, Friday:- 1715 UTC, "978/00". strong.
 30-Mar-22, Wednesday:- 1715 UTC, "970/00", strong.
 1-Apr-22, Friday:- 1715 UTC, "970/00", strong signal as always.
 6-Apr-22, Wednesday:- 1715 UTC, "977/36", not quite as strong as previously but strong enough, "Out" 1725:30s UTC.
 8-Apr-22, Friday:- 1715 UTC, "977 36" again.
 13-Apr-22, Wednesday:- 1715 UTC, "974/00", strong signal.
 15-Apr-22, Friday:- 1715 UTC, "970/00".
 20-Apr-22, Wednesday:- 1715 UTC, "976/00".
 22-Apr-22, Friday:- 1715 UTC, "970/00".
 27-Apr-22, Wednesday:- 1715 UTC, "974/00".

7317 kHz:- 28-Mar-22, Monday:- 1900 UTC, "640/34", full message format, "out" just after 1910 UTC.
 31-Mar-22, Thursday:- 1900 UTC, "640/34", same message as on the 28th.
 4-Apr-22, Monday:- 1900 UTC, 644/00".
 7-Apr-22, Thursday:- 1900 UTC, "648/00".
 21-Apr-22, Thursday:- 1900 UTC, "646/32", strong signal.

7864 kHz:- 7-Apr-22, Wednesday:- 1730 UTC, "414/00".
14-Apr-22, Wednesday:- 1730 UTC, "415/00".

8530 kHz:- 20-Mar-22, Sunday:- 1910 UTC, "616/00".

1-Apr-22, Friday:- 1910 UTC, "616/39", full message, good signal, "out" just after 1921 UTC.
3-Apr-22, Sunday:- 1910 UTC, "616/39", same as on the 1st.
15-Apr-22, Friday:- 1910 UTC, "613/00".
17-Apr-22, Friday:- 1910 UTC, "618/00".

12202 kHz:- 21-Mar-22, Monday:- 0845 UTC, "716/00", strong.

30-Mar-22, Wednesday:- 0845 UTC, "714/38", message ending with "out" at 0855:50s UTC.
4-Apr-22, Monday:- 0845 UTC, "710/00", weak signal.
25-Apr-22, Monday:- 0845 UTC, "715/39", strong, "out" after 0856.

13470 kHz:- 21-Mar-22, Monday:- 1745 UTC, "240/00", all E11 transmissions heard on this frequency suffer from interference from a rapidly swept carrier.

10-Apr-22, Sunday:- 1745 UTC, "247/33", severe interference from swept carrier, "out" 1755:50s UTC.
11-Apr-22, Monday:- 1745 UTC, "244/00" with interference.
17-Apr-22, Sunday:- 1745 UTC, "246/00", weak with the usual interference, difficult copy.

13908 kHz:- 15-Mar-22, Tuesday:- 0845 UTC, "157/00".

29-Mar-22, Tuesday:- 0845 UTC, "156/00".
5-Apr-22, Tuesday:- 0845 UTC, "152/20", message, weak signal, "out" at 0852:11s UTC.

14972 kHz:- 22-Mar-22, Tuesday:- 1430 UTC, "918/00".

5-Apr-22, Tuesday:- 1430 UTC, "911/00", weak signal.
9-Apr-22, Saturday:- 1430 UTC, "910/00".
12-Apr-22, Tuesday:- 1430 UTC, "912/39", weak, difficult copy.

24/04 '480' 153 44 61188 to 64164 153 44 00000				

From PoSW we receive:

First + Third Fridays in the Month Schedule:-

4-Mar-22:- 2100 UTC, 6775 kHz, "319 319 319 00000", strong signal, presumably the second sending, nothing found at 2000z.

18-Mar-22:- 2100 UTC, 6775 kHz, "319 319 319 00000", not as strong as on the 4th, still unable to find the first sending at 2000.

Moved back by one hour in April but because the clocks went forwards by an hour for summertime shows up at the same local time:-
1-Apr-22:- 1901 UTC, 9268 kHz, the elusive first sending found in progress, "319 319 319 00000", strong enough to be over-ride local RF noise interference.

2000 UTC, 6775 kHz, strong signal.

15-Apr-22:- 1900 UTC, 9268 kHz, "319 319 319 00000", weak signal.

2000 UTC, 6775 kHz, much stronger.

Sunday 0930 + 1000 UTC Schedule:-

13-Mar-22:- 0930 UTC, 12093 kHz, call "480", DK/GC "356 356 44 44", good signal, ended around 0942 UTC. This schedule from the prediction list in En129.

1000 UTC, 10212 kHz, predicted frequency for the second sending, something there, very weak, unreadable made worse by local noise interference, very fierce between 8.5 and 11 MHz.

20-Mar-22:- 0930 UTC, 12093 kHz, call "480", DK/GC "179 179 42 42", S6 to S7.

Nothing heard at 1000 UTC.

27-Mar-22:- 0930 UTC, 12093 kHz, British Summer Time started this morning, S06 stays on UTC so now shows up one hour later local time, 10.30 AM. Weak signal, difficult copy, "480" and DK/GC "652 652 43 43".

10-Apr-22:- 0930 UTC, 13945 kHz, "480", DK/GC "651 651 42 42", weak, nothing heard at 1000 UTC on predicted frequency of 11128.

24-Apr-22:- 0930 UTC, 13945 kHz, very weak, could just hear the "480" call. Nothing found at 1000 UTC.

17/04	NRH	DanAr writes, "First time in years , at least for me , there are no scheduled transmissions from V07."				

Followed by Original Token's, "This has happened before, but is very uncommon. On all 3 frequencies the transmitter did tune up before the scheduled transmit times. There was a very light carrier present, indicating the system was transmitting, but there was no audio present. For all three transmit periods the carrier disappeared at about 15 minutes, 10 seconds, after the scheduled start time.
 Either a technical problem, or an operator error, but based on the 15+ minute weak carrier on each frequency I suspect there should have been a message. If there had been no message, if it was a null, the third frequency would not have tuned up."

April 2022

Ary opens this log; my own condx bad with QRM enabling me only to hear 1130z sending and record the freq 2kHz higher than correct one.

13562 02-04-2022 1100 XPB1 not 100% sure of the freq, later confirmed.

12162 02-04-2022 1110 XPB1

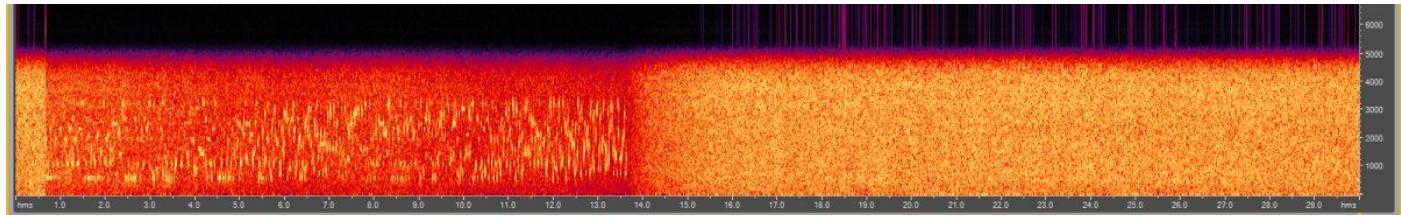

11562 02-04-2022 1120 XPB1

11162 02-04-2022 1130 XPB1

10562 02-04-2022 1140 XPB1

10262 02-04-2022 1150 XPB1

Tones, Hybrids and FSK

X06 Mazielka (1c) logs section

Unusually PLdn tuned across a X06 transmission on 16116kHz 1000 to 1010z 23/03 whilst checking his system which had been subject to the Blue Screen of Death due to program conflict and a loss of time synch between the programs. This sonogram was captured and tones measured:

134265

Gizza Job!

Looking for a new challenge?

We are the Secret Intelligence Service, also known as MI6. We work secretly around the world gathering intelligence to promote and protect the UK's interests and stay ahead of our adversaries. We have really rewarding careers that rely on people with diverse backgrounds, skills and perspectives. If you are interested in different cultures, enjoy working with others and building successful relationships, then we have a number of exciting flexible roles that may suit you.

We are looking for high potential candidates and offer a tailored training programme that will harness your skills and experience, enabling you to directly support the intelligence capability of the UK.

To work in SIS you must be a British citizen or hold dual British nationality and have been resident in the UK for at least 7 of the last 10 years.

To find out more, please send your curriculum vitae and covering letter to:

Recruitment Department, PO Box 78450, London SE1P 6PQ

Please do not disclose to anyone that you have contacted MI6. Doing so may mean that we cannot progress your application. Candidates will have to pass a vetting process.

Thanks 'E'

PoS's Items of Interest

Accidentally left out from the last issue [En129] I take pleasure in placing it here with apologies to Peter:

Denmark is not a country which frequently comes to mind when one thinks of espionage, so the following story from the Breitbart Europe site on 12-January is, perhaps, a little unusual:-

"Danish spy chief arrested on alleged treason charges over data leaks" is the headline and goes on to say, "The head of Denmark's Defense Intelligence Service (FE), Lars Findsen, the country's top spy, has been in police custody for over a month after allegations that several current and former employees had leaked sensitive data.

The spy chief is one of four current and former employees of the FE to have been arrested in connection with the alleged data leaks and has been in custody for over a month, but a publication ban on the case was not lifted by the Danish court until Monday.

The hearing took place behind closed doors.

A Danish Police Intelligence (PET) investigation led to the arrest of Findsen and three others on December 8th but the exact details of the leaks are unknown and the case has been shrouded in secrecy due to publication bans, broadcaster DR reports.

According to the Swedish broadcaster SVT, Findsen is facing possible charges of treason in relation to the case. Findsen is said to have allowed his name to become public and commented to reporters at the court hearing on Monday saying, 'I want the charges brought forward and I plead not guilty. This is completely insane.'

The case is believed to have stemmed from an August 2020 report from an independent supervisory body that criticised the FE and led to media scrutiny of the agency, specifically an article published in the newspaper *Berlingske* which alleged the FE had partnered with the American National Security Agency (NSA) to spy on Danish citizens and European leaders.

Last year it was revealed that Danish intelligence cooperated with the NSA under the administration of former President Barack Obama after allegedly granting the NSA access to Danish internet cables.

The surveillance is believed to have targeted several European leaders including former German Chancellor Angela Merkel and current German President Frank-Walter Steinmeier as he served in his former role as Minister of Foreign Affairs.

The PET is also believed to have investigated possible leaks involving Danish citizen Ahmed Samsam, who is subject to a terrorism case. *Berlingske* reported in January of 2020 that Samsam had allegedly been in the service of Danish intelligence while a member of the Islamic State terrorist group in Syria, citing anonymous sources at the time.

Wars and rumours of wars – although as of 24-February and with regard to Ukraine - no longer rumours - it's all happening, folks. The British Prime Minister has been sounding off as though the increasingly Disunited Kingdom was still a major power, what with his comments and threats directed towards Vladimir Putin and Russia's invasion of Ukraine, and Boris Johnson had been directing his venom towards Mr P before the event. Johnson ain't no Churchill, but you have to wonder if he has been studying Churchill's plan to attack the Soviet Union, as it then was, immediately after World war 2, given the code name Operation Unthinkable, some details of which are given in a slim volume entitled, "State Secrets - Behind the Scenes of the 20th Century", edited by one Chris Pomeroy and published by The National Archives of Kew, Richmond, Surrey.

The entry for Operation Unthinkable reads thus, "There is a dossier in the National Archives with the stark title, 'Russian Threat to Western Civilization'. The plan, later known as Operation Unthinkable, was drawn up by the Joint Planning Staff in May 1945. It speculated how force might be used to 'impose upon Russia the will of the United States and the British Empire' and set 1 July 1945 for the date for commencing hostilities.

Churchill was afraid that a swift withdrawal of US forces from Europe would leave Britain vulnerable to a Russian advance as well as result in the loss of Persian and Iraqi oilfields.

The paper believed that it would take 'total war' to inflict defeat on Russia in the field, where it had a three to one manpower advantage, Operation Unthinkable was never developed into a coherent plan. By 1946 it was clear that US troops would be based in Europe for a long time." Not that planning to attack Russia was confined to Churchill (Conservative Party) because 1945 General Election was won by the Labour Party led by Clement Attlee who was just as keen according to a book entitled "Deceiving the Deceivers", by S. J. Hamrick, a study of the espionage careers of Kim Philby, Donald Maclean and Guy Burgess, Prime Minister Attlee had something similar in mind. "Meeting on November 25, 1948...Herbert Morrison - a senior figure in the Attlee administration - predicted war with Russia by the summer of 1949".

Point to ponder:- "The bankers will ensure we stay in debt. The pharmaceutical companies will ensure we stay sick. The weapons manufacturers will ensure we keep going to war. The media will ensure we are prevented from knowing the truth. The Government will ensure all of this is done legally." - seen on the internet.

For NL130:

A comment on newsletter issue 129:- The item on Douglas Britten caught my eye; I had happened across his name recently whilst searching through the vast collection of radio and electronics related publications on the World Radio History website and in particular in an issue of the long defunct British periodical the Short Wave Magazine, the December 1968 edition, edited by one Austin Forsyth, which sounds like the name of a 1950's British saloon car - like Ford Prefect in The Hitch-hiker's Guide to the Galaxy .

brief item on page 616 under the headline, "Espionage - G3KFL" which says, "Readers will not expect us to have much to say about this dreary and disgraceful business, so fully reported in the daily press of November 5 – there has been enough heard about the failure of a weak character, a traitor to his Service, the methods of trapping used by the 'other side' and all the rest of it. It affected us to the extent that - because there was an Amateur Radio angle, with a 'ham'(sic) involved – we had numerous eager press enquiries and requests for 'background' (fortunately, as far as this individual was concerned we had none).

As far as was possible, we played it down, and it is probable that at least two 'follow-up stories' were stopped. It is to be hoped that, in the miserable circumstances surrounding the wretched G3KFL, the damage that may have been done to the image of Amateur Radio has been the least possible. While our man languishes in what may seem to be 'easy retirement' for the next 14 years or so, the probability is that his contact-man, hurriedly 'recalled for consultation' will be shot for his ineptitude."

Thanks indeed Peter!
