Editorial

IN KEEPING WITH OUR ANNOUNCEMENT IN THE LAST NEWSLETTER [En130] ENIGMA2000 WILL NOT DISCUSS THE RUSSIAN/UKRAINE MATTER BEYOND TECHNICAL MATTERS

WE WILL NOT BE ANSWERING E-mails SENT FROM THE PARTICIPATING COUNTRIES CONCERNING OUR SUBJECT MATTER

The Past two months have been somewhat difficult for yours truly with certain matters interfering with my intercept duties. The final tattering up of my property coming to an end as necessary since the storm. This has meant that whilst I still do the intercepts the preparation of the posts to group are perhaps a little slow. This can only get better and notwithstanding visitors shortly.

The conditions have been most variable; the A and K indices going up and down like the proverbial fiddlers' elbow. The effects on the frequencies used by most of the Number transmissions have reflected these changes as is noticeable from signal reports.

There's no return of the E07 1700z Sunday/Wednesday schedule it seems and E2k will stop reporting this schedule as NRH; searches have also been made and without much success.

E07 a schedules have all gone without any notice along with E17z schedule and of course the S06s series. E07 a and E17z will be discontinued from the voice section; if and when [?!] they return then we will again include.

We have been receiving many spoof emails which obviously we are ignoring; others have contacted us offering proper translations and such like and again we have ignored those because of the point of sending which we find suspicious. Look at the red straps above and you will understand why.

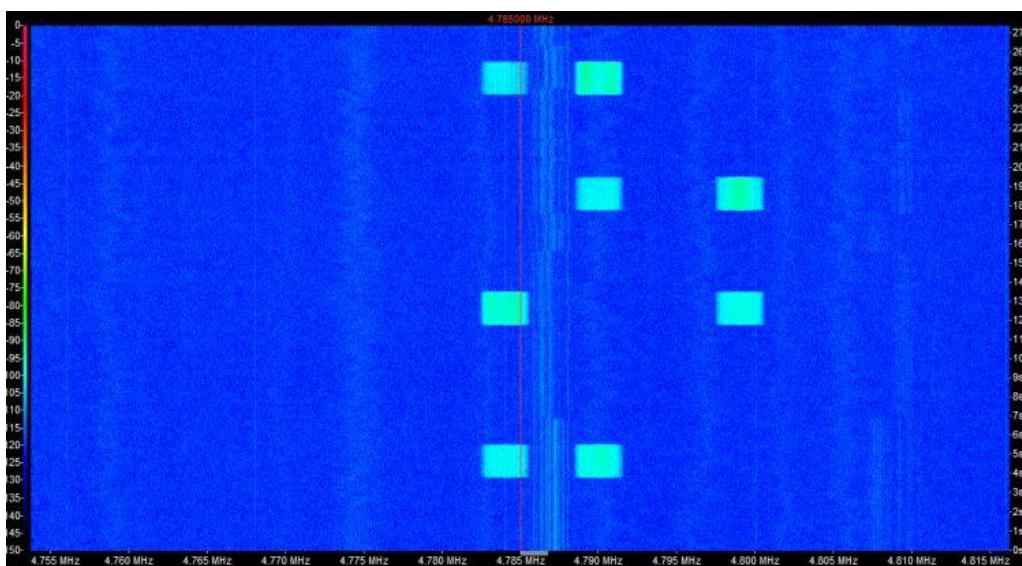

China is again in the news with some interesting snippets 'espionage' and exactly how much of it is fact or editorial licence from the west is, of course, unknown.

An E2k member and myself have met on two occasions to discuss matters UKR/RUS and we will, as stated above, stay shy of reporting this matter. There is more going on than the press at large can report and an appreciation of local news [which will not be reported here in translated form] seems heavily tainted with propaganda. Here's hoping for peace.

Request from 'E'

'E' writes, 'Around 4785kHz I have been hearing 3s bursts on a regular basis with 7 – 11s between at night. Can you hear this or is it just my local QRE?

This image is what E has heard on a narrower bandwidth that covered. Any ideas folks?

Sample of 4785kHz and that in Bandwidth
So, any ideas what this might be? My copy 14/06 at 1621z

Douglas Brittenagain!

We've been following the storyline of Douglas Britten for a few issues. There is a lot of information available with more made to us from those who knew him. We were recently contacted by a MaleAnon whose father served with DB. There was a short exchange between us in which I mentioned, in part, some of the information imparted in Prof Aldrich's book GCHQ.

"Certainly interested in his Cyprus activities; I'm sure you know he was instructed to target certain officers and OR's who had access that he didn't. I have also been informed he once tried, unsuccessfully, to create a wife swapping circuit for blackmail purposes too.
Be pleased to put what you write in a newsletter."

In return MaleAnon writes, "Dad describes the houses having slats rather than windows in Cyprus due to the heat. He told me there was not an awful lot of privacy and you could hear lots. Douglas and his wife would row a lot. Once mum and dad heard his wife say 'if you don't do <something unspecified>, I will tell them what you are up to'.

My oldest sister used to play (with their child/children - I assume) in the Brittan household. She recalls finding something under a chair and pulled it out. She told me that Douglas got nasty and shouted at her. She was never allowed back in the household.

Dad and his peers could never understand where Douglas got his money from. Dad said he had a brand new Volvo. Obviously airmen like my dad did not earn much money back then.

Dad described how colleagues of Douglas used to say ‘he is awfully nice - he lets us go home and he locks up the office for us’.

Dad said Douglas used to go to lots of parties. My late nan (who was a game old bird) and dad followed Douglas to one party and spied at him through the fence of the venue to see what he was up to! It would seem Douglas was viewed with extreme suspicion in Cyprus!

Mum (who was a civilian) and dad went to ‘the Seagents office’ to report their concerns about Douglas. Dad said the Seargent shouted mum and dad out of the office. Douglas then reported mum and dad for harassment.

Years later dad was in a canteen at another airbase (I think he was back in the UK) - a chap (I assume who knew dad) came up to him and said ‘you know Douglas, you were right’.

Everything was there in plain sight!

So, MaleAnon, many thanks for this interesting input, providing a personal input on DB.

With these additional thoughts mentioned by MaleAnon it is interesting that PoSW writes: Interested to see that you saw the item on G3KFL in the 1968 Short Wave Magazine; I noticed another short piece in the same volume with espionage connections - although nobody knew it at the time. On page 353 of the August '68 edition of SWM there is a very short piece on the appointment of a new Post Master General, in charge of radio licensing among other things, a certain Mr. John Stonehouse, of whom the editor says, “He is a keen and able young man and his appointment as PMG constitutes promotion for him in the Govt. set-up.”

This is the individual who was later uncovered as an agent for the Czech spying agency and, as it happens, was the subject of a Channel Four documentary shown in May called, “The Spy Who Died Twice”, a reference to the fact that he faked his own disappearance and was presumed dead due to drowning before showing up again. I had not realised this was being shown as I have just about given up on television other than the film channels and the likes of Yesterday, PBS America, Smithsonian and Quest where sometimes there is something worth watching and I have long ago stopped buying the listings magazines - but I happened to be taking a quick trawl around the channels and stumbled across it quite by chance just as it was starting. One quote from someone who knew Stonehouse during the heyday of his political career was something along the lines of, “We all knew he was a crook, but no-one ever thought he was a spy”. [Tnx PoSW]

John Stonehouse has a small mention by Josef Frolik in his book about his defection [The Frolik Defection]; indeed, it is thought that Stonehouse was responsible for Concordski and passed drawings and technical details of Concorde to his Czech handlers.

More interesting is that Josef Frolik named some Labour MPs who were known to him as spies. Any doubt, and I had none as I read his book, was taken away reading the Mitrokhin Archive. All there, Stonehouse and mates one of whom was known to be exceedingly greedy for his backhander for product.

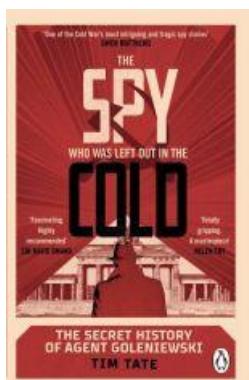

Russian Consulate in San Francisco – seems the burn bag is operational

A website worth a read [from a member]:

Those of you who have followed the Portland Spy Ring at any particular time will have come across the singular activity of the Polish Diplomat Michal Goleniewski. He was the bloke whilst working for the Russians and the British dobbed in a ‘Hooton’ from the Underwater Warfare depot in Dorset.

Well, it turns out that Agent Goleniewski has quite a lot of activity to own up to.

The story is more than interesting and Tim Tate leave apparently no stone unturned to write a very satisfying account of Goleniewski’s activities, spying and personal across Cold War Europe.

Where did he end up after such activities? This too is covered in much detail – perhaps too much detail – but a satisfying book indeed. Well worth the cost and an in depth read.

Available from Amazon [[The Spy who was left out in the Cold: The Secret History of Agent Goleniewski: Amazon.co.uk: Tate, Tim: 9781787634015: Books](#)] I noted Steven Dorrill’s review who states as a good read then strips his comment down. *My advice is don’t bother with Dorrill’s MI6 which I did not find a useful volume.*

NIA files chargesheet against two in espionage case

Abhinav DeshpandeHYDERABADAPRIL 22, 2022 20:42 IST

UPDATED: APRIL 22, 2022 20:42 IST

<https://www.thehindu.com/news/national/telangana/nia-files-chargesheet-against-two-in-espionage-case/article65345168.ece>

The accused includes a Pakistani

The Hyderabad unit of National Investigation Agency on Friday filed a chargesheet against two persons, including a Pakistan national, in an espionage case in Andhra Pradesh for their involvement in conspiracy and espionage activities with an intention to wage war against India.

The accused are Altafhussein Ganchibhai (27) alias Shakil from Godhra in Panchmahal district of Gujarat and Waseem from Karachi, Pakistan. While Altafhussein Ganchibhai was booked under Sections 18 of the Unlawful Activities (Prevention) Act and 120 B, 121A of the Indian Penal Code and 66C of Information Technology Act, Waseem was booked under Sections 17 and 18 of the Unlawful Activities (Prevention) Act and 120B, 121A of the Indian Penal Code.

The case was originally registered on January 10, 2020, by the Counter Intelligence Cell of Andhra Pradesh police, Vijayawada, and was reregistered by the NIA on December 23, 2021, pertaining to criminal conspiracy to carry out anti-national activities by Pakistani agents for obtaining crucial and sensitive information pertaining to Defense establishments from Indian Armed Forces personnel by engaging civilians as their agents using Social Media Platforms like Facebook, WhatsApp, Instagram etc.

The investigation by the NIA has revealed that Altafhussein Ganchibhai, on directions of Pakistan-based handlers had clandestinely activated WhatsApp by passing on OTPs received on Indian SIM numbers to his handlers in Pakistan for collection/transmission of sensitive information pertaining to Indian Defense forces and establishments.

“These SIM cards were subscribed in the name of Indian fishermen from Gujarat who were earlier arrested by Pakistan Maritime Security Agency in 2020 when they were fishing in the high seas,” the NIA officials said.

The agency established that these SIM cards were illegally routed back to India to the arrested accused Altafhussein Ganchibhai, who activated seven such SIM cards under the direction of his handlers in Pakistan. He was arrested on October 25, 2021. Waseem, who is currently at large, had routed money clandestinely through online Cryptocurrency exchange platforms to Indian agents for eliciting sensitive and classified information pertaining to vital Indians Defense establishments.

The NIA continues further investigation into the case.

US-Israeli cyber firm uncovers ‘massive’ Chinese-backed industrial espionage ring

Cyberson says group is ‘one of the most prolific and industrious’ in cyber threat landscape, targeted dozens of tech and manufacturing companies on 3 continents

By RICKY BEN-DAVID

9 May 2022, 6:05 pm

<https://www.timesofisrael.com/us-israeli-cyber-firm-uncovers-massive-chinese-backed-industrial-espionage-ring/?s=09>

An Israeli-American cybersecurity firm said Monday that it uncovered a “massive” hacking operation, apparently led by a hacking group believed to be backed by China, that had engaged in intellectual property (IP) theft and industrial espionage on three continents.

Cyberson, which is headquartered in Boston with offices in Tel Aviv, London, and Tokyo, said the group employed sophisticated methods and worked in an elusive manner to target technology and manufacturing companies in the US, Europe, and Asia and steal sensitive proprietary information.

Assaf Dahan, senior director and head of threat research at Cyberson, told The Times of Israel that the ring, known as the Winnti Group (and also tracked as APT41, Blackfly and Barium in cybersecurity circles) was “one of the most prolific and industrious groups in the cyber threat landscape,” and is known to operate on behalf of Chinese state interests.

The group has been active since at least 2010. Some known members of the group were indicted in 2020 by the US Department of Justice for computer crimes against some 100 companies in the US and other countries, including software development companies, computer hardware manufacturers, telecommunications providers, and gaming firms.

Dahan said Cyberson’s research showed that the Winnti Group engaged in “intellectual property theft and cyber espionage on a grand scale” since at least 2019, and possibly before. Cyberson began its research into the group’s industrial espionage operations last year, having been alerted by one of the targeted companies that something “funky” was afoot in its network, said Dahan, who is based in London.

He explained that Cyberson researchers were able to observe the group’s efforts to obtain sensitive data such as patent and product details, source codes, tech blueprints, and manufacturing instructions in real-time.

“Their level of stealth and sophistication was very high,” Dahan said, describing the group’s modus operandi in the context of this specific hacking operation as a “house of cards” made up of several components that were interconnected and interdependent.

“It’s an intricate and complex deployment process where the components all have to work together in a certain order. It’s very difficult to detect because each component [alone] doesn’t appear malicious. It’s a smart way of evading detection and it worked — they worked undetected for three years,” said Dahan.

During the analysis, Cyberson was able to uncover a previously undocumented “family of malware” including a new version of Winnti malware called WINNKIT, which Dahan described as a “very advanced cyber tool of Chinese origin, likely military intelligence.”

The malware allowed the hackers to conduct “reconnaissance and credential dumping [to pull multiple passwords and login information], enabling them to move laterally in the network,” according to Cyberson’s investigation, which the company dubbed Operation CuckooBees. The hack “allowed the attackers to steal highly sensitive information from critical servers and endpoints belonging to high-profile stakeholders.”

Assaf Dahan, senior director and head of threat research at Cyberson. (Courtesy)
Dahan said that the extent of the damage to the targeted companies was difficult to assess.

Cybereason said it had briefed the Federal Bureau of Investigation (FBI) and the Department of Justice on its research.

Western nations, and in particular the US and Britain, have over the years accused China of large-scale hacking operations aimed at pilfering vast amounts of data including trade secrets and scientific information as well as private details of citizens.

A Bloomberg report last year detailed how Chinese operatives were able to breach major companies by exploiting a major US tech supplier.

In 2018, US authorities indicted two alleged Chinese hackers said to have acted on behalf of Beijing's main intelligence agency to steal trade secrets and other information from government agencies and a who's who of major corporations in the United States and nearly a dozen other nations. Targeted nations named in the US indictment include Brazil, Canada, Finland, France, Germany, India, Japan, Sweden, Switzerland and the United Arab Emirates.

Last year, Cybereason revealed in a separate report that Chinese state-backed hacking groups compromised at least five global telecommunications companies, stealing phone records and location data.

Founded in 2012, Cybereason has raised over \$700 million in capital over the past decade with investors such as GV, previously known as Google Ventures and the venture capital arm of Alphabet, Softbank, CRV, Spark Capital, Lockheed Martin, and Liberty Strategic Capital, the private equity firm set up in early 2021 by former US Treasury secretary Steven Mnuchin.

Cybereason uses behavioral analytics and machine learning to process information in real-time and provide extended detection and response (XDR). The software can tell companies if they are under attack, assess the impact, and move to stop the threat, according to the company's website.

Cybereason is said to have confidentially filed for an initial public offering (IPO) in February that could value the company at more than \$5 billion.

'Chinese spy' Christine Lee targeting MPs is not a 'one-off case' security sources say as they warn of a growing threat of foreign state interference in British politics

MI5 issued rare security alert regarding Christine Lee in January earlier this year

Security service accused her of working on behalf of China's communist regime

Officials have now warned Mrs Lee's is not a 'one-off case' amid rising concern

MI5 boss says UK is in 'contest' with states trying to undermine national security

By JAMIE PHILLIPS FOR MAILONLINE

PUBLISHED: 20:38, 11 May 2022 | UPDATED: 20:38, 11 May 2022

<https://www.dailymail.co.uk/news/article-10806659/Chinese-spy-Christine-Lee-targeting-MPs-not-one-case-security-sources-say.html>

'Chinese spy' Christine Lee targeting MPs is not a 'one-off case', security sources have said, as they today warned of a growing threat of foreign state interference in British politics.

MI5 issued a rare security alert earlier this year, informing MPs that the prominent London-based solicitor had engaged in 'political interference activities' on behalf of China's ruling communist regime.

It came amid increasing concern over interfering foreign states presenting a huge danger to democratic institutions and values.

Ken McCallum, MI5 director general, has described the UK as being in a 'contest' with states attempting to undermine national security and interfere with democracy - as he welcomed plans to overhaul espionage laws.

He described the problem as an 'insidious' threat and a 'really significant challenge'.

And security sources have said Ms Lee's case is not a 'one-off', adding: 'We are seeing that manifesting elsewhere and we are prepared to see much more of that in the future.'

Whitehall officials believe powers put forward in the National Security Bill, which was introduced to Parliament today, can help tackle similar cases in future.

When MI5 first circulated the warning about Ms Lee in January earlier this year, it emerged that senior Labour MP Barry Gardiner had previously received more than £500,000 from her to pay for researchers in his office.

But at the time, he told the Commons he had been assured the alert did not relate to those donations.

Mr McCallum says it 'must be right' that Parliament looks at modernising powers available to MI5.

While espionage is as 'old as the hills, the way in which it comes at us is changing', Whitehall officials have said.

And discussing the rise in threats from hostile foreign states, officials added that the UK is 'regarded as one of a leading pack of unfriendly nations towards Russia, so we are expecting to see heightened activity'.

Particularly, grave concerns remain over the Russian regime being 'prepared to kill on UK soil'.

The warning sent by MI5 to MPs in January warning to avoid contact with Mrs Lee after she had engaged in 'political interference activities' on behalf of China's ruling communist regime

MPs were warned in a bombshell email in January to avoid contact with Mrs Lee, 58, who has been monitored by the security services for some time.

MI5 said Lee had 'facilitated' donations to British political parties and legislators 'on behalf of foreign nationals'.

In a dramatic intervention, MI5 accused the 58-year-old of working on behalf of China's powerful United Front Work Department agency to corrupt politicians.

Lee moved with her parents to Northern Ireland in 1974 before relocating to the West Midlands in 1985 and marrying her first husband in Birmingham when she was 21.

Some five years later she married Martin Wilkes in Solihull and the couple had two children. There is no suggestion of any wrongdoing on the part of Mr Wilkes

Will Russia's invasion of Ukraine usher in a new era of spying?

The Week Staff 7 hrs ago [11/05/2022]

|
<https://www.msn.com/en-gb/news/world/will-russia-s-invasion-of-ukraine-usher-in-a-new-era-of-spying/ar-AAX8RAQ?ocid=msedgdhp&pc=U531&cvid=dfd8650fac94461a8e5b0ceae0202d5e>

Moscow's global intelligence network has been devastated by the ongoing conflict, experts claim

Vladimir Putin has handed control of Russia's intelligence operations in Ukraine to the spying unit that orchestrated the attempted assassination of Sergei and Yulia Skripal in Salisbury, it has emerged.

The GRU, Moscow's foreign military intelligence agency, is taking over from the FSB, the country's principal security organisation, amid reports that the latter is being "blamed for failings" that contributed to Russia's "humiliating retreat from Kyiv", The Telegraph said.

Putin's invasion has prompted an "unprecedented wave of expulsions of Russian diplomats" from Europe, The Guardian's diplomatic editor Patrick Wintour said, a move that is not only "symbolic" but may "mark the end of an era" for overseas espionage.

Tinker, tailor, soldier, bye

The US and Europe have sought to "crack down on Russian spies" since Putin gave the green light for an invasion, Axios reported. This has led to the "expulsion of more than 400 Russian diplomats and embassy staff" as of early April.

Many of them were declared "persona non grata", meaning they were suspected of being "intelligence officers working under diplomatic cover". And their removal could "degrade Russia's ability to spy and carry out subversive activities on Western soil".

In what is thought to be an effort to reverse the damage, Moscow has "ordered tens of thousands of new diplomatic passports" as part of a "suspected scam to allow officials and spies – and their spouses – to bypass Western sanctions", the Daily Mail reported.

Citing a report by Russian opposition media outlet SOTA, the Mail said the foreign ministry has "suddenly demanded the rapid printing of almost 175,000 of the elite travel documents at a cost of £3.3million".

Boarding call

In what has developed into an "international game of spy vs. spy", The Washington Post said that the expulsions have "dealt Russia a potentially crippling blow".

The Kremlin and FSB depended on these operatives "to gather intelligence inside the countries where they serve", meaning the move "could dismantle large parts of Moscow's spy networks".

"The intelligence war with Russia is at full swing," Marc Polymeropoulos, a retired CIA officer who oversaw the agency's operations in Europe and Russia, told the paper. "This will prove to be a significant dent in Russian intelligence operations in Europe."

The individuals being expelled "will not be chosen at random", said The Guardian's Wintour. Instead, they will be handed a plane ticket home if "there is evidence they are in breach of the Vienna convention, the code that governs legitimate diplomacy".

Foreign ministries are "reluctant to expel" suspected spies "unless the evidence is overwhelming", he continued. This is because "diplomats naturally believe in their profession" and "regard experts in situ" as "vital to conveying accurate information about their host country back to their capital".

With that in mind, "few think" the wave of expulsions "can be reversed for decades to come", he added.

Close collaboration

While most experts consider the damage done to Russia's intelligence network to be immense, former US officials have warned that the Biden administration should "shut up" about their close collaboration with the government in Kyiv.

After senior officials told The New York Times that the US provided intelligence about Russian units that allowed Ukraine to target and kill Russian generals in the field, John Sipher, a former member of the CIA Clandestine Service, tweeted: "Shut up about it."

His warning that the briefings could further exacerbate tensions between the US and Russia was echoed by Professor Michael McFaul, a former US ambassador to Moscow, who added: "No one should be talking to [the] press about such things."

Collaboration between Western intelligence agencies and their allies in Ukraine has been extensive, GCHQ director Jeremy Fleming yesterday told a cyber security conference in Wales, explaining that the UK's spying agency is "seeing this conflict in near real time in information, cyber and technology spaces".

"It is a remarkable feature of this war just how much information about the behaviours and tactics of the Russian forces are out in the public domain – and how much intelligence has been released by Western allies to challenge and get ahead of Putin's actions.

"This is modern warfare influenced and shaped by the democratisation of information", the Independent reported.

'Gung-ho forces'

With his international web of spies being dismantled by the minute, Putin has turned to the GRU to "strengthen its spy capabilities", The Telegraph reported.

The "new man in charge of Putin's intelligence gathering" is Lieutenant General Vladimir Alekseyev, who has already been "implicated in attacks and assassination attempts against the West".

In an article for the Washington-based Centre for European Policy Analysis, investigative journalists Irina Borogan and Andrei Soldatov said: "He [Alekseyev] is accused by the UK and the European Union of overseeing the chemical weapons attack in Salisbury in 2018."

“An experienced special forces officer, he is also sanctioned by the US for direct cyber interference in the US 2016 election.”

Alekseyev also “saw military action in Syria, and he was involved in the conflict in Donbas”, they wrote. His fellow troops viewed him as “brutal and self-confident to the point of recklessness”.

Alekseyev’s appointment suggests that “it is the gung-ho forces within Russia’s spy community that are now charged with plucking victory from the morass of their country’s worst military and intelligence failure since World War II”, they added.

Russian GPS jamming in Ukraine pushes Britain to seek alternatives

Threat of satellite interference will only get worse, analysts warn

Larisa Brown, Defence Editor

Monday May 23 2022, 1.50pm, The Times

<https://www.thetimes.co.uk/article/russian-gps-jamming-in-ukraine-pushes-britain-to-seek-alternatives-9ck7b765h>

Britain and the United States are seeking alternatives to GPS that do not rely on satellites amid concern that future wars could be fought by signal jammers without a shot being fired.

Jeremy Quin, the defence procurement minister, said the government would “need to be alert” to the threat of satellite meddling as Russia uses the war in Ukraine to test its GPS jamming.

“There is a whole range of capabilities that are being deployed on both sides,” Quin told The Times. “We need to learn the lessons from that and continue our own innovative work in the field.”

Britain is reviewing alternative navigation systems including OneWeb, which uses space, and the American brand NextNav, which is in talks with government about deploying its ground-based technology in London and Manchester.

Where GPS uses radio signals from satellites to determine the location of receiver objects such as mobile phones, NextNav locates them using transmitter stations on the ground. It uses barometric pressure sensors on phones to determine altitude.

NextNav claims that its signals are 100,000 times stronger than those of GPS, making them harder to jam and more effective in cities, where building density gets in the way. It can geolocate positions within high-rise buildings to within three metres and also locate receivers in car parks.

Ganesh Pattabiraman, the chief executive of NextNav, said: “We are working with the US federal government to try and create a back-up system to GPS because of the threat that GPS is under from the Russians and others.”

He added: “If you want to jam our system it is very difficult to do so as we have multiple transmitters around the area. Our system is also secure as we have encryption turned on.” Pattabiraman met officials from the Cabinet Office and the Department for Business, Energy and Industrial Strategy this week.

Just before the war began Ukrainian diplomats in Brussels urged European leaders to use “all means” to jam Russian satellite signals.

Ukraine is understood to have asked the West to block Glonass, Russia’s GPS system, and jam its signal in the region. This requested was unfulfilled.

“The minute you disable Glonass, the Russians could shoot down the GPS satellites and you are into World War Three,” Pattabiraman said.

Such an attack could bring down an electrical grid, render cash machines inoperable, collapse the banking system, stop mobile phones from working, and prevent precision missiles from reaching their targets.

“There is no doubt whatsoever that the impact of the loss of GPS is almost existential. Banking, trade transactions and all areas of transport and food supply would all be affected and in complete chaos,” Pattabiraman added.

“The Russians could switch it off tomorrow and we’ve got no fall back at all”, said Lord West of Spithead, a former security minister and head of the navy who has raised his concerns in parliament.

In April, Lord True, a Cabinet Office minister, said Britain was “actively examining the critical dependencies we have on GPS to inform the measures needed to defend our critical national infrastructure”.

Russia has been accused of attacking GPS in Ukraine by methods including spoofing: using fake signals to trick the enemy about the location of a person, object or battalion.

Kaitlyn Johnson, deputy director and fellow of the Aerospace Security Project at the Center for Strategic and International Studies, said she believed GPS jamming and spoofing would be common in any future conflict. Some jamming technology can be bought for as little as £100.

Pattabiraman said that jamming or spoofing can become a “dangerous weapon” in the hands of a state actor or terrorist. “I can take out the electric grid, the telecommunications systems, everything by jamming GPS and I don’t have to fire a single shot. That’s the level of risk we are facing”, he said.

A spokesman for the Department of Business, Energy and Industrial Strategy, said: “We are working to boost the resilience of our positioning, navigation, and timing (PNT) capability for the UK to support our critical national infrastructure.

“We are currently reviewing a range of options, including non-space alternatives, to strengthen the UK’s security and will announce our next steps in due course.”

Deadly secret: Electronic warfare shapes Russia-Ukraine war

By OLEKSANDR STASHEVSKYI and FRANK BAJAK

<https://apnews.com/article/russia-ukraine-kyiv-technology-90d760f01105b9aaf1886427dbfba917?s=09>

KYIV, Ukraine (AP) — On Ukraine's battlefields, the simple act of powering up a cellphone can beckon a rain of deathly skyfall. Artillery radar and remote controls for unmanned aerial vehicles may also invite fiery shrapnel showers.

This is electronic warfare, a critical but largely invisible aspect of Russia's war against Ukraine. Military commanders largely shun discussing it, fearing they'll jeopardize operations by revealing secrets.

Electronic warfare technology targets communications, navigation and guidance systems to locate, blind and deceive the enemy and direct lethal blows. It is used against artillery, fighter jets, cruise missiles, drones and more. Militaries also use it to protect their forces.

It's an area where Russia was thought to have a clear advantage going into the war. Yet, for reasons not entirely clear, its much-touted electronic warfare prowess was barely seen in the war's early stages in the chaotic failure to seize the Ukrainian capital of Kyiv.

It has become far more of a factor in fierce fighting in eastern Ukraine, where shorter, easier-to-defend supply lines let Russia move electronic warfare gear closer to the battlefield.

"They are jamming everything their systems can reach," said an official of Aerorozvidka, a reconnaissance team of Ukrainian unmanned aerial vehicle tinkerers, who spoke on the condition of anonymity because of safety concerns. "We can't say they dominate, but they hinder us greatly."

A Ukrainian intelligence official called the Russian threat "pretty severe" when it comes to disrupting reconnaissance efforts and commanders' communications with troops. Russian jamming of GPS receivers on drones that Ukraine uses to locate the enemy and direct artillery fire is particularly intense "on the line of contact," he said.

Ukraine has scored some successes in countering Russia's electronic warfare efforts. It has captured important pieces of hardware — a significant intelligence coup — and destroyed at least two multi-vehicle mobile electronic warfare units.

Its own electronic warfare capability is hard to assess. Analysts say it has markedly improved since 2014, when Russia seized Crimea and instigated a separatist revolt in eastern Ukraine. But there are setbacks. Last week, Russia claimed it destroyed a Ukrainian electronic intelligence center in the southeastern town of Dniprovske. The claim could not be independently confirmed, and Ukrainian officials did not respond to a request for comment.

Ukraine has also made effective use of technology and intelligence from the United States and other NATO members. Such information helped Ukraine sink the battle cruiser Moskva. Allied satellites and surveillance aircraft help from nearby skies, as does billionaire Elon Musk's Starlink satellite communications network.

Electronic war has three basic elements: probe, attack and protect. First, intelligence is gathered by locating enemy electronic signals. On attack, "white noise" jamming disables and degrades enemy systems, including radio and cellphone communications, air defense and artillery radars. Then there is spoofing, which confuses and deceives. When it works, munitions miss their targets.

"Operating on a modern battlefield without data is really hard," said retired Col. Laurie Buckhout, a former U.S. Army electronic warfare chief. Jamming "can blind and deafen an aircraft very quickly and very dangerously, especially if you lose GPS and radar and you're a jet flying at 600 miles an hour."

All of which explains the secrecy around electronic warfare.

"It is an incredibly classified field because it is highly dependent on evolving, bleeding-edge technologies where gains can be copied and erased very quickly," said James Stidham, a communications security expert who has consulted for the U.S. State and Homeland Security departments.

Ukraine learned hard lessons about electronic warfare in 2014 and 2015, when Russia overwhelmed its forces with it. The Russians knocked drones out of the sky and disabled warheads, penetrated cellphone networks for psychological ops and zeroed in on Ukrainian armor.

One Ukrainian officer told Christian Brose, an aide to the late U.S. Sen. John McCain, R-Ariz., how Russian info warriors tricked a commander into returning a wireless call from his mother. When he did, they geolocated him in mid-call and killed him with precision rockets, Brose wrote in the book "The Kill Chain."

The U.S. also experienced Russia's electronic warfare in action in Syria, where the adversaries have backed opposing sides in the civil war. In 2018, U.S. Special Operations chief Gen. Raymond Thomas described how U.S. pilots' communications were regularly "knocked down" in Syria in the "most aggressive" electronic warfare environment on the planet. Russia's advanced systems are designed to blind U.S. Airborne Warning and Control Systems, or AWACS, aircraft — the eyes and ears of battlefield commanders — as well as cruise missiles and spy satellites.

In the current war, electronic warfare has become a furious theater of contention.

Aerorozvidka has modified camera-equipped drones to pinpoint enemy positions and drop mortars and grenades. Hacking is also used to poison or disable enemy electronics and collect intelligence.

Ukrainian officials say their electronic warfare capabilities have improved radically since 2015. They include the use of encrypted U.S. and Turkish communications gear for a tactical edge. Ukraine has advanced so much it exports some of its technology.

Russia has engaged in GPS jamming in areas from Finland to the Black Sea, said Lt. Col. Tyson Wetzel, an Air Force fellow at the Atlantic Council. One regional Finnish carrier, TransaviaBaltica, had to cancel flights on one route for a week as a result. Russian jamming has also disrupted Ukrainian television broadcasting, said Frank Backes, an executive with California-based Kratos Defense, which has satellite ground stations in the region.

Yet in the war's early days, Russia's use of electronic warfare was less effective and extensive than anticipated. That may have contributed to its failure to destroy enough radar and anti-aircraft units to gain air superiority.

Russia's defense ministry did not respond to a request for comment for this article.

Some analysts believe Russian commanders held back units fearing the units would be captured. At least two were seized. One was a Krasukha-4, which a U.S. Army database says is designed to jam satellite signals as well as surveillance radar and radar-guided weapons from more than 100 miles (160 kilometers) away. The other: the more advanced Borisoglebsk-2, which can jam drone guidance systems and radio-controlled land mines.

Russia may have also limited the use of electronic warfare early in the conflict because of concerns that ill-trained or poorly motivated technicians might not operate it properly.

"What we're learning now is that the Russians eventually turned it off because it was interfering with their own communications so much," said retired Lt. Gen. Ben Hodges, a former U.S. Army commander for Europe.

The communications problems were evident with many Russian troops talking on insecure open radio channels, easily monitored by outsiders.

It's unclear how much of an edge Russia's electronic assets may now offer. Ukraine's forces are now more concentrated than early in the war, which could make them easier to target.

Much depends on whether Russia's battalion tactical groups "are configured in reality as they are on paper," said James Rands, of the Jane's military intelligence think tank. Each group, comprised of roughly 1,000 troops, is supposed to have an electronic warfare unit. The Pentagon says 110 such groups are in Ukraine.

The Kremlin also claims to have more than 1,000 small, versatile Orlan-10 unmanned aerial vehicles it uses for reconnaissance, targeting, jamming and cellphone interception.

Russia has lost about 50 of its Orlan-10s in the war, but "whatever they lost could be a small portion of what's flying," said researcher Samuel Bendett, of the Center for Naval Analyses think tank.

Ukraine's relative UAV strength is unclear, but Ukrainians have adapted such technologies as software-defined radio and 3D printing to stay nimble.

The U.S. and Britain also supply jamming gear, but how much it helps is unclear. Neither country has offered details. The ability of both sides to disable the other's drones is crucial with the artillery they scout now so decisive in battles.

Musk's Starlink is a proven asset. Its more than 2,200 low-orbiting satellites provide broadband internet to more than 150,000 Ukrainian ground stations. Severing those connections is a challenge for Russia. It is far more difficult to jam low-earth orbiting satellites than geostationary ones.

Musk has won plaudits from the Pentagon for at least temporarily defeating Russian jamming of Ukrainian satellite uplinks with a quick software fix. But he has warned Ukrainians to keep those terminals powered down when possible — they are vulnerable to geolocation — and recently worried on Twitter about redoubled Russian interference efforts.

"I'm sure that the Russians are getting smarter about that now," said Wetzel, the Air Force lieutenant colonel.

Bajak reported from Boston. AP correspondent Lolita C. Baldor contributed from Washington.

See it, say it, pocket £12,000: China offers cash for reports on 'enemies'

Didi Tang, Beijing

Wednesday June 08 2022, 3.45pm, The Times
China

<https://www.thetimes.co.uk/article/see-it-say-it-pocket-12-000-china-offers-cash-for-reports-on-enemies-73h06qrmd>

China has announced that it will offer up to £12,000 and "spiritual" rewards for anyone who informs on people they suspect of being enemies of the state.

Under a law "standardising" its incentives, the government said it hoped to "encourage citizens to report acts harming state security" and "mobilise all social resources to maintain national security".

The Ministry of State Security said that the plan was "conducive to fully mobilising the enthusiasm of the general public to support and assist in national security work, widely rallying the hearts, morale, wisdom and strength of the people".

Rewards for tip-offs start at 10,000 yuan (£1,200) and may rise to ten times that amount based on the usefulness of the information. Informants, who are encouraged to report under their real names, can also be awarded "spiritually" with certificates acknowledging their service to the state.

The rules apply to tips involving people at home and overseas, as Beijing has become particularly wary in recent years of hostile foreign forces seeking to subvert party rule.

President Xi has made national security a "bottom-line" issue. In 2015, two years after he took office, he signed a new national security law with sweeping clauses covering political security, homeland security, military security, cultural security and technological security. Educational videos were released to tell children and teenagers to look out for suspicious activities, including by their parents, and instruct them on how to dial a hotline.

Cash rewards also have been offered to incentivise informants, although different local governments have had different rules. Last year, the city of Beijing handed out more than 250,000 yuan (£30,000) to about 70 citizens who came forward with useful information on suspected terrorism and violence.

A local official in the southwest city of Bije was rewarded "spiritually" and "materially" last year by both the national state security ministry and the provincial state security bureau after they reported on an American journalist in the city to report on its poverty reduction campaign.

The journalist was described as "continuously sneaking into the city", "reporting illegally on the negative side" of the campaign, and "hyping it overseas".

"Such clues have provided strong support for the state security apparatus to investigate cases and eliminate safety hazards in a timely manner," the Bije government said.

In the southern city of Guangzhou, a resident identified as Mr Fu was given money after he reported a driver for spreading information about a cult. Fu had recorded the conversation and passed it, along with the driver's details, to the provincial state security bureau.

Two villagers near the southern city of Shanwei, which is close to a military base, were given cash rewards for reporting a pair of visitors who were photographing the local bulletin board. A report in the People's Daily, the Chinese Communist Party's mouthpiece, said they might have been seeking clues to possible drills.

Satellites open the door to era of British espionage from space

Larisa Brown, Defence Editor

Monday June 13 2022, 12.01am, The Times

<https://www.thetimes.co.uk/article/satellites-open-the-door-to-era-of-british-espionage-from-space-dmr6v186z>

Two miniature satellites due to be launched from Cornwall this summer will carry out surveillance across different regions for years, paving the way for Britain to have its own spying capability from space.

High-quality imagery of the battlefields in Ukraine has highlighted the importance of satellites in providing an accurate picture amid widespread disinformation, Doug Liddle, head of In-Space Missions, said.

Britain has relied on its relationship with the US Department of Defense, which has shared its data, and the imagery from RAF aircraft in the region to analyse Russian troop movements.

However, the UK wants to develop its own sovereign capability by creating a constellation of small intelligence, surveillance and reconnaissance (ISR) satellites that will enable it to gather imagery and electronic intelligence.

One of their functions will be the monitoring of radio signals — a capability that has proved crucial to intercepting conversations between Russian commanders and junior ranks.

Advertisement

The Times was given rare access to the In-Space Missions laboratory in Hampshire, where miniature "CubeSat" satellites are being built in readiness for the launch. The satellites are prototypes and will carry out an initial scoping exercise to see what is possible for the UK in the future.

They are made up of electronics boards, along with bespoke payloads including cameras, at the request of Ministry of Defence scientists. The semiconductors inside them have come from China because of a global shortage.

Weighing 9kg each, the two "cereal box-sized" satellites will operate in low orbit, about 340 miles above the Earth. They will send information to one another while up to 60 miles apart and travelling at 17,000mph.

They will be launched at an estimated cost of \$300,000 from Virgin Orbit's Launcher One rocket, which takes off horizontally from a modified Boeing 747 jet named Cosmic Girl.

Unlike normal satellites, each "CubeSat" can have several customers, giving the product its novelty value.

The satellites have a dual use, so in theory they could be listening to a radio frequency signal for one government department while supporting the armed forces by telling them "what somebody is up to on their handheld VHF radio", Liddle said.

In the future, In-Space Missions, part of BAE Systems, wants one satellite to be able to process the data that is being collected by the other satellite so the company does not have to waste time sending raw data to Earth.

The launch will mark the first time satellites have been sent up from the UK. Many countries used to rely on Russia's launch platforms to send small satellites into space; however, companies have been unable to get the necessary export licence since Russia invaded Ukraine.

Antennas above the Russian Embassy in Bulgaria, a repeat by request

Morse Stations

All frequencies listed in kHz. Freqs are generally $\pm 1\text{kHz}$

This is a representative sample of the logs received, giving an indication of station behaviour and the range of times/freqs heard. These need to be read in conjunction with any other articles/charts/comments appended to this issue.

Morse - Number Stations

M01/3 XIV MCW, hand (025 sched for May - Aug). Will change to M01/2 sched ID 463 for Sept - Oct.

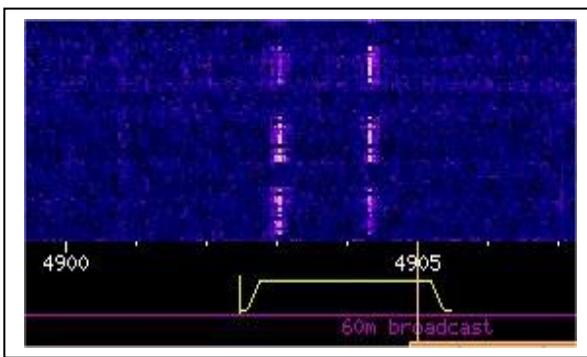

First noted in July 2021 is the occasional change to the ending where 0.0.0. is sent using periods or random 'series of 'dits' in place of the usual 000. Also of note is the tendency to omit the = = pair at the end of the message on numerous occasions.

Change of Freq for 2000z schedule:

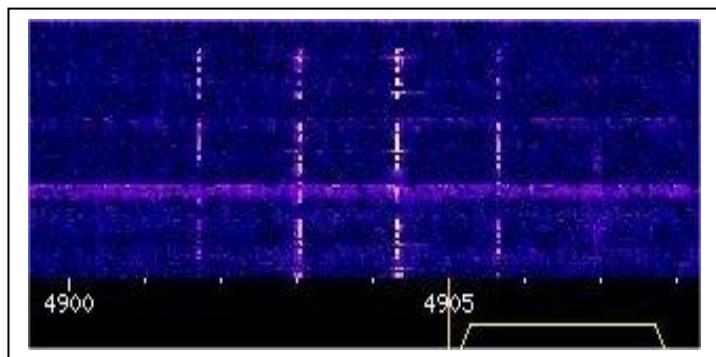

From the beginning of this '025' cycle, M01 has appeared on 4903kHz for the 2000z transmissions, 2kHz down from the usual frequency. The reason for this change is unclear since 4905kHz appears to be clear of any QRM or carriers.

Transmitter Output Variations

M01 has a nickname of 'Two-Tone', which was given to the station as originally it consisted of two carriers, spaced 1kHz apart. More recently, the spacing between the two carriers changed to 1.2kHz & in addition has been exhibiting four carriers on some transmissions – particularly the 2000z schedule. Whether this is an intentional change or the result of a malfunctioning transmitter is unknown. In the past, the transmitters were notoriously unreliable and the quality of the emissions often far from perfect. On one occasion, 12 May, only one carrier was used for the 2000z transmission. M01 never fails to surprise the regular listener!

M01 - Thu 05 May 2000z

M01 - Tuesday 17 May 2000z

Courtesy BR

May 2022:

4903	2000z	03 May	'025' 803 30 == 10945 ... 23010 ==	Good, fast. Many triplets in grps. 13 grps starting with 20	BR/HFD	TUE

M23 O ICW

Peter, (PoSW), found M23 in progress on Sunday, 12 June, following it up with further transmissions on Monday 13 June. Here is his report;

Return of M23 on 5435 kHz:-

The strange Morse station which turns up every once in a while on 5345 kHz sending a slow three-figure or letter group over and over for several minutes - or for a longer period of time - showed up again in June. The last time I heard it was towards the end of February of this year, if it had been active in between time then I missed it but it was certainly in business in the second week of June although it was only heard for a few days - but perhaps it had been there unnoticed for some time beforehand.

12-June-22, Sunday:- 1502 UTC, 5345 kHz Slow CW in progress sending 3 x 5 dash “000”, not too strong, certainly not as strong as when heard in the winter. Stopped 1506:45s UTC approx.

Not the end of it:-

1529 UTC, in progress again with “000”, stopped after 1536:40s UTC.

Left a receiver tuned to 5345 kHz but nothing further heard for the rest of the afternoon and early evening.

It transpired that three separate short transmissions were in existence:-

13-June-22, Monday:- 1428 UTC Just after, “000”, stopped at 1436:40s UTC.

1458:14s UTC, “000”, stopped 1506:40s UTC.

1528:12s UTC, “000”, stopped 1536:39s UTC.

These three transmissions heard at similar start and stop times, or a bit earlier, on Tuesday the 14th and Wednesday the 15th; but that was the end of it, did not show up on Thursday the 16th or following days.

Thanks for the report, Peter. Here are the logs in tabulated form;

Morse Stations - Not Number Related

M42 IC

M42 is a designation originally assigned by the original ENIGMA group & covered a number of formats & modes. The group of stations was later identified as belonging to the Russian government / intelligence / diplomatic services & as such was deleted from the ENIGMA Control List as being outside of the numbers station remit. However, the station still attracts interest and is regularly still monitored & will be featured in all forthcoming newsletters.

Mode is Morse or Baudot ITA2 50/500, (RTTY - FSK) 3rd Cyrillic alphabet with Op. chat in CW both before & after the main message transmission.

May 2022:

No reports

June 2022:

11561	1130z	08 Jun	CW/FSK 50/500Hz shift	AB	WED
-------	-------	--------	-----------------------	----	-----

Probably a weekly schedule. Ary, (AB) copied it also on 01 June, also at 1130z, but didn't find it during the rest of the week. The other half of the link was also not found.

Operator chat in FSK CW, messages in FSK 100bd/500Hz shift. As previously monitored it always sends two messages, one 5-figures groups message and one 5-letters groups message. It is still using this format.

M51a (FAV22) Daily Mon - Fri, Sun & some Sats. See NL 72 for details

Irregular Transmissions Continue

In our last newsletter we reported on the uncharacteristic absence of M51 over the Easter period & the station's irregular appearances on resuming transmissions.

This was far from normal activity for the station whose presence on their two core frequencies had been a regular daily feature for decades & in recent years, their output of apparently endless groups could be heard around the clock.

In May, the station was noted with a continuous output on only eight days, & with a partial output on a similar number of days, (usually appearing for the scheduled lesson format with continuous groups either before or after the lessons), with the station being off-air for the remaining days.

The appearance of the station, with either a continuous or partial output doesn't appear to conform to any pattern or schedule, the only rough observation being that approximately one-third of the month is respectively taken up with continuous output, partial output or no activity at all.

Peter, (PoSW), also noted the changes in the M51 transmissions. Here is his report & comments;

This French Morse station sending groups of five characters on 6825 and 3881 kHz continues, 6825 usually a strong signal – but not always in recent weeks, casually tuning to that frequency at times when activity might be expected to be in progress has produced a “nothing heard” observation but it might just be down to propagation. The 40 metre amateur band a bit higher up often shows wide variations in propagation from day to day.

Some unusual activity noted on one occasion:-

12-May-22, Thursday:- 1720 UTC. 6825 kHz, CW in progress, not the usual groups of five sent automatically, but hand-keyed using call-sign F9TM. Nothing on usual parallel 3881 but was on 3536 in the 80 metre band. Sending “CQF DE F9TM....RESEAU NATIONAL FRANCAIS”, a bit later appeared to be exchanging reports with French amateur stations on 3536, weak, also being relayed in parallel on 6825, much stronger. My attention divided between this and the PBS America TV channel which at this time was showing an espionage-themed programme, “Secrets, Lies and Atomic Spies”.

At 1836 UTC fast groups of five on 6825//3536, much as usually heard from M51b, still on in this mode at 1940 UTC, gone from both frequencies when checked just after 2000z. This variant using the F9TM call-sign on 3536 has been logged before, on 17-Sept-20 and 28-Feb-19 just to give two examples, also Thursdays; presumably there is an emergency communications organisation in France involving radio amateurs something like RAYNET in this country but more integrated with the military which holds on-the-air exercises from time to time. Somewhat strange to be using Morse for such a purpose in this day and age when in an emergency messages could be passed more rapidly using SSB or digital modes.

Voice, Polytone, Tones, Hybrids and FSK

It seems over the last two months we have seen less voice logs posted; holidays and other reasons doubtless. The loss of some E07 regulars and the entire E07 a schedules surely contribute to this, as does the loss of E17z and S06s. With the amount of null messages showing in the remaining E07 schedule across two months it seems the writing may well be on the wall for those stations also.

In the 1953 film ‘The Cruel Sea’ the Captain played by Jack Hawkins was confronted by his No1 whilst the ship was in port. The Number One was drunk and confirmed as such to the Captain when challenged. Hawkins uttered and repeated a memorable “It’s the war, Number One, the whole bloody war.” That was 69 years ago but states a reason for the loss of some excellent schedules today.

E06

From Peter, PoSW we read:

First + Third Thursdays in the Month 0500 + 0600 UTC Schedule:-

5-May-22:- 0500 UTC, 14565 kHz, just missed the start, tuned in approx 0505z. In progress, reasonable signal, ended around 0514z with, “792 792 58 58 00000”.

0600 UTC, 16125 kHz, second sending, call “460”, strong signal. Same frequencies as in May of last year courtesy of prediction list in newsletter 124. Repeated on the following day:-

6-May-22, Friday:- 0500 UTC, 14565 kHz, weak at first, stronger after a few minutes.
0600 UTC, 16125 kHz, a couple of S-points weaker than 24 hours earlier.

19-May-22:- 0500 UTC, 14565 kHz, “406” and DK/GC “237 237 51 51”, weak signal.
0600 UTC, 16125 kHz, stronger, ended just before 0613 UTC.

20-May-22, Friday:- 0500 UTC, 14565 kHz, first sending of the repeat, stronger than 24 hours earlier.
0600 UTC, 16125 kHz, started off weak, became stronger by 0605z.

3-June-22, Friday:- Forgot to listen on Thursday the 2nd, frequencies on Friday as per the prediction list:-
0500 UTC, 13985 kHz, call “328”, DK/GC “619 619 54 54”, not too strong.
0600 UTC, 15830 kHz, much stronger, peaking over S9.

16-June-22:- 0500 UTC, 13985 kHz, very weak, could just make out the “328” call.
0600 UTC, 15830 kHz, much stronger, DK/GC “709 709 51 51”, ended just before 0613 UTC.

17-June-22, Friday:- both the 0500z and 0600z repeats very weak, unreadable.

Logs compiled by RNCB say much the same as Peter:

E06 May/June log:

E07

Sunday + Wednesday Schedule, 1700 UTC Start:-

1-May-22, Sunday:- 1700 UTC, 13934 kHz, “919 919 919 000”, weak but clear enough.
1720 UTC, 12134 kHz, much stronger, well over the “9” on the S-meter.

4-May-22, Wednesday:- 1700 UTC, 13934 kHz, “919 919 919 1”, full message routine, DK/GC “507 49” x 2, weak.
1720 UTC, 12134 kHz, very strong signal.
1740 UTC, 10934 kHz, very weak, made worse by local interference.

8-May-22, Sunday:- 1700 UTC, 13934 kHz, “919” and “507 49” again, good signal, much stronger than usual for this frequency.
1720 UTC, 12134 kHz, not quite as strong as usual.
1740 UTC, 10934 kHz, weak signal and local QRM, unreadable.

11-May-22, Wednesday:- nothing heard at either 1700 UTC, 13934 kHz or at 1720 UTC, 12134 kHz.

18-May-22, Wednesday:- again, nothing heard at both 1700z and 1720 UTC.

Nothing further heard from this schedule during the rest of the month of May and nothing heard on the predicted frequencies for June. It looks as if this one has gone.

Saturday Schedule, 1300 UTC Start:-

7-May-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, S7 with deep fading.
1320 UTC, 11576 kHz, S5 to S6.

14-May-22:- 1300 UTC, 12176 kHz and 1320 UTC, 11576 kHz, “152 152 152 000”.

21-May-22:- 1300 UTC, 12176 kHz, weaker signal than usual, “152 152 152 000”.
1320 UTC, 11576 kHz, somewhat stronger than usual.

28-May-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, strong at first, rapidly became weaker.
1320 UTC, 11576 kHz, unlike the first sending started off weak and became somewhat stronger.

4-June-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, strong signal.
1320 UTC, 11576 kHz, weaker.

11-June-22:- 1300 UTC, 12176 kHz, strong and 1320 UTC, 11576 kHz, weaker, “152 152 152 000”.

18-June-22:- 1300 UTC, 12176 kHz, “152 152 152 000”, strong signal.
1320 UTC, 11576 kHz, weaker.

25-June-22:- 1320 UTC, 11576 kHz, missed the 1300z sending, “152 152 152 000”.

Sunday Schedule, 0600 UTC Start:-

1-May-22:- 0600 UTC, 10317 kHz, very weak, unreadable, second sending better.
0620 UTC, 11117 kHz, “312 312 312 000”, weak but readable.

8-May-22:- 0600 UTC, 10317 kHz, “312 312 312 000”, weak.
0620 UTC, 11117 kHz, also weak.

15-May-22:- Nothing readable at either 0600 or 0620 UTC.

29-May-22:- Nothing readable at 0600 UTC, second sending much better:-
0620 UTC, 11117 kHz, “312 312 312 000”, strong enough to over-ride local RF noise interference.

5-June-22:- 0600 UTC, 10317 kHz and 0620 UTC, 11117 kHz, same frequencies as in May but much stronger signals on both this morning, “312 321 312 000”.

19-June-22:- 0600 UTC, 10317 kHz and 0620 UTC, 11117 kHz, both very weak, just able to hear the “000” of the “no message” routine.

Saturday + Thursday Schedule, 1410 UTC Start:-

12-May-22, Thursday:- 1410 UTC, 15836 kHz, “157 157 157 1” for a full message, DK/GC
“3696 65” x 2, good signal.
1430 UTC, 14536 kHz, very weak, only became just audible around 1433 UTC.
1450 UTC, 13536 kHz, weak, interference from rapidly swept carrier.

14-May-22, Saturday:- 1410 UTC, 15836 kHz, “157” and “3696 65” again, good signal.
1430 UTC, 14536 kHz, weak but clear.
1450 UTC, 13536 kHz, stronger with weak swept carrier interference.

26-May-22, Thursday:- 1410 UTC, 15836 kHz, “157 157 157 1”, message, DK/GC “214 77” x 2, signal strength up and down.
1430 UTC, 14536 kHz, weak.
1450 UTC, 13536 kHz, very weak, unreadable, swept carrier interference.

28-May-22, Saturday:- 1410 UTC, 15836 kHz, “157” and “214 77” again, S5 to S6, became weaker.
1430 UTC, 14536 kHz, S5 with deep fading.
1450 UTC, 13536 kHz, weak but clear, the sweeper much weaker than usual.

4-June-22, Saturday:- Missed 1410 UTC sending on predicted frequency 13417 kHz.
1430 UTC, 14717 kHz, "603 603 603 000".

9-June-22, Thursday:- 1410 UTC, 13417 kHz, "603 603 603 1", DK/GC "1195 84", very strong FSK/RTTY signal close enough to be a nuisance.
1430 UTC, 14717 kHz, S4 to S5.
1450 UTC, 15817 kHz, strong.

11-June-22, Saturday:- 1410 UTC, 13417 kHz, "603" and "1195 94" again with FSK interference.
1430 UTC, 14717 kHz, signal strength up and down.
1450 UTC, 15817 kHz, strong.

16-June-22, Thursday:- 1410 UTC, 13417 kHz, very weak, unreadable under FSK interference.
1430 UTC, 14717 kHz, much better, "603 603 603 000".

18-June-22, Saturday:- 1410 UTC, 13417 kHz, with the usual interference and 1430 UTC, 14717 kHz, good signal, "603 603 603 000".

25-June-22, Saturday:- 1410 UTC, 13417 kHz, "603 603 603 1" for a message, DK/GC "2675 35" x 2, competing well with the RTTY interference.
1430 UTC, 14717 kHz, signal strength up and down.
1450 UTC, 15817 kHz, strongest of the three transmissions.

PoSW also logged the E11 transmissions:

Some of the E11 transmissions heard over the past two months, from PoSW, mostly of the “no message” variety, a three-figure group followed by “oblique zero zero” which lasts for just over three minutes ending with, “out”.

4783 kHz:- There is some kind of noise-maker on this frequency, fires up for about three seconds or so several times a minute, very strong.
7-May-22, Sat:- 1910 UTC, “392/36”, message, “Out” just before 1920:30s UTC.

11-May-22, Wed:- 1910 UTC, “394/00”, strong, the interference even stronger.

14-May-22, Sat:- 1910 UTC, “395/00”.

18-May-22, Wed:- 1910 UTC, “393/00”.

25-May-22, Wed:- 1910 UTC, “396/00”.

28-May-22, Sat:- 1910 UTC, “399/00”.

4-June-22, Sat:- 1910 UTC, “399/00”.

8-June-22, Wed:- 1910 UTC, “391/00”.

5409 kHz:- 1-May-22, Sun:- 2000 UTC, "520/00", strong signal.
 5-May-22, Thur:- 2000 UTC, "522/33", very strong, "Out" at 2009:53s UTC.
 8-May-22, Sun:- 2000 UTC, "522/33", as on the 5th.
 12-May-22, Thur:- 2000 UTC, "524/00", strong.
 15-May-22, Sun:- 2000 UTC, "524/00".
 19-May-22, Thurs:- 2000 UTC, "521/00".
 22-May-22, Sun:- 2000 UTC, "522/00".
 26-May-22, Thu:- 2000 UTC, "522/00".
 29-May-22, Sun:- 2000 UTC, "524/00".
 2-June-22, Thu:- 2000 UTC, "522/31", message, strong, "Out" at 2009:25s UTC.

7600 kHz:- There is a broadcast station on this frequency, always much weaker than E11.
 2-May-22, Mon:- 1900 UTC, "643/31", good signal, "Out" at 1909:30s.
 5-May-22, Thur:- 1900 UTC, "643/31", as on Monday.
 12-May-22, Thur:- 1900 UTC, "640/00".
 16-May-22, Mon:- 1900 UTC, "648/00".
 26-May-22, Thur:- 1900 UTC, "644/00".
 30-May-22, Mon:- 1900 UTC, "649/00".
 2-June-22, Thur:- 1900 UTC, "647/00".
 6-June-22, Mon:- "644/36", message, somewhat weaker than usual.
 13-June-22, Mon:- "643/00".
 20-June-22, Mon:- "648/00".
 23-June-22, Thur:- "647/00".

7863 kHz:- 6-May-22, Fri:- 1715 UTC, "978/00".
 11-May-22, Wed:- 1715 UTC, "974/00".
 13-May-22, Fri:- 1715 UTC, "976/00".
 25-May-22, Wed:- 1715 UTC, "974/00".
 3-June-22, Fri:- 1715 UTC, "974/00".
 8-June-22, Wed:- 1715 UTC, "972/31", message.
 10-June-22, Fri:- 1715 UTC, "972/31", again.
 15-June-22, Wed:- 1715 UTC, "972/00".

8088 kHz:- 5-May-22, Thur:- 1730 UTC, "414/32", "Out" at 1739:45s UTC.
 12-May-22, Thur:- 1730 UTC, "413/00".
 2-June-22, Thur:- 1730 UTC, "416/00".

9610 kHz:- 20-May-22, Fri:- 1910 UTC, "618/00".
 22-May-22, Sun:- 1910 UTC, "616/00", weak signal.
 27-May-22, Fri:- 1910 UTC, "618/00".
 29-May-22, Sun:- 1910 UTC, "618/00".
 12-June-22, Sun:- 1910 UTC, "618/00".

12229 kHz:- 6-May-22, Fri:- 1815 UTC, "925/00", strong signal.
 8-May-22, Sun:- 1815 UTC, "926/00".
 20-May-22, Fri:- 1815 UTC "922/33", message, "Out" before 1825 UTC.
 27-May-22, Fri:- 1815 UTC, "924/00".
 3-June-22, Fri:- 1815 UTC, "925/33", message, "Out" 1824:45s approx.
 5-June-22, Sun:- 1815 UTC, "925/33" again, strong signal.
 10-June-22, Fri:- 1815 UTC, "929/00".

12984 kHz:- 28-May-22, Sat:- 1430 UTC, "912/00".
 4-June-22, Sat:- 1430 UTC, "917/00".
 11-June-22, Sat:- 1430 UTC, "912/00".
 18-June-22, Sat:- 1430 UTC, "918/33", message, weak signal.

15720 kHz:- 18-May-22, Wed:- 0745 UTC, "347/40", message, longer than most, "Out" just after 0756 UTC.
 27-May-22, Fri:- 0745 UTC, "340/00".
 8-June-22, Wed:- 0745 UTC, "340/00".
 22-June-22, Wed:- 0745 UTC, "347/38", message, "Out" at approx 0755:45s.

17378 kHz:- 10-May-22, Tue:- 0820 UTC, "132/00", weak signal.
 18-May-22, Wed:- 0820 UTC, "132/00", weak.
 25-May-22, Wed:- 0820 UTC, "130/00", weak.
 7-June-22, Tue:- 0820 UTC, "136/00".
 8-June-22, Wed:- 0820 UTC, "132/00".
 14-June-22, Tue:- 0820 UTC, "133/40", message, "Out" after 0831z.
 21-June-22, Tue:- 0820 UTC, "131/00".

Fridays (1st & 3rd)		1900z	9912khz	2000z	7916kHz
03/06	'319' 00000				

From PoSW, Logs and associated analysis:

First + Third Fridays in the Month Schedule:-

6-May-22:- unable to find a transmission at 1900 UTC, second sending found easily:-
 2001 UTC, 7916 kHz, found in progress with, "319 319 319 00000". Frequencies in May of last year were 9465 and 7561 kHz so the first sending is probably in the 9 MHz band.

20-May-22:- 1906 UTC, 9912 kHz, first sending found in progress in "full message" mode, something of a rare event, the last appears to have hit the airwaves on 19-Nov-21, making the usual proviso that not all transmissions have been monitored. Weak signal, difficult copy.
 Tuned away to check the 1910z E11 on 9610, returned to S06 just before 1914z in time to hear the "00000" ending.
 2000 UTC, 7916 kHz, call "319", DK/GC "608 608 47 47", good signal.

Full message on a Friday means a repeat on Saturday:-

21-May-22, Saturday:- 1900 UTC, 9912 kHz, slightly stronger than 24 hours earlier.
2000 UTC, 7916 kHz, strong.

Moved forwards by one hour in June:-
3-June-22:- 2000 UTC, 9912 kHz, “319 319 319 00000”, weak signal.
2100 UTC, 7916 kHz, much stronger.

17-June-22:- 2000 UTC, 9912 kHz, “319 319 319 00000”, weak but clear.
2100 UTC, 7916 kHz, strong.

Saturday 1300 + 1330 UTC Schedule, Call “480”, Repeated on the Following Day, 0930 + 1000 UTC:-

14-May-22, Saturday:- 1300 UTC, 13547 kHz DK/GC “925 925 43 43”, reasonable signal, ended 1312 UTC.
Nothing readable at 1330 UTC on predicted frequency 11128 kHz..

15-May-22, Sunday, 0930 UTC, 14735 kHz, weak, difficult copy. Nothing heard at 1000 UTC on predicted frequency 12207.

21-May-22, Saturday:- 1300 UTC, 13547 kHz, DK/GC “673 673 41 41”, weak signal.
Nothing heard at 1330 UTC.

22-May-22, Sunday:- 0930 UTC, 14735 kHz, weak, clear signal.
1000 UTC, 12207 kHz, very weak, just about able to confirm S06 OM.

28-May-22, Saturday:- 1300 UTC, 13547 kHz, DK/GC “591 591 42 42”, around S6 with fading.
1330 UTC, 11128 kHz, just about detectable.

29-May-22, Sunday:- 0930 UTC, 14735 kHz, weak signal.
1000 UTC, 12207 kHz, second sending much stronger, which is most unusual!
Nothing shown in the prediction list for June and nothing found.

- 1) Sporadic on/off
- 2) Interference from rapidly swept carrier
- 3) Carrier out at 0830
- 4) Carrier out at 0854
- 5) Same scale twice and out of phase briefly
- 6) Not sure about freq
- 7) Break at 1117 UTC

Many thanks to all contributors as usual. Till the next issue I say: Good-bye and stay healthy!

Jochen Schäfer, Numbers-, X06 Database and Teamkopf – since June 29th aged 50!

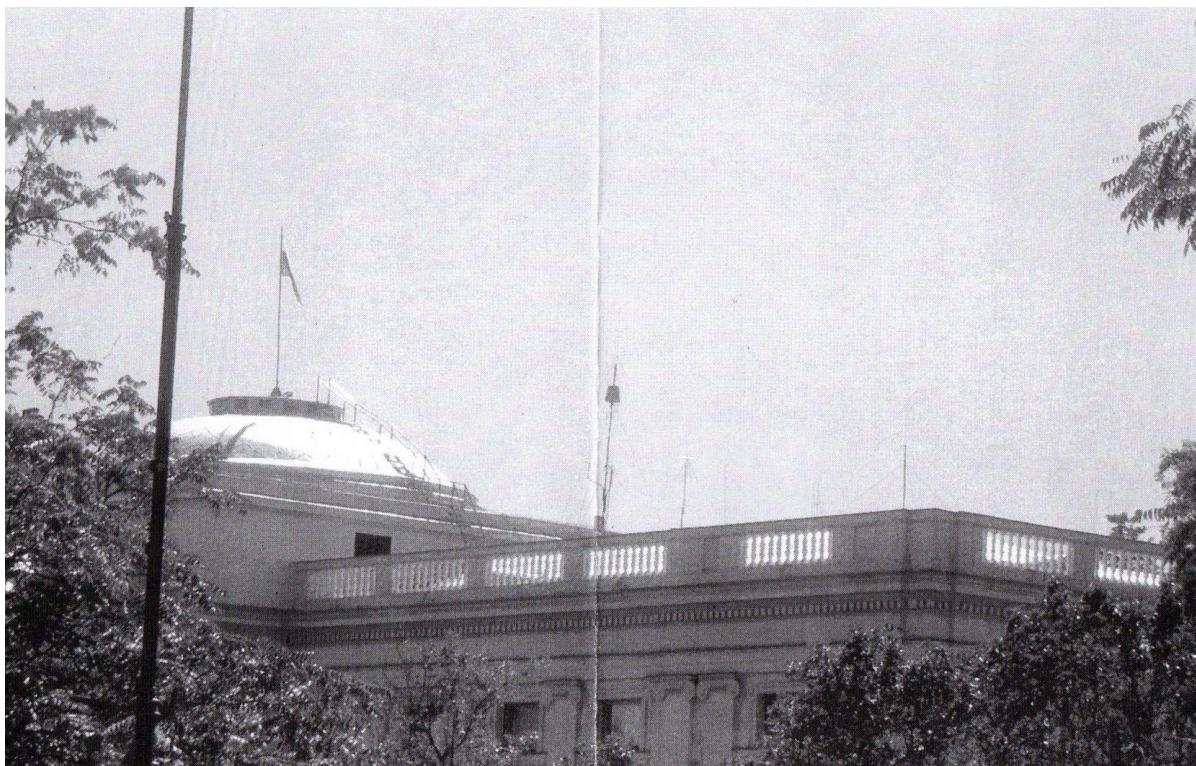

Here's an image sent in by 'E' [thanks] of antennas snapped above Russian Embassy in Warsaw with another later.....

GIZZA JOB!

Well, no job ads at the moment to post. I noticed that I was left out of the Queen's Jubilee Honours List [*including the Platinum Medal I would have been entitled to if this had occurred 22 or so years ago*].

It is interesting to note, and with none of the above levity, 'E' informs me that two of GCHQ's deputy directors, both part timers with young children were honoured – and that's along with the COVID scientist Dr Kerrie Thackray, all by the flexible working foundation 'Timewise.'

Makes a change from blokes who can ride a bike fast being Knighted for singular victories or those who apparently either composed 'music' I suppose.

Another image from the personal files of 'E' [not snapped by him, I might add] and given that from Google Earth his source did so much better!

SPECIAL MATTERS

Thanks to all our contributors:

Ary, Edd, BR, CC, Danix, DanAr, E, HH, HJH, JkC, Jochen, KW, Malc, MaleAnon, PoSW, PLdn, RC, RS, RNGB, tiNG

Apologies to anyone missed.

MESSAGES:

E: Thanks 'E', splendid stuff. Please thank your source. We're not putting in anything other than tech stuff concerning RUS/UKR.
4785kHz heard, no idea of its purpose. All's well here tnx
