Editorial

A Happy New Year to our readers. Members will doubtless be pleased the subs for this group have been paid so we exist for another year.

Those who bother to visit group will have noticed I have been ‘off-watch’ on occasion. Personal matters take precedence over ENIGMA2000 matters and I have had the unfortunate incidence of two funerals [two splendid persons, man and wife, who have marked my life with their skills – in context of E2k fast Morse].

Then there’s been the other matters of family visits as well as a short break ‘up North.’ My ‘off watch’ periods will be seen to continue into and past Christmas and the break from radio will be welcome; as I write this it seems travel to my daughter’s house will be difficult thanks to the train companies being affected by those Unions who lead us to believe train drivers and other staff need a pay rise [personally, I suspect most of these strikes, save perhaps Royal Mail are political and designed to damage the Conservative government as voted in by the electorate. Mind you, they haven’t helped themselves with the in-fighting and having more PM’s than the tramp outside a certain London underground station has had underpants].

On return I was shocked to see the changes of frequencies of certain XPA2 and XPB1 stations making the prediction charts seen at the end of this newsletter, or as seen on Priyom’s excellent site somewhat redundant until a full update is available.

Why are these changes occurring? Easy to blame the RUS/UKR conflict out of hand but there is also the matter of propagation; daily surprises with solar weather and extrapolated figures tell a different story for frequency change.

When ‘E’ kindly sent his logs in he included a little note, a usual thing. He noted something I had seen at Vauxhall Cross when I was enroute to the Oval Cricket Ground. The antennas atop the MI6 building have all gone; I wondered why and suspected use of the internet and a reliance on radio sources elsewhere [Cheltenham sprang to mind and there may well be others too].

Those of you who follow such things will be aware of Euston Tower, once home to MI5 watchers with 16th floor heavily curtained off to stop invasive activities. On the roof were many antennas. Like those on VX, these have also been removed as ‘E’ writes, “.....I notice all the aerials have disappeared from the roof of Euston Tower and dishes gone from the BT Tower.

The BT Tower, or Post Office Tower of the 60’s was host to massive parabolic antennas, part of the MoD ‘Backbone’ system to carry messages via microwave. Obviously the internet now does that faster and more reliably via fibre which serves point to point and mostly underground. If antennas are required then there’s always the MoD or other official buildings around London to supply the space; for instance, Wellington Barracks or those situated on Kensington Gore, where horses can be seen looking over the first floor balcony into the street. [*Thanks for this E, certainly food for thought*].

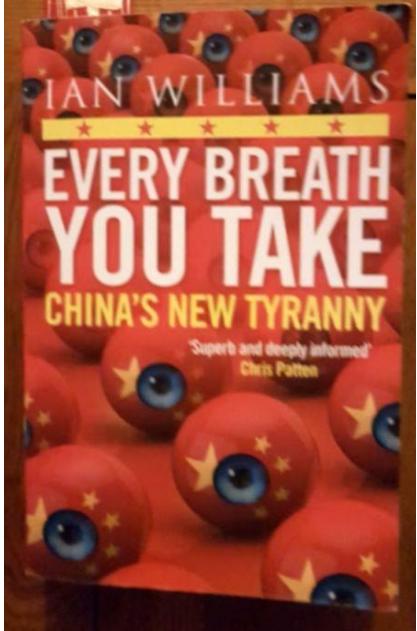

Here’s a decent read as you freeze at home: The secret lives of MI6’s top female spies. For the first time ever, SIS officers reveal why women often make the best spies for our times

Well worth a read! Whilst I have your attention take a butcher's at this: <https://virmuze.com/m/crypto-museum/x/vietnam-war/>

Book Review

Every Breath You Take - China's new tyranny by Ian Williams £16.99

Ian Williams is an award winning journalist and has a grip on China's technological state; perhaps the blurb sums this interesting study in a better way than I ever could. The book is an in depth read, difficult in some parts but paints a rather frightening image of technology in the service on man and beyond Orwell's 1984.

'China is building the world's first digital totalitarian state, a system of hitherto unimaginable control which threatens to make the world of Nineteen Eighty-Four a terrifying reality. Internet freedom has been eliminated and ubiquitous surveillance cameras make use of the latest facial recognition technology. Through flagrant cyber espionage, China has plundered Western technology on a massive scale, bullied foreign tech companies and academics, and intimidated critics. In doing so, it has become a model for aspiring dictators everywhere.'

Award winning journalist Ian Williams examines the extraordinary rise of the Chinese surveillance state, and supporting interviews and first-hand accounts highlight the ruthless efficiency with which the government can now act. There are implications too for the rest of the world: how to deal with an increasingly strident, aggressive Beijing is one of the biggest and most urgent challenges facing the West in what has become a technological Cold War.'

Chris Patten, Governor of Hong Kong 1992-1997 has also written some praise of this book [*I might add that as an ex-pat I long for the days when for official duties, especially Trooping the Colour, the Governor would appear, with his bodyguard, splendidly clad in his No1 uniform with coatee, uniform trousers and cock feathered black "silk" bicorne hat with silver braid and silver button*].

Mr Patten writes, "Ian Williams has written a superb and deeply informed study. It is a chilling reminder to all who believe in the rule of law and an open society of China's present threats to our way of life."

It's a very decent read; deep in places but forever informing. Recommended read.

News Round

Inside Manchester's top secret spy headquarters above a Greggs and Chinese restaurant The M.E.N. was among the first media to be given a glimpse inside GCHQ's Manchester's station

By Damon Wilkinson Reporter

19:20, 14 NOV 2022 UPDATED 22:19, 14 NOV 2022

<https://www.manchestereveningnews.co.uk/news/greater-manchester-news/inside-manchesters-top-secret-spy-25511143>

Through a glass door next to a Chinese restaurant, in an anonymous 1970s office block above a barbers and a Greggs, lies Manchester's most secretive building.

Heron House is home to signals intelligence agency GCHQ. Inside hundreds of spies carry out the clandestine business of keeping tabs on those who might wish to do the UK harm.

And the Manchester Evening News was among the first media to be given a glimpse inside.

GCHQ's move to Manchester at the back of end of 2019 ushered in a new era for spy chiefs. It signalled a change towards more openness and increased collaboration with universities and private industry as the intelligence community acknowledged the need to stay at the cutting edge of a new age of digital espionage.

Heron House is home to signals intelligence agency GCHQ (Image: Vincent Cole - Manchester Evening News)

The central location, on Albert Square opposite the scaffold-clad town hall, is symbolic of this shift in culture. The part of the building we're permitted to see has the same security rating as most government buildings.

Security checks are still required to get in, but with its open plan design, glass walled meeting rooms, understated grey sofas and plywood panelling it could double up as a trendy Northern Quarter coffee shop. The space means the agency can host things like school visits, meetings and even yoga classes.

But some old habits die hard. While a quick Google search will give you GCHQ's Manchester address, there's no signs outside advertising their presence.

GCHQ's Manchester office includes a space designed to encourage more public engagement (Image: Vincent Cole - Manchester Evening News)
Inside Heron House the windows and walls have enhanced security measures for protection against a number of potential threats.

And while part of the building may be fairly open and accessible, two other floors are classified 'top secret'. There spies - the actual figure is not disclosed, but we're told they number in the hundreds - work on the same intelligence missions as their colleagues at GCHQ's doughnut-shaped headquarters in Cheltenham.

These include defending the UK against potential cyber-attacks from China and Russia and digital surveillance of terrorists and organised crime. So why has the agency chosen Manchester as its base to, partly, come out from the shadows?

"The pace of technological change at the moment is so fast that the old ways of doing it just aren't going to cut it anymore," said Liz, GCHQ's deputy director for Manchester, who declines to give her surname for security reasons.

GCHQ's headquarters in Cheltenham (Image: Manchester Evening News.)

"When the organisation was thinking about where next and some of the challenges we face, Manchester seemed like a really good bet because you've got really strong universities, lots of tech start-ups and some of the really big tech firms.

"In Manchester we have been given a bit of licence to experiment. We are able to work here with industry in a way that you just can't elsewhere.

"And the opportunity of being here just opens us up. We're right in the city centre. This way we can be a little bit more friendly and invite people in."

Liz wouldn't be drawn on the exact nature of the work being done in Manchester, other than to say staff were 'working on all the missions' including 'hostile states, terrorism and serious and organised crime'.

But in a rare public address last month Sir Jeremy Fleming, the head of the agency, gave an insight into the agency's current priorities, when he spoke about the major risk posed by Chinese technology to the UK's security and prosperity and told how Ukraine's 'courageous action on the battlefield and in cyberspace' was turning the tide in the war against Russia.

GCHQ already has branches in Scarborough, Bude in Cornwall and London. But its Manchester station gives it more opportunities to recruit from outside its traditional white, male, upper and middle-class demographic.

Lots of Cheltenham-based staff initially made the move to Manchester, but they're being steadily joined by new starters from across the north. And as part of that move schools in areas of 'untapped talent' in all 10 boroughs in Greater Manchester have been invited in to spread awareness of the agency among communities that might not have even heard of it.

"There's a bit of mystique around what we do, but this gives us a chance to demystify some of it," said Liz. "We can't really expect people to trust us and want to come and work here unless we give them a bit more."

On Monday 60 kids from St Margaret's primary school in Whalley Range paid a visit for a lesson in code breaking. It was part of the launch of the agency's new book Puzzles for Spies, which includes hundreds of puzzles based on languages, engineering, codebreaking, analysis, maths, coding and cyber security skills.

For the launch GCHQ has teamed up with children's mental health charity Place2Be. The charity's chief exec Catherine Roche said: "Problem-solving encourages creativity, ingenuity, and imagination - which are all vital skills for growing and thriving into adulthood. Helping children to solve problems for themselves encourages them to develop resilience in the face of adversity, and helps them to become more confident, independent and successful in their own right."

World War Two: Plaque unveiled for codebreaker John Herivel

<https://www.bbc.co.uk/news/uk-northern-ireland-63594671>

A blue plaque to honour a World War Two codebreaker has been unveiled at Methodist College Belfast.

John Herivel, a former pupil at the school, played a key role in efforts to decrypt Germany's Enigma codes.

The work at Bletchley Park helped to decipher key intelligence messages to inform the Allies' war planning.

The unveiling of the plaque took place as Armistice Day commemorations were held across Northern Ireland, including at the Cenotaph in Belfast.

Veterans, dignitaries and members of the public observed a two-minute silence at 11:00 GMT.

Mr Herivel's system for breaking the ciphers in 1940 became known as the Herivel Tip or Herivelismus.

The work at Bletchley Park was kept secret for decades but an official history of British intelligence in the war would later state it had shortened the conflict by between two and four years and without it the outcome would have been uncertain.

Mr Herivel died at the age of 92 in 2011.

The Ulster History Circle plaque for Mr Herivel was unveiled by his daughter Susan Algie Herivel on Friday.

She told BBC News NI's Evening Extra programme that her father would have been pleased by the recognition.

The Herivel Tip was based on an assumption that German code operators would fail to change some Enigma settings at the start of their shift.

Ms Algie Herivel said the idea came to her father when he was half-asleep.

"It was at the beginning of the time at Bletchley Park and he was in digs in the town and the landlady gave him the sitting room after dinner," she said.

"He would sit with his feet up, I think there was a fire, and on one particular evening he went into a strange half-asleep, half-awake [state].

"He had an idea of a German wireless operator who at the beginning of some major offensive would be starting to cut corners and not sticking to the rules entirely.

"He gave the idea back to his boss Gordon Welchman but everybody thought it was unlikely to happen.

"But the thing is it did happen and that's when so many messages came in."

'It was a team sport'

Mr Welchman later wrote that without the idea the Allies "would have been defeated in May 1940".

Dr David Abrutat, a historian at the intelligence agency GCHQ, said Mr Herivel and the other codebreakers at Bletchley Park were under "extreme pressure".

"In May 1940 [the Herivel Tip] worked and they cracked the code," he said.

"It provided real strategic advantage for the allied forces in occupied Europe."

While Alan Turing is the highest profile among the code breakers, Dr Abrutat said the effort across Bletchley Park was a "team sport".

"It wasn't just one individual changing the world," he said.

A silence was held at war memorials across Northern Ireland to mark Armistice Day on Friday

The Ulster History Circle chairman Chris Spurr said Mr Herivel was an insightful mathematician who discovered a way of breaking the Enigma code by hand.

"His ability in maths was encouraged at Methodist College, and the Ulster History Circle is delighted to commemorate this mathematician and codebreaker with a blue plaque," he said.

Mr Herivel attended the school between 1924 and 1936 and lived at Malone Avenue in the city.

After leaving school he won a scholarship to study maths at Cambridge University.

Capturing war-time memories before it's too late

The Ulster History Circle said Mr Herivel received special praise from Sir Winston Churchill during a visit the then-prime minister made to Bletchley Park during the war.

After World War Two Mr Herivel returned to Northern Ireland and took up positions at Campbell College and Queen's University before moving to Oxford.

His daughter was also present when an unofficial commemorative plaque was installed at her father's Lonsdale Road house in Oxford in 2014.

British embassy guard admits giving secrets to Russians in Berlin

Prosecutors say David Smith, 58, from Paisley, became disillusioned with west and contacted Russian military

<https://www.theguardian.com/world/2022/nov/11/british-embassy-guard-admits-giving-secrets-to-russians-in-berlin?>

Dan Sabbagh and agencies
Fri 11 Nov 2022 18.33 GMT

A security guard who worked for the British embassy in Berlin has pleaded guilty to passing secret material to a Russian military attache in a rare espionage prosecution.

David Smith, 58, faces up to 14 years in jail after admitting to passing on information about the staff and layout of the British embassy – and other secret material between May 2020 and August the following year.

The guard was caught in a sting operation and extradited back to the UK from Germany in April to be prosecuted at the Old Bailey under the Official Secrets Act. He pleaded guilty to eight counts a week ago, but this can only be reported now after a ninth charge was dropped by prosecutors.

A joint investigation by German and British security services concluded he had been selling information to Russia since spring 2020 after MI5 and its European counterparts trailed him for months.

According to the prosecution, Smith shared with Gen Maj Sergey Chukhurov, the Russian military attache, the identities, addresses and telephone numbers of various British civil servants between October and December 2020.

A police raid on Smith's flat revealed he had taken photographs of staff security passes, organisational charts, posters and whiteboards in the embassy, and had shot a walkthrough video revealing some of the building's layout.

Officers also discovered emails and documents marked "secret" – apparently prepared for passing to his Russian contacts – and €800 in cash which could not be accounted for. Police said Smith was living beyond his means.

Smith, originally from Paisley, Renfrewshire, had been employed at the embassy in Berlin as a security guard for about eight years. At some point, prosecutors said he had become disillusioned with the west and become a supporter of Russia.

At his flat in Potsdam, just outside Berlin, police found a Russian flag in the corner of the living room, a Russian navy crest on the wall and a Soviet military cap carrying the hammer and sickle emblem.

Officers also found a draft letter addressed to Col Sivov, a previous Russian military attache, dated 14 May 2020, in which Smith said he worked at the embassy and wanted to remain anonymous.

The guard then offered to provide a book from the embassy's defence section marked "official sensitive", and suggested the Russian "might be able to make use of it".

Smith's lawyer said prosecutors had exaggerated his motivations, and that his actions were of a disgruntled employee, not a spy.

Matthew Ryder KC, defending, told the hearing on 4 November that "the seriousness of the allegations are disputed by Mr Smith", and that the security guard did not have any "negative intention against the UK".

Prosecutors, however, argued that Smith could have acted differently if he was unhappy in his job. "If Mr Smith had merely wanted to lash out and express his frustrations, he could have provided different information," the prosecution said.

They accused him of trying to damage the British embassy and the UK.

A trial of the facts to determine the length of Smith's sentence is expected to take place in February next year. Smith will be remanded in custody until that hearing is concluded.

The spy was hunted for years - may have sold out Säpo's entire personnel list

John Granlund

PUBLISHED: NOVEMBER 11

<https://www.aftonbladet.se/nyheter/a/wArPOn/misstankte-spionen-peyman-kia-42-jagades-i-aratal>

The security police suspected for years that there was a mole at the heart of the intelligence service - but they failed to stop the spying.

Now Peyman Kia, 42, and his brother Payam Kia, 35, are accused of selling defense secrets to a Russian contact in exchange for dollars and gold.

It appears from the investigation that Russia is suspected of having obtained quantities of top-secret reports - and Säpo's entire personnel list.

According to prosecutor Mats Ljungqvist, the top-secret spy investigation went on "for quite a long time" without anyone having any idea about those who leaked from Säpo .

- There were indications that there was a person within the authorities who could be a spy and based on that, the preliminary investigation worked to try to map who it could be, the prosecutor told Aftonbladet.

But on January 16, 2017, one person could be targeted: Peyman Kia.

At the time, he was employed as security manager at the Swedish Food Agency, and for several nights, Säpo's investigators got into his safe, computers and service rooms at the agency. His bank account was also checked time and time again.

But no sufficient evidence was found then.

PLUS: Peyman was arrested - then the brother broke the hard drive
Only after 4 years and 8 months did they have enough on their feet for an arrest and on September 20, 2021, Säpo attacked Peyman Kia in a dawn raid.

The preliminary investigation shows that he has read many sensitive intelligence reports from the Security Police and the Armed Forces for which he lacked authorization during the years when he worked for the two authorities.

It also appears that he handled a file that contained a "complete personnel list" of the employees of the Security Police.

Among the tasks was to support and produce documents for Säpo's management but also during periods to "run cases". In addition, according to the preliminary investigation, he is said to have retained authorizations for areas he no longer worked with, which provided additional transparency, and he also worked as a supervisor for new Säpo employees, which gave him access to their material.

Before Peyman Kia left Säpo, the reading frequency of sensitive reports must have increased, and among these reports there is material that was considered particularly sensitive within the authority:

- That is an extra sensitive and extra secret matter. You should not search for this type of information and should you happen to come across it, you should immediately go to your immediate manager and tell them what happened, says a Säpo employee in questioning.

The security police state in a press release that the man worked for them in 2014-2015, but the preliminary investigation shows in several places that he was also employed there in 2007-2011.

In questioning, a former Säpo colleague tells of how he had been out and about with Peyman Kia on "operations" but that he was later surprised that Kia sought contact with him after the employment ended.

Peyman Kia also worked at the Military Intelligence and Security Service Must where he is said to have read volumes of reports for which he was not authorized, according to the preliminary investigation, where it is established that the reports were handled on a computer that was manufactured after he left Must.

- It is completely insane, there is absolutely no reason and in that case Peyman has had this information after he left us. This should not happen, says a Must manager in questioning.

Large parts of the preliminary investigation are classified, but some of the suspected methods to escape Säpo's counter-espionage appear:

The security police suspect that Peyman Kia used so-called "dead mailboxes" where spy material can be left and later picked up by another person. In this case, it was about public toilets in the Uppsala area.

A spy camera was found at Peyman's brother Payam Kia, which is supposed to imitate a car key.

Both brothers have encrypted a lot of material on computers and USB sticks and after Peyman Kia was arrested, Säpo's detectives were able to follow how the younger brother destroyed a hard drive which he then threw in a bin. Parts of the hard drive could later be recreated.

The security police and prosecutors allege that the two brothers sold the material to Russia and Vladimir Putin's military spy agency GRU.

In the preliminary investigation, most things about Russia are masked as secrecy, but in a note from the younger brother, he writes about a failed meeting with "Rasski", who the prosecutors believe is the Russian contact.

Prosecutor Mats Ljungqvist does not want to reveal how much money it is suspected that the brothers earned from their business. As evidence, the investigators point to Peyman Kia handling at least 380,000 kroner in cash, dollars, only during the period 2016-2017. They also point to handling of gold to "hide" transactions.

- In our opinion, it is only part of the whole, but we have a clear idea of how much this is about, says Mats Ljungqvist.

PLUS: Peyman was arrested - then the brother broke the hard drive

Peyman Kia's lawyer Anton Strand says that his client "denies everything that is put against him".

- He denies crime. As can be seen, he has worked in a very complex environment and has done his very best and denies that he has done anything wrong.

The time in custody with severe restrictions has been trying, according to the lawyer.

- A detention period of over a year with severe restrictions is, of course, very exhausting for all people. It has been a frustrating time for him.

35-year-old Payam Kia also feels frustration, according to defense lawyer Björn Sandin.

- His attitude is as it has been all along. He denies wrongdoing and disputes responsibility. He has given answers to the questions that the prosecutor and the police had, so he is a little frustrated that the charges are brought against him today.

Why does he write about money and GRU?

- The problem is that I could give an explanation for that part, but it is covered by confidentiality, says Björn Sandin.

Prosecutor Mats Ljungqvist does not want to answer whether there are any additional suspects in the investigation or whether any person from the Russian embassy has been expelled, declared "persona non grata", due to the investigation.

- For reasons of principle, I do not want to comment on it, he says.

The two brothers face life in prison if convicted of the charge of aggravated espionage. The trial is expected to begin in two weeks in the Stockholm District Court.

[Many thanks BRIXMIS]

In a Wary Arctic, Norway Starts to See Russian Spies Everywhere

December 12, 2022 in News

<https://dnyuz.com/2022/12/12/in-a-wary-arctic-norway-starts-to-see-russian-spies-everywhere/>

TROMSØ, Norway — In hindsight, some things just didn't add up about Jose Giammaria.

For one, the visiting researcher at the University of Tromsø, in Norway's Arctic Circle, was ostensibly Brazilian. But he couldn't speak Portuguese. Then there was the fact that he self-funded his visit, an oddity in academia, and even planned to extend it — yet he never talked about his research. But he was always helpful, even offering to redesign the home page for the Center for Peace Studies, where he worked.

ADVERTISEMENT

That was until Oct. 24, 2022, when Norway's security police, the PST, arrived with a warrant to search his office. Days later, they announced his arrest as a Russian spy, named Mikhail Mikushin.

The revelation sent a chill through campus, said Marcela Douglas, who heads the Center for Peace Studies, which researches security and conflict. "I started to see spies everywhere."

So is Norway, and much of the rest of Europe, too.

As the war in Ukraine bogs down and Moscow's isolation increases, European nations have grown wary that a desperate Kremlin is exploiting their open societies to deepen attempts at spying, sabotage and infiltration — possibly to send a message, or to probe how far it could go if needed in a broader conflict with the West.

Mr. Mikushin is one of three Russians recently arrested in Europe on suspicion of being "illegals" — spies who embed in a local society for long-term espionage or recruitment. In June, an intern at the International Criminal Court, also with a Brazilian passport, was arrested in The Hague and charged with spying for Russia. In late November, a Swedish raid caught a Russian couple accused of espionage.

ADVERTISEMENT

Other suspicious incidents have popped up across Europe: In Germany, drones found flying over military sites where Ukrainians forces were being trained are strongly suspected by German officials of being Russian intelligence. Undersea cables cut in France, while not attributed to malignant intent, have raised suspicions among security analysts. And a hack of fuel distribution networks in Belgium and Germany days before Russia's invasion also raised alarm.

Not all of the incidents can be traced to the Kremlin with certainty, and in many places, heightened vigilance and real concern have become hard to separate from widening paranoia. Russia has called a string of recent Norwegian arrests, mostly of Russian citizens for flying drones, a form of "hysteria."

Norway, however, may have more reasons to worry than most.

Now that Western sanctions have all but cut off Russian fossil fuels to Europe, Norway is the biggest oil and gas supplier to the continent. Off its Arctic coast lie underwater cables that are critical for internet servicing for the financial hub of London, and for passing satellite imagery from the high north, where Norway borders Russia for 123 miles, across the Atlantic to the United States.

That vital role has felt all the more vulnerable since September, when explosions destroyed the Nord Stream pipelines between Russia and Germany, and for which Moscow and Washington have traded blame.

"It was a wake up call. The war is not only in Ukraine. It can also affect us, even if it is hard to attribute," said Tom Røseth, a professor at the Norwegian Defence University College.

A number of more conventional Russian spies have been rounded up and expelled in recent years, possibly making Russia more reliant on sleeper agents, especially as the war in Ukraine stumbles.

The recent surge in cases, Mr. Roseth said, reflected Russia's need for its dormant spies to come through.

"At this point in time in Europe, with the pressure of the situation that Moscow is in, it wants its network to deliver," he said. "Even though these activities have been there before, I think they take higher risks now."

In Norway's case, unease began rising after a military-grade drone was spotted in September over an oil platform in the North Sea. Soon, there were more drone sightings over oil and gas installations, and a power station. In October, the Bergen airport, located near the country's largest naval base, was closed for two hours after drones were observed in the area.

Norwegians began questioning other incidents that had happened earlier in the year: An underwater cable damaged in January, which transmitted satellite images for Western space agencies. A damaged water reserve near several military sites, not far from Tromsø. What if these were not accidents or troublemakers, but Russian sabotage?

"Attacks like that are useful — same as surveillance over oil rigs," said Ole Johan Skogmo, a regional police inspector, who said the PST is still investigating the damaged water reserve. "We don't know exactly who did it. But now, they know that we know someone could do it."

Norwegian citizens have dutifully responded to warnings to be alert, inundating police with calls over drone sightings, or foreigners allegedly acting suspicious.

But now, some worry that hyper vigilance has gone too far, especially in terrain as murky as suspected espionage.

On a recent afternoon, in the pitch black of Arctic winter, Tromsø's tiny regional courthouse was hearing two cases against Russian citizens accused of flying drones.

Neither was accused of spying, which is hard to prove. Instead, they were charged with violating European sanctions that ban Russians from flying aircraft, which Norway is now interpreting to include Russian individuals operating hobby drones.

Seven Russians were arrested in mid-October for flying drones, and four have been put on trial. Two have been convicted and ordered to serve prison sentences of 90 or 120 days.

Among those caught up in the arrests is Andrey Yakunin, the son of Vladimir Yakunin, a longtime ally of Russia's president, Vladimir V. Putin, in a trial closely followed across the country.

The younger Yakunin, a businessman who lives in the United Kingdom and holds British citizenship, has distanced himself from Russia's invasion.

He was arrested after his yacht, the Firebird, was stopped by Norwegian authorities, who asked if he had a drone. He showed them a drone used to capture images of himself and his crew skiing and fishing among the glacial landscapes of Arctic Norway.

Prosecutors are pursuing a 120-day sentence.

"For sure I'm not a spy — though I do own a full collection of James Bond movies," joked Mr. Yakunin, in an interview after his trial began on Dec. 3.

Speaking to the Times, Mr. Yakunin refused to comment on whether his arrest was political, but argued it was an oddity that he and three other men were all arrested over a short period in October: "As a student of statistics, this does not fit normal distribution."

Across the hall, in a tiny courtroom away from the cameras, a graying man in denim, Aleksey Reznichenko, a Russian engineer, tearfully pleaded his own case in a much lower profile trial. He was arrested after taking pictures of fences and the parking lot outside the control tower at Tromsø airport.

"It was a gut feeling," said Ivar Helsing Schröen, the air control manager, who grew suspicious and called the police. "Something was very strange."

In court, Mr. Reznichenko teared up as he spoke through a translator in Russian, saying he feared for his family, for whom he was the sole breadwinner.

He was found with photographs of a military helicopter and the nearby Kirkenes airport. He said that taking photos of aircraft and airports is a longtime hobby. But in any case, neither photograph was illegal. Instead, Mr. Reznichenko was charged for flying a drone.

Prosecutors and defense attorneys alike say that in prosecuting such cases Norway has crossed into a legal gray area that challenges its democratic values.

The Mikushin case has sparked a tussle between security analysts and academics over how strictly to monitor and restrict foreign researchers or international collaboration, which could have a chilling effect on important research.

In the drone cases, Mr. Yakunin's and several other defense lawyers have argued that sanctioning Russians based on nationality is discriminatory, and potentially a human rights violation.

"There is a question whether this is the law — but if the law's wording covers this, the law is a problem," said John Christian Elden, Mr. Yakunin's lead lawyer.

The country itself seems to be conflicted as to how to handle the situation. The judges in both Mr. Yakunin and Mr. Reznichenko's cases have now decided to acquit them. But prosecutors are appealing both cases. Mr. Yakunin will be back in Tromsø's court in January.

"I am not out of the woods yet," he told journalists after being released from custody.

Ola Larsen, Mr. Reznichenko's lawyer, said Norway's PST was being unusually aggressive to make a point.

"Politics is playing a role," she said. "They want to make a statement to the Russians."

Security jitters in Norway's Arctic were high before the invasion of Ukraine. The northern frontiers had friendly relations among locals, who trade with one another, but there have been several suspected espionage cases, dating back to the Cold War.

Some espionage cases have bordered on the comical. In 2019 a beluga whale found by Norwegian fisherman in its Arctic waters was widely speculated to be a "spy whale" escaped from Russia's military. Norwegian media dubbed him "Hvaldimir" — a portmanteau of the Norwegian word for whale and the name Vladimir.

Yet those like Mr. Schröen, the airport control manager, insist caution is always warranted. Checking the news from his tower, just a few miles from the courthouse, he felt no guilt over sending a man to trial.

Spies, he says, are definitely interested in the Arctic: "You'd have to be naïve to think it was otherwise

Swedish police drop from the sky to arrest couple for 'spying'

Oliver Moody

Wednesday November 23 2022, 12.01am, The Times

<https://www.thetimes.co.uk/article/swedish-police-drop-from-the-sky-to-arrest-couple-for-spying-gcj5b3j9p>

The early-morning raid in a Stockholm suburb was conducted in less than a minute to prevent the suspects from destroying incriminating information

A married couple in Sweden have been arrested on suspicion of spying for nearly a decade, days after the authorities exposed two alleged Russian moles in the security services.

The pair, who have not been named but are believed to be in their sixties and to have moved from Russia about 20 years ago, were detained at a villa in a Stockholm suburb. The early-morning raid, in which police abseiled from helicopters, was conducted in less than a minute to prevent the suspects from destroying incriminating information.

Swedish officials have been tight-lipped about the details of the suspected spying. The man is accused of "gross illegal espionage activities" over a period of at least ten years, while his wife is alleged to have assisted him.

Sapo, Sweden's main counter-intelligence service, said the espionage had been directed against Sweden and several other countries, although it declined to specify which ones.

The investigation had been planned for "some time" by Sapo, the police and the armed forces, according to Stefan Hector, head of the national operations division of the Swedish police.

Sapo insisted the case had nothing to do with the recent arrest of two Iranian-born brothers alleged to have spied for Russia for a decade while working for the armed forces and intelligence services.

Peyman and Payam Kia, 42 and 35, are said to have worked in agencies including the Office for Special Acquisition, the most sensitive part of Sweden's military intelligence.

Prosecutors believe they were passing information to the Russian GRU military intelligence agency, one of the Kremlin's most powerful espionage wings. One intelligence expert has said the spy scandal has the potential to be the most damaging in Sweden's modern history. Their trial is expected to begin this week.

Counter-intelligence officers are believed to have been monitoring Peyman Kia for at least five years. It is unclear whether the timing of the four arrests was coincidental or reflects a systematic operation to root out suspected moles.

Mossad head reveals how Syria found Eli Cohen, discloses spy's final message

Inaugurating museum named for legendary secret agent, Barnea says Cohen was caught because his cables were 'intercepted and triangulated,' not because he transmitted too frequently

By TOBIAS SIEGAL

12 December 2022, 4:32 pm

<https://www.timesofisrael.com/mossad-head-reveals-how-syria-found-eli-cohen-discloses-spys-final-message/?s=09>

Mossad chief David Barnea on Monday revealed the last message sent out by legendary Israeli spy Eli Cohen on the day of his capture in Syria, along with new information on what led to his arrest.

Amid years of dispute over the circumstances of Cohen's cover being blown, — it has been alleged that he transmitted too often, or was pressured by his handlers — Barnea said new "in-depth" research had definitively established that Cohen was captured "simply because his transmissions were intercepted and triangulated by the enemy."

"Eli Cohen was among our best agents," Barnea said at an event marking the inauguration of the new Eli Cohen Museum in Herzliya.

Barnea praised Cohen's "fighting spirit, courage, values and devotion" and said he serves as "a source of inspiration" for all Mossad personnel.

"We all learn from him, even today, from his Zionism, his sacrifice and his dedication."

By signing up, you agree to the terms

Cohen infiltrated the top echelons of Syria's political leadership in the years leading up to the 1967 Six Day War. The information he obtained is believed to have played a key role in Israel's overwhelming success in that war.

The last transmission received by Israel from Israeli spy Eli Cohen on January 19, 1965, which was revealed by Mossad chief David Barnea during the inauguration ceremony of the Eli Cohen Museum in Herzliya, December 12, 2022. (Mossad)

He was caught in 1965 and hanged in Damascus. But the circumstances surrounding his capture have since been disputed and are a source of an ongoing debate. Some have argued that Cohen failed to follow procedures and had attempted to send out too many messages, which drew the Syrians' attention. Others have blamed Cohen's superiors, saying he had been put under immense pressure to provide new information, which led to his capture.

Nearly 60 years later, Barnea provided an answer, albeit a vague one.

"I will honor this holy place and reveal, for the first time, following in-depth research that was carried out recently, that Eli Cohen was not captured due to the quantity of his transmissions or pressure from headquarters to transmit too frequently," he said.

"Eli Cohen was captured simply because his transmissions were intercepted and triangulated by the enemy," Barnea said. "This is now an intelligence fact."

He also revealed the content of Cohen's last transmission, received on January 19, 1965, the day he was captured.

Cohen's last report was "about a discussion at the Syrian General Staff with the participation of then-president Amin Al-Hafez," Barnea said.

He said the Mossad would donate the original document containing Cohen's transmission to the new museum established in his memory.

Barnea praised Cohen's "contribution to the security of Israel" and said Israel's national intelligence agency would continue to seek more information about the time Cohen spent in Syria.

He also vowed to continue the search for Cohen's remains.

In February 2021, it was reported that Russia, in cooperation with Syrian authorities and under Israeli pressure, was searching the area of the Yarmouk refugee camp in southern Damascus for Cohen's body in order to transfer it to Israel.

The following month, an object believed to have belonged to Cohen was reportedly transferred to Israel. Quoting an unnamed Syrian government source, Israeli reports said at the time that the item could be a document or an article of Cohen's clothing.

Then-prime minister Benjamin Netanyahu's office denied the reports and it remains unknown whether such an object actually existed

FBI agents raid home of sleuth on the trail of Area 51's secrets

Keiran Southern - Los Angeles

Taken from the TIMES 18/11/2022

For the past 23 years, Joerg Arnu has been a man on a mission to reveal the top secret military projects to be found in a corner of the Nevada desert known as Area 51.

Arnu, who gives little credence to longstanding claims that aliens may be found at the base, has built up a devoted following for his conspiracy website, Dreamland Resort. On it, he monitors comings and goings at the mysterious test base.

Area 51 was founded in 1955 to test the newly developed U-2 spy aircraft. It is claimed to be the test centre for the next generation of US secret aircraft.

However, it appears Arnu has gone too far after his homes in Rachel, a tiny settlement next to the base, and in Las Vegas were searched by the FBI and the Air Force Office of Special Investigations.

Arnu said that between 15 and 20 agents in riot gear ransacked the properties to "send a message" to other sleuths.

According to Bryon McGarry, spokesman for Nellis air force base in Las Vegas, the authorities seized potential evidence. "This is an open and ongoing law enforcement investigation between the Las Vegas FBI and Air Force OSI," McGarry said.

Arnu, who described himself as a senior citizen, said they may have been prompted by aerial pictures of Area 51 on his website. He said the experience was "humiliating" for him and his partner.

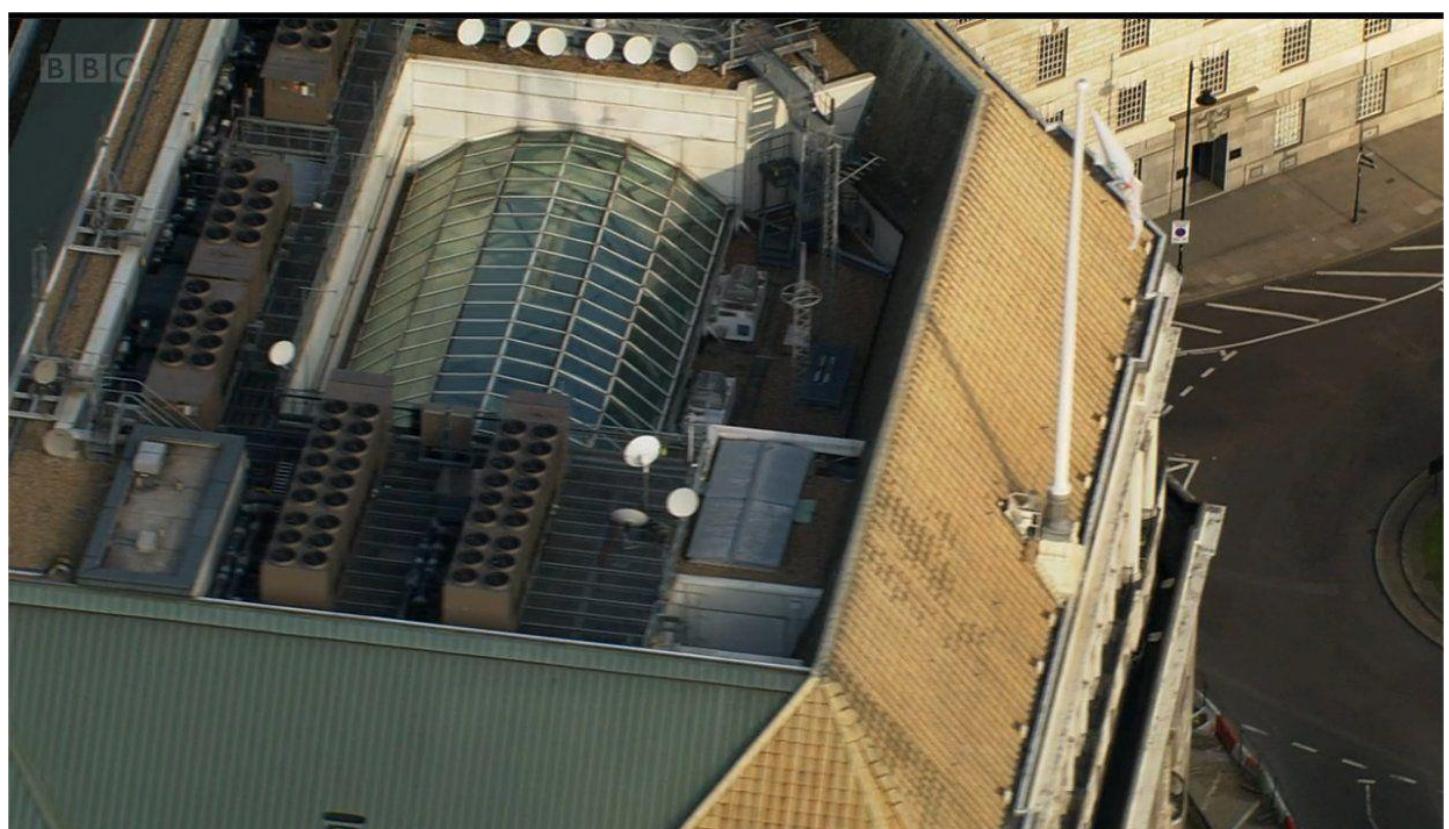

"All my laptops, phones, memory sticks, cameras, drone and other items were seized," he said on his website. "I was left in Rachel with two broken doors, broken furniture and zero means to communicate. Our Vegas home fared a little better, with a broken front door and torn down blinds."

Arnu said he had lost "all my data", including medical documents and financial and tax records. He is facing a bill of at least \$25,000 for repairs and legal costs.

"To the best of my knowledge I have not broken the law," Arnu said. He added that the search warrant had 40 pages missing and the FBI had not returned his calls.

Area 51 has been the subject of what the US government describes as conspiracy theories involving stories of aliens. Bob Lazar, an Area 51 "whistleblower", claims he was employed to reverse-engineer alien technology, though critics accuse him of perpetrating a hoax.

Arnu's website includes a claimed sighting in October last year of a Northrop Grumman RQ-180 drone, a stealth aircraft whose existence has not been acknowledged by the Pentagon.

North Korea boasts about new spy satellite pictures - but analysts have some bad news

Grainy black-and-white images of Seoul captured by a new 'military reconnaissance satellite' dismissed as 'useless' by experts
By Julian Ryall IN TOKYO 19 December 2022 • 1:49pm

Images of Seoul that North Korea has boasted were captured by a new "military reconnaissance satellite" have been dismissed as "useless" by analysts.

Grainy black-and-white pictures of the South Korean capital and the port city of Incheon were published in Monday's edition of the state-run Rodong Sinmun newspaper, along with images of the rocket that launched the satellite into orbit over the weekend.

The North's National Aerospace Development Administration reported that the launch had been designed to test cameras, control equipment and the transmission of images to a ground station.

A NADA official said the launch had been "an important success" that served as the "final gateway" to the placing of spy satellites in orbit in the future.

Images unlikely to be useful for military

But security analysts are not as impressed.

Soo Kim, a security analyst at the RAND Corporation in California, said the images were unlikely to be good enough to be useful to the army.

"From the images released, the resolution does not appear to be so impressive for military reconnaissance," Ms Kim told the Associated Press.

Martyn Williams, founder of the North Korea Tech blog, went further.

"The image is 20m [65.6 feet] resolution taken at 500 km [310.7 miles], which is useless for military recon," he said.

Others described the images released by Pyongyang as "crude" and primarily designed to allow the North to boast about its new intelligence-gathering capability.

A rocket with the test satellite is launched at the Sohae Satellite Launching Ground in North Korea on Sunday CREDIT: KCNA via KNS

The new images come a little over 10 years after the North launched its first satellite, the Kwangmyongsong-3, describing it as "a proud fruition of the Workers' Party of Korea's policy of attaching importance to science and technology".

The satellite achieved orbit and Pyongyang insisted it was operating as planned, although Western sources said it was "tumbling" and probably out of control.

Pyongyang seems to be determined to push ahead with the project, despite international sanctions and much of its population reportedly hungry, with the regime's space agency announcing, "It would finish the preparations for the first military reconnaissance satellite by April 2023".

The birthday of Kim Il-sung, the founder of the North Korean nation who died in 1994, falls on April 15 and it is likely that Kim Jong-un, his grandson, will time the launch of a satellite to coincide with that red letter day on the North Korean calendar.

December 2022:

No logs

M23 O ICW**M23 – Very Active from Mid- November through December.**

M23 reappeared in Mid-November & once again we owe a debt to Ary, (AB), for alerting us to its return. Although not the most interesting station to monitor with its repetitive content, it is certainly one of the most intriguing.

Whoever is responsible for these transmissions is going to a lot of trouble to ensure that their message is heard & why are there different transmission times allocated to each separate code or message, with OOO having over twice the air time to that given to 951, for example?

Also noted the characteristic single dash at H+59m every hour on days when the station was active. Ary, (AB) reports that this hourly dash was present 24 hrs a day – except during message transmissions.

5345	1559 - 1722z	18 Nov	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB	FRI
5345	1048 - 1221z	19 Nov	OOO (x3) repeated (1hr 22m)		AB	SAT
	1559 - 1722z	19 Nov	OOO (x3) repeated (1hr 22m)	Followed by single dash on ending	AB/BR	SAT
5345	1048 - 1221z	20 Nov	OOO (x3) repeated (1hr 22m)		AB/BR	SUN
	1559z	20 Nov	NRH		AB/BR	SUN
5345	1419 – 1542z	Mon 21 Nov – Mon 28 Nov (Daily) OOO (x3) repeated (1hr 22m)			AB/BR/Spectre	
	1559 – 1722z	OOO (x3) repeated (1hr 22m)			AB/BR/Spectre	
	1616z	Friday 30 Nov OOO OOO OOO Strong QRN2 QSB2			Spectre	

A change in schedule & content followed on Tuesday, 29 November which continued until Sunday, 04 December;

5345	Tue 29 Nov – Sun 04 Dec (Daily)				
	0959 – 1046z	29 Nov	000 (x3) repeated (47m)	Three zeros (5 dashes) (x3)	AB/BR/HFD
	1559 – 1646z	29 Nov	000 (x3) repeated (47m)		AB/BR

Another change for Monday, 05 December - This time sending a number, 951, for the first transmission;

5345	1359 – 1435z	05 Dec	951 (x3) repeated (36m)		AB	MON
	1559 – 1722z	05 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR	MON

Changing again on Tuesday, 06 December. Same content with added early scheds;

5345	0859 – 0935z	06 Dec	951 (x3) repeated (36m)		AB	TUE
	0959 – 1122z	06 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR/Spectre	WED
	1359 – 1435z	06 Dec	951 (x3) repeated (36m)		AB	TUE
	1559 – 1722z	06 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR	TUE
5345	0859 – 0935z	07 Dec	951 (x3) repeated (36m)		AB/BR	WED
	0959 – 1122z	07 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR/Spectre	WED
	1359 – 1435z	07 Dec	951 (x3) repeated (36m)		AB/BR	WED
	1559 – 1722z	07 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR	WED

On Thursday, 08 December, the two later scheds failed to appear. It was also noted that the hourly dashes now ceased;

5345	0859 – 0935z	08 Dec	951 (x3) repeated (36m)		AB/BR	THU
	0959 – 1122z	08 Dec	OOO (x3) repeated (1hr 22m)	Three letter 'O' (3 dashes) (x3)	AB/BR	THU

Nothing further was reported for the next three days then M23 reappeared once again with a new sched & a different number, 654;

5345	Mon 12 Dec – Sun 18 Dec				
	0959 - 1046z		000 (x3) repeated (47m)	Three Zeros (5 dashes) (x3)	AB/BR/tiNG
	1319 - 1404z		654 (x3) repeated (45m)		AB/BR/tiNG
	1559 - 1646z		000 (x3) repeated (47m)	Three Zeros (5 dashes) (x3)	AB/Anon/BR/tiNG
	1759 - 1844z		654 (x3) repeated (45m)		AB/Anon/BR/tiNG

On Monday, 19 December the 654 scheds appeared – But the 000 scheds were missing;

5345		Mon 19 Dec – Sat 31 Dec				
	1319 - 1404z		654 (x3) repeated	(45m)		AB/BR
	1759 - 1844z		654 (x3) repeated	(45m)		AB/BR

Slight time-slip was noted on later transmissions, with transmissions starting & ending approximately a minute earlier.

PoSW also logged M23 at length and posted his log for this, reading much like those above but with some additional interesting comment:

Return of M23 CW on 5345:-

The M23 slow Morse station returned to 5345 kHz in the third week of November with a familiar format:-
21-Nov-22, Monday:- 1712 UTC, sending a slow 3 x 3 dash “OOO”, strong signal. First time I have heard an M23 since mid-June of this year. Stopped shortly after 1721 UTC. Nothing further heard throughout the rest of the evening.

22-Nov-22, Tuesday:- 1508 UTC, in progress with “OOO”, stopped after 1541 UTC.

1559 UTC, starting up with “OOO”, ended at approx 1721:20s UTC, a single long dash heard a few seconds afterwards, looks like two somewhat long transmissions running.

23-Nov-22, Wednesday:- 1419 UTC, just after, “OOO”, stopped after 1541 UTC.

1559:5s UTC, “OOO”, stopped after 1721 UTC followed by the long dash.

These two transmissions lasting over an hour and twenty minutes heard at these times on the following Thursday, Friday, Saturday, Sunday and Monday before changing times and content:-

29-Nov-22, Tuesday:- 1004 UTC, first time heard in the UK morning since re-appearing,

now sending 3 x 5 dash “000”, still on when checked at 1030 and 1040 UTC, had gone when checked at 1058. Heard a short key-down “blip” at approx 1059, a feature noted

at around a minute before the hour over the past few days.

1604 UTC, in progress again with, “000”, stopped at approx 1646 UTC.

30-Nov-22, Wednesday:- 0958:53s UTC, starting up with “000”, stopped just before 1046 followed by a single long dash.

1558:53s UTC, starting up again, pre-transmission blip heard at 1556, missed the ending.

Continued with this format for the first days of December until Sunday the 4th after which things changed again:-

5-Dec-22, Monday:- No sign of M23 on 5345 when monitored just after 1000 UTC but was heard later on with different content:-

1359 UTC approx, starting up with, “951”, still on when checked at 1430z, had gone when checked again at 1445.

1559 UTC, just before, starting up, back to sending the 3 x 3-dash “OOO”, stopped at around 1721 UTC.

6-Dec-22, Tuesday:- 0858:42s UTC, starting up with “951”, a pre-transmission blip heard about three minutes earlier, stopped 0934:41s UTC.

0958:41s, starting up with the 3 x 3 dash “OOO”, still on when checked at 1040z, monitoring ceased, things to do!

1358:41s UTC, “951”, stopped at 1434:39s UTC, as always followed by single dash.

1558:41s, “OOO”, stopped after 1721 UTC.

7-Dec-22, Wednesday:- schedule heard today, rounded off to the nearest minute:-

0859 UTC, just before, “951” until 0935 UTC, just before.

0959 UTC, just before, “OOO” until 1121 UTC, just after.

1359 UTC, just before, “951” until 1435, just before.

1559 UTC, just before, “OOO” until 1721 UTC, just after.

Changed again:- 8-Dec-22, Friday No sign of M23 “OOO” when checked at 1559 UTC

Oddities

Unidentified Marker?

Gary reported an unidentified signal on 5082kHz USB on Sunday, 06 November. Signal was reminiscent, but not identical to the Buzzer with a monotone buzz, spaced at regular intervals, but around twice the speed of that used by the Buzzer. Heard by Gary at his QTH near Cardiff with a long wire aerial into an FRG7700 receiver.

A check on the Twente University SDR showed the signal at good strength, as seen from the screenshot below.

5082kHz 1945z 06 November

Screenshot of Unknown Marker on Twente SDR

Some log analysis and comment from PoSW:

First + Third Thursdays in the Month, 0600 + 0700 UTC Schedule:-

Frequencies shown in prediction list in En127 of Nov-21 hold true for this year too:-
3-Nov-22:- 0706 UTC, 20140 kHz, second sending in progress, suddenly realised over breakfast that this was the first Thursday of a new month, missed 0600z transmission.
Weak signal at first, gradually became stronger, ended around 0714:30s UTC with, "892 892 61 61 00000".

4-Nov-22, Friday:- 0600 UTC, 18285 kHz, repeated on the following day, very weak at first, unreadable, started to become much stronger after 0605z.

17-Nov-22:- Nothing heard of first sending for the first twelve minutes or so:-

0612 UTC, 18285 kHz, E06 emerging from the noise, ended a couple of minutes later with, "923 923 61 61 00000".
0700 UTC, 20140 kHz, calling "507", DK/GC "923 923 61 61", reasonable signal all the way through, S4 to S6.

18-Nov-22, Friday:- Nothing at all heard of the first sending at 0600z on 18285, no doubt someone with a better antenna than mine heard it.
0700 UTC, 20140 kHz, S5 to S7 with some fading. After the end of transmission at around 0714:30s carrier went off - but came back after 30 seconds or so with computer shut-down sound, XP or whatever it is, which used to be a regular feature of the now defunct Thursday and Friday E06 and G06 schedules.

1-Dec-22:- Nothing heard of the 0600 UTC on 14575 kHz, predicted frequency for this month, slightly better copy of the second sending:-
0709 UTC, 17420 kHz, nothing heard until about nine minutes into the transmission, signal came up from out of the noise, rapidly became stronger, ended after 0713z with "768 768 54 54 00000".

2-Dec-22, Friday:- 0700 UTC, 17420 kHz, calling "923", DK/GC "768 768 54 54", weak at first, stronger after a few minutes, nothing readable from the 0600z sending.

15-Dec-22:- 0700 UTC, 17420 kHz, call "923", DK/GC "604 604 51 51", good signal, nothing audible at 0600z on 14575.

16-Dec-22, Friday:- 0700 UTC, 17420 kHz, good signal, again nothing readable at 0600z.

A Thursday Night at Eight E06:-

17-Nov-22, Thursday:- 2000 UTC, 5384 kHz, something of a surprise, very strong carrier noted on 5384 at around 1940 UTC, audio tone followed by single spoken "853", E06 OM, at approx 1949. Started on the hour, 8 pm in these parts, call "853", DK/GC "149 149 60 60". Ended just before 2014:30s UTC, carrier stayed on for a further minute or so before going off. By far the strongest signal in this part of the short-wave spectrum at this time of the evening.

No sign of a repeat on Friday the 18th, nothing found on the Thursday of the following week, the 24th.

31/12	116 000	Strong

PoS also sent in his logs with additional notes and analysis:

Saturday Schedule, 1400 UTC Start:-

5-Nov-22:- 1400 UTC, 10323 kHz, “310 310 310 000”, strong signal.
1420 UTC, 9123 kHz, also strong.

12-Nov-22:- 1400 UTC, 10323 kHz, “310 310 310 000”, weak signal, much weaker than on the 5th.
1420 UTC, 9123 kHz, 6 to 7 on the S-meter.

19-Nov-22:- 1400 UTC, 10323 kHz, “310 310 310 000”, weak.
1420 UTC, 9123 kHz, much stronger, pushing the S-meter way over the 9.

26-Nov-22:- 1400 UTC, 10323 kHz and 1420 UTC, 9123 kHz, both strong, over S9, “310 310 310 000”.

10-Dec-22:- 1400 UTC, 9143 kHz, “116 116 116 1”, message, strong signal. DK/GC “379 277” x 2. Did not end until 1430z.
1435 UTC, 8143 kHz, second sending, very strong.
1510 UTC, 7643 kHz, also very strong.

Here's an interesting fact:- this schedule also sent a message with a group count of 277 in December of last year, Saturdays 4th and 11th of December 2021, with a DK of 968.

Today's message was no doubt transmitted on last Saturday, the 3rd; Sod's Law in operation here, I was not at home to monitor it, must be the first time for several months that this schedule sent a message.

17-Dec-22:- 1400 UTC, 9143 kHz, “116” and “379 277” again, good signal.
1435 UTC, 8143 kHz, very strong signal.
1510 UTC, 7643 kHz, also very strong.

24-Dec-22:- 1400 UTC, 9143 kHz, “116” and “379 277” yet again., very strong signal.
1435 UTC, 8143 kHz and 1510 UTC, 7643 kHz, both also very strong.

Sunday Schedule, 0700 UTC Start:-

Always the same format as transmitted on the Saturday schedule above, and also like the above has moved one hour with the ending of British Summer Time on the last weekend in

October, clocks back one hour, so appears at the same local time in the UK, in this instance 7 am. Also as with the above using the same frequencies as in the same months in past years.

6-Nov-22:- 0700 UTC, 10268 kHz, "201 201 201 000", weak signal.
0720 UTC, 11068 kHz, much stronger.

13-Nov-22:- 0700 UTC, 10268 kHz, very weak, could just about hear the E07 OM way down in the noise.
0720 UTC, 11068 kHz, much stronger, peaking S9, "201 201 201 000".

20-Nov-22:- 0700 UTC, 10268 kHz, weak and 0720 UTC, 11068 kHz, much stronger, "201 201 201 000".

27-Nov-22:- 0700 UTC, 10268 kHz, stronger signal than on previous Sundays in this month,
"201 201 201 000".
0720 UTC, 11068 kHz, peaking around S7.

4-Dec-22:- 0700 UTC, 9326 kHz, weak signal and local interference making for difficult copy to say the least, "345 345 345 1" (?), if heard correctly means a message which would be the first one from this schedule for some time. Became too weak to copy. Nothing audible from the repeats on predicted frequencies 10426 and 11526.

Update:- Was probably the message with a group count of 277 which took 30 minutes to transmit so listening for the second sending at 0720z and the third at 0740z would not produce results.

11-Dec-22:- 0700 UTC, 9326 kHz, very weak, just able to confirm message.
0735 UTC, 10426 kHz, also very weak, just about detectable.
0810 UTC, 11526 kHz, third sending, good signal, peaking over S9 with occasional fading,
"345 345 345 1", DK/GC "379 277", as expected.

18-Dec-22:- 0700 UTC, 9326 kHz, "345 345 345 1", DK/GC "379 277", reasonable signal for a change.
0735 UTC, 10426 kHz, also stronger than usual.
0810 UTC, 11526 kHz, strong.

Saturday + Thursday Schedule, 1410 UTC Start:-

Frequencies as shown in the prediction list in En127 of November of last year. Unusually for E07 stays on UTC with the ending of British Summer Time so now starts at 2.10 pm

in the UK so on Saturdays is interleaved, so to speak, with the E07 schedule that starts at 2 pm.
5-Nov-22, Saturday:- 1410 UTC, 11574 kHz, "327 327 327 000", weak signal.

1430 UTC, 10274 kHz, very weak, only just readable.

10-Nov-22, Thursday:- 1410 UTC, 11574 kHz, "327 327 327 1", message, DK/GC "6884 49" x 2, weak signal.
1430 UTC, 10274 kHz, very weak.
1450 UTC, 9274 kHz, inside the 31 metre broadcast band, strong station on 9275 making copy difficult.

12-Nov-22, Saturday:- 1410 UTC, 11574 kHz, very weak signal, unreadable.
1430 UTC, 10274 kHz, very weak, could just hear "327..1" preamble.
1450 UTC, 9274 kHz, very weak, strong broadcaster on 9275 making things worse.

17-Nov-22, Thursday:- going from bad to worse, nothing heard on any of the frequencies.

19-Nov-22, Saturday:- 1430 UTC, 10274 kHz, very weak, could just make out the "000" of a no-message transmission, nothing heard at 1410z on 11574.

Nothing audible on any frequency of this schedule on either 24-Nov, Thursday, or 26-Nov, Saturday.

8-Dec-22, Thursday:- Nothing readable at 1410 UTC on predicted frequency 10226 kHz, or at 1430 on 9226. Third sending was much better:-
1450 UTC, 8126 kHz, "674 674 674 1", DK/GC "8343 77" x 2.

10-Dec-22, Saturday:- 1410 UTC, 10226 kHz and 1430 UTC, 9226 kHz, both very weak, unreadable, again the third sending the only one readable:-
1450 UTC, 8126 kHz, "674" and "8343 77" again.

17-Dec-22, Saturday:- 1410 UTC, 10226 kHz, "674 674 674 000", stronger than usual.
Nothing readable at 1430z on 9266.

24-Dec-22, Saturday:- 1410 UTC, 10226 kHz, very weak, unreadable, became a bit stronger for a short time around 1414z, message.
1430 UTC, 9226 kHz, "674 674 674 1", sank into noise, unreadable.
1450 UTC, 8126 kHz, third sending much better as usual, DK/GC "126 48" x 2.

Tuesday + Friday Schedule, 1500 UTC Start:-

A schedule had been noted in October running at the above days and time; took some time to find in November, the expectation was that it would shift by one hour with the ending of British Summer Time so that it would show up at the same UK local time in November as it did in October, 4 pm, which has been the usual routine for E07 schedules in the past. Not so for this one, stayed on UTC so was found still starting at 1500 UTC, 3 pm in the UK, in November.

11-Nov-22, Friday:- 1524 UTC, 13537 kHz, strong E07 message in progress, must be the second sending, interference from a rapidly sweeping carrier. Ended with "000 000" at 1534:40s UTC.
1541 UTC, 12137 kHz, third sending found calling "751 751 751 1", DK/GC "331 146" x 2, weaker signal than the second sending. Guessing that the first sending is on 14737.

15-Nov-22, Tuesday:- 1500 UTC, 14737 kHz, "751 751 751 000", weak signal.
1520 UTC, 13537 kHz, stronger with interference.

18-Nov-22, Friday:- 1500 UTC, 14737 kHz, "751 751 751 000".

1520 UTC, 13537 kHz, second sending with swept carrier interference.

More on the swept carrier:- Looking at You Tube on the computer I saw something posted by "Receiver 1954" - for thus he styles himself - which was a recording of E07 on this very frequency of 13537 complete with the rapidly sweeping carrier interference which, R1954 informs the viewer, is called CODAR wave height coastal radar.

22-Nov-22, Tuesday:- 1500 UTC, 14737 kHz, "751 751 751 1", message, DK/GC "9695 102", weak signal.

1520 UTC, 13537 kHz, with the usual interference.

1540 UTC, 12137 kHz, strongest of the three transmissions.

25-Nov-22, Friday:- 1500 UTC, 14737 kHz, "751" and "9695 102" again.

1520 UTC, 13537 kHz and 1540 UTC, 12137 kHz, repeats.

29-Nov-22, Tuesday:- 1500 UTC, 14737 kHz and 1520 UTC, 13537 kHz, "751 751 751 000".

Took a while to find this one in December:-

16-Dec-22, Friday:- 1501 UTC, 13539 kHz, found in progress with "512 512 512 000".

Close to the frequency used for the second sending in November and suffering from the same CODAR interference.

1520 UTC, 12139 kHz, second sending, no problem to find, strong signal.

20-Dec-22, Tuesday:- 1500 UTC, 13539 kHz, "512 512 512 1", message, DK/GC "362 118" x 2, signal strength varying from weak to over S9.

1520 UTC, 12139 kHz, weak.

1540 UTC, 10239 kHz, (?), something there, very weak, difficult copy - thought it was going to be on 11239, fairly sure there was E07 way down in the noise on 10239.

23-Dec-22, Friday:- 1500 UTC, 13539 kHz, "512" and "362 118" again, weak signal.

1520 UTC, 12139 kHz, also weak. Nothing readable at 1540z on 10239.

E11 & E11a log Nov/Dec

S06

From PoSW:

First + Third Fridays in the Month Schedule:-

4-Nov-22:- 2000 UTC, 7672 kHz, “319 319 319 00000”, S5 to S6.

2100 UTC, 5457 kHz, much stronger, S9.

Same frequencies as used in January and February.

18-Nov-22:- 2000 UTC, 7672 kHz, calling “319” for a message, weak signal, DK/GC “720 720 51 51”, ended a bit before 2015 UTC.
2100 UTC, 5457 kHz, second sending much stronger signal. Not too many messages from this S06 schedule in recent months, looking back through the log the last occasion appears to be on 20-May of this year and before that, 19-November-2021.

A full messages means a repeat on the following day:-

19-Nov-22, Saturday:- 2000 UTC, 7672 kHz, weak signal, weaker than yesterday.

2100 UTC, 5457 kHz, also weaker, a couple of S-points down on yesterday's transmission.

Moved back by one hour in December:-

2-Dec-22:- 2000 UTC, 5457 kHz, “319 319 319 00000”, good signal, nothing readable from the first sending at 1900z on 7672, no doubt underneath the local RF noise QRM.

16-Dec-22:- 1900 UTC, 7672 kHz, very weak, could just about hear some “nulls”.

2000 UTC, 5457 kHz, “319 319 319 00000”, good signal.

Of the above transmissions Daniel writes, "This schedule has strong interference by a Chinese broadcasting Stn and the signal is too weak in my qth. Even the SDR RX in Japan is a mess.

Original Token in the Mojave Desert offered in reply: 'Note that the V07 transmissions on Dec 25, 2022, appear to have not happened. Even receivers located very near the transmitter showed no activity.
I searched for other frequencies, and times, that morning, but nothing heard.

Here's hoping this isn't yet another station down the pan!

- 1) Carrier up until 0944
- 2) Break between 0931 and 0932 UTC
- 3) Serdolik v2 on 20816 kHz at 1013 UTC
- 4) Fair QRM2 QSB2 in UK
- 5) Strong QRM2 QSB2 in UK
- 6) The code for Sophia was a mistake, it was supposed to send an X06b 111666 code instead as this was on an XPA2 schedule frequency (Specctre)
- 7) BC QRM3 QSB2 in UK
- 8) Weak QRM3 QSB3
- 9) Fair RTTYQRM3 QSB2

Many thanks to all contributors. I wish you a happy, healthy, success- and especially peaceful year 2023.

Good-bye till the next issue

Jochen Schäfer, Numbers-, X06 Database and Teamkopf

Spectre 3000 sent a theory about X06b transmissions:

Theory For X06b Transmissions 1 Hour Before XPA1, XPA2, E07 & XPB1 Schedules.

I do have some theories to why X06b transmissions happen on Russian Operator 7 number station transmissions, one hour before sending.

1 They are merely test transmissions.

2 They may identify the priority of the message before receiving. If this is true then a full 6 tone X06 would be classified as high priority, an X06b 3 tone variant would be classified as medium priority. And lastly an X06b 2 tone variant would be classified as low priority.

3 All Russian 7 Operator number station transmissions which do have an X06b transmission 1 hour before actual message, are targeted to Russian Embassies. Warning the Embassy that a transmission is going to happen, very much like the X06 6 tone Embassy targeted transmissions. As standard procedure.

4 All of the Russian 7 Operator number station transmissions which do not have an X06b transmission 1 hour before an actual message, are targeted to agents working in the field. They would be no need to have an X06b transmission for these messages, just the standard 10-minute test tone before message to let the agent know that they are transmitting. Since a few Russian 7 Operator transmissions appear to not have an X06b transmission 1 hour before the actual message.

In reply Jochen states:

To Spectre's theories I think, that the X06b transmissions 1 hour before the family Ib TXs are tests or introductions. The real 6 tone stations are informations to Russian embassies in the field, where we could find out most of the targets. These 6 tone stations are mostly followed by traffic in other modes like Serdolik.

Gizza Job!

```
1 import java.util.Arrays;
2 public class Job {
3     public static void main(String[] whatIKnow){
4         String[] languages={"JavaScript","C++","Java","Python"};
5         for(String language : whatIKnow){
6             if(Arrays.asList(languages).contains(language)){
7                 System.out.println("Apply here");
8                 System.exit(0);
9             }
10        }
11        System.out.println("Give it a go apply here");
12    }
13 }
```

 SECRET
INTELLIGENCE
SERVICE MI6

Looking for a new challenge?

We are the Secret Intelligence Service, also known as MI6. We work secretly around the world gathering intelligence to promote and protect the UK's interests and stay ahead of our adversaries. We have rewarding careers that rely on people with diverse backgrounds, skills and perspectives. If you are interested in different cultures, the prospect of travel and living overseas, enjoy working with others and building successful relationships, then we have a number of exciting flexible roles that may suit you.

We are looking for high potential candidates and offer a tailored training programme that will harness your skills and experience, enabling you to directly support the intelligence capability of the UK.

To work in SIS you must be a British citizen or hold dual British nationality and have been resident in the UK for at least 7 of the last 10 years. To find out more, please send your curriculum vitae and covering letter to:

Recruitment Department, PO Box 79503, London EC1P 1RY

Please do not disclose to anyone that you have contacted MI6. Doing so may mean that we cannot progress your application. Candidates will have to pass a vetting process.

Thanks 'E' for sending this, excellent!

Those tapes!

Anyone for Netflix 'The Crown' Series 5, to be correct? There's been a lot written about this latest series, a fiction allegedly, and its inaccuracies. I was surprised at the attempts by the producers to include the King Charles and Camilla aspect of the analogue intercept that made so much news once released by the media.

The amount of kit and the image of the intercepting listener was not good and neither were the technicalities. FRG-9600 receiver, Vector Phase unit, caravan, beer and heavens knows what else on the table top inside a caravan complete with 'amateur!' [Note Mr Reenan never held a call sign I'm told].

Screen grab looking inside caravan...see pile of cassettes.

Inside caravan

Tuning FRG-9600 Receiver [602MHz inside TV band not analogue Cellular band – 904 to 945MHz I believe]

The infamous taped phone call behind Squidgygate

It was a standard evening when a 23-minute phone call took place, containing chat so risqué it would rock the royal family to its core.

<https://www.news.com.au/lifestyle/real-life/true-stories/the-infamous-taped-phone-call-behind-squidgygate/news-story/74a4c6f27899e2b6317cf7e4866844ab>

“And so, darling, what other lows today?” a man can be heard asking.

“I was very bad at lunch and I nearly started blubbing,” a woman responds.

“I thought: Bloody hell, the things I have done for this f***ing family.”

And so starts a 23-minute tape, a tape containing such explosive content it would rock the royal family and shock the world. A tape clouded in claims of espionage.

It was New Year’s Eve in 1989 and Diana, Princess of Wales was at Sandringham with the extended royal family. The man on the other end of the line was James Gilbey, a Lotus salesman and heir to a gin fortune.

The duo had known each other for a decade, long before Diana had met Prince Charles. According to reports, the pair had been set to go out on a date when the dashing Gilbey stood her up. Enraged, Diana and one of her flatmates covered his Alfa Romeo in a flour and egg mix, Tina Brown writes in *The Diana Chronicles*.

Fast forward to 1989 and the duo were reintroduced, this time at the 30th birthday of a mutual friend.

By the end of the ’80s, Diana’s royal dream had long faded. Her marriage to Prince Charles was in tatters and since 1986 she had been enjoying an affair with her riding instructor, James Hewitt.

Quite what happened between Gilbey and Diana remains a mystery: Andrew Morton has called it a “dalliance” while Brown has pegged it as an “affair.” (Gilbey himself has denied they had an affair.)

No matter what the exact nature of their relationship was, thanks to an incredibly strange series of events, we know there was a definite intimacy between the two.

On that night in 1989, as the clock ticked down towards a new decade, Diana and Gilbey chatted away, ruminating on everything from their day to the young Princes to Gucci loafers. It is by turns moving and inane. But as they idly gossiped, something else, unbeknown to them, was going on. Someone, somewhere was listening and recording everything.

It was a fairly depressing New Year’s Eve for the most famous woman in the world. On December 31, Diana was at Sandringham, the red brick Georgian pile beloved by the Windsors’, where the royal family religiously spends the holidays. No popping champagne corks and fireworks for her.

On the tape, she can be heard telling a staff member that she would like dinner on a tray in her room. “Just some salad with yoghurt. Like when I was ill in bed. That would be wonderful — about eight o’clock,” she says. It is a dismal image: A princess stuck in icy Norfolk country manor forking up salad.

Gilbey, we know, was on his mobile phone, hundreds of kilometres away and headed out to a quite jolly-sounding dinner party for 30.

Throughout the course of their conversation, they chat about friends, such as Mara Berni, the famed owner of San Lorenzo restaurant, horoscopes and even Gilbey’s decade-old Gucci shoes. Essentially, it’s the sort of idle chatter one imagines two upper class chums might indulge in.

Then things get a bit lustier. They repeatedly make kissing noises at one another and plan for Gilbey to keep his mobile close at hand so they can stay in touch.

“Kiss me, please (sound of kisses). Do you know what I’m going to be imagining I’m doing tonight, at about 12 ‘o clock? Just holding you close to me. It’ll have to be delayed action, for 48 hours!” Gilbey says.

During the call, Gilbey calls Diana “darling” 53 times and “Squidgy” 14 times.

Later he tells her: “No, I haven’t played with myself, actually. Not for a full 48 hours.”

Meanwhile, in Oxfordshire, Cyril Reenan, a 70-year-old retired bank manager was out for the night. The ham radio enthusiast claimed on January 4, four days after Gilbey and Diana's scandalous chat, to have heard and recorded the conversation via his home set-up. Then, on January 8, he contacted The Sun, selling the tape for about \$10,000.

"We put the cassette in and listened to it almost mesmerised for 20 minutes," Stuart Higgins, the paper's then royal correspondent, has said. "The content was so explosive we knew we had a major, major story."

Higgins then approached Gilbey who "went completely white, got in his car, and drove off". "Clearly we had the right man," Higgins said.

Gilbey reportedly then told Diana and both knew that it was explosive stuff. The only question was when the story would break.

THE SECOND RECORDING

Reenan wasn't the only person who had heard the future Queen and the car salesman's intimate chitchat. Jane Norgrove, a 25-year-old typist, had also allegedly recorded the conversation from her home, which was only about 12km away from that of Cyril Reenan.

Supposedly, both Reenan and Norgrove had been able to inadvertently pick up the frequency of the phone call, though they made their recordings days apart.

Norgrove has said that she didn't listen to the tape for a year after she recorded it however by early 1991, copies had found their way to Richard Kay at the Daily Mail and the National Enquirer's London bureau.

(Despite having the bombshell tapes, The Sun had decided not to publish the information).

In August, 1992, the Enquirer broke the story in the US with British publications soon following suit.

The entire transcript of Diana and Gilbey's chatter was published and readers could even call up a special premium phone line to pay to listen to the audio.

Of all the places to be when the news broke, Diana was at Balmoral, the royal family's beloved Scottish pile and was "shattered," according to Brown. Others have suggested she was more embarrassed than anything, and her then-bodyguard Ken Wharfe later claimed that Diana herself had called the paid line to listen to her own conversation.

SPY GAMES

Squidgygate, as the scandal came to be known, was blown out of the water only a few months later in November 1992 with the publication of an accidentally intercepted (and taped) conversation between Prince Charles and Camilla Parker Bowles.

The Camillagate tapes hit the front page, with the truly gobsmacking revelation the future king had idly mused about being his beloved Camilla's tampon.

Both of these incidents could have been written off as nothing more than scurrilous chapters in the royal family's history if not for what happened 16 years later.

In 2008, during the inquest into Diana's death, her former protection officer Ken Wharfe claimed that Diana and Gilbey's tete-a-tete had actually been recorded by the British secret service and that it had then been broadcast on a loop with the hope a radio enthusiast might pick them up.

"Diana did say to me on a number of occasions she felt she and other members of the family were being monitored," Wharfe told the hearing. (He also alleged that the Queen had asked MI5 to look into the matter at the time.)

The Princess was not the only one who was worried about who might be listening into her calls. Diana reportedly told her friend, Harper's Bazaar editor Liz Tilberis that strange clicks and noises during phone calls were the secret service and another longtime friend had bought the Princess a scrambler for her phone.

There is also the unexplained question of how two amateur enthusiasts managed to capture the same conversation, several days apart, using unsophisticated technology.

John Nelson, a communications expert who had studied the Squidgygate tapes for the Sunday Times, has said that he believes that "the truth is, Diana's phone was bugged. That call had to have been recorded off a landline."

Which, in turn, means that someone had bugged Diana's phone line inside Sandringham, a royal residence, the implications of which are startling.

There is also evidence that the Squidgygate recording had been altered.

(However, it is believed that the Camillagate call was genuinely intercepted by hobbyists.)

The following year, Diana covertly hired electronic surveillance experts (as did Sarah Ferguson) to sweep her Kensington Palace apartment, getting them into the royal residence by having them pose as carpet fitters, the Telegraph has reported. Quite what they might have found, we will never know — when the four men tried to access the telephone exchange they were detained.
